UPON-TYNE.-NEW SERIES, VOL. III., PART 2

INVERTEBRATE > ZOOLOGY

Crustacea

THE CRUSTACEA OF NORTHUMBERLAND AND DURHAM

By Canon A. M. Norman, M.A., D.C.L., LL.D., F.R.S., and G. Stewardson Brady, M.D., LL.D., D.Sc., F.R.S.

THE CRUSTACEA OF NORTHUMBERLAND AND DURHAM

By Canon A. M. Norman, M.A., D.C.L., LL.D., F.R.S., and G. Stewardson Brady, M.D., LL.D., D.Sc., F.R.S.

There were no very early students of the Crustacea in these northern counties, and we are not aware of any publications on the subject prior to 1832. The following notes supply a record of all observations and papers up to the year 1862-4, at which time a stimulus was given to the study of this and other branches of Marine Zoology by grants from the British Association. These, with local contributions, enabled dredging to be carried out by means of a steam-tug in the deeper waters which lie off the coast. The earlier papers referred to are as follows:—

- Johnston (George), "Illustrations of British Zoology," Loudon's Mag. Nat. Hist., vol. v., 1832. p. 520; vol. vi., 1833, p. 40; vol. vii., 1834, p. 253; vol. viii., 1835, pp. 202, 494, 565, and 668; vol. ix., 1835, p. 80. These papers contained notices of the occurrence of various species of Isopoda, Amphipoda, and parasitic Crustacea, accompanied by illustrations.
- Johnston (George), Zoological Journal, vol. iii., 1827, p. 176.

 Gammarus maculatus and G. dubius.
- Johnston (George), Proc. Berwickshire Naturalists' Club, vol. i., 1834, "Catalogue of the Cirrhipeda found on the coast of Berwickshire"—6 species.
- Embleton (Robert), Proc. Berwickshire Nat. Club, vol. i., 1834, "List of Malacostracan Podophthalma found on the coast of Berwickshire and North Durham." Twenty-eight species are recorded, including description and figure of his new species Galathea nexa.

- Baird (W.), Hist. Berwickshire Nat. Club, vol. ii., p. 145 (1845?), "Arrangement of the British Entomostraca." In this paper are a few records from Berwick Bay.
- Baird (W.), Hist. Berwickshire Nat. Club, vol. ii. (1845?), Caligus Strömii described.
- Hardy (James), Hist. Berwickshire Nat. Club, vol. iv., p. 212 (1845?), Pagurus Prideauxii Leach. "Found in deep water off Burmouth, lodged in a curious domicile formed of a sponge (Halichondria suberea Johnston)." It seems probable that the species found was Pagurus cuanensis.
- Hancock (Albany), Trans. Tyneside Nat. Field Club, vol. i., 1850, and also Ann. and Mag. Nat. Hist., ser. 2, vol. iv., 1849, p. 305; pls. viii., ix., "Notice of the occurrence on the British coast of a Burrowing Barnacle belonging to a new order of the class Cirripedia." The species was named Alcippe lampas.
- Hancock (Albany), Trans. Tyneside Nat. Field Club, vol. iv., 1858, p. 17, and also Ann. and Mag. Nat. Hist., ser. 3, vol. ii., p. 443, describes the markings on the sand caused by the crawling of the two Amphipoda Sulcator arenarius and Kröyera arenaria; which Crustacea are described by Spence Bate in the Tyneside Transactions immediately before the paper by Hancock at p. 15, and figured pl. ii., figs. 1 and 2.
- Norman (A. M.), Trans. Tyneside Nat. Field Club, vol. iv., 1860, p. 326, pl. xvii., "On an undescribed Crustacean of the genus Mysis."
- Norman (A. M.), Trans. Tyneside Nat. Field Club, vol. v., 1860, p. 143, pl. iii., "On species of Ostracoda found in Northumberland and Durham, new to Great Britain."
- Hancock (Albany) and Norman (A. M.), Trans. Linn. Soc., vol. xxiv., 1863, p. 49, pls. xv., xvi., "On Splancnotrophus, an undescribed genus of Crustacea, parasitic in Nudibranchiate Mollusca." One of the two species, Splancnotrophus brevipes, had been taken on the Northumberland coast.

From this date, when the dredgings, aided by grants from the British Association, were commenced, the Crustacea of the north-east coast began to receive more attention.

The north-east coast of England is not favourable, at any rate in the littoral zone, to the development of the smaller marine animals; the swell which throughout so great a portion of the year beats on the rocky shores leaves little peace for the animals which should live there; while the almost total absence of sheltered bays or even nooks deprives the smaller Crustacea of suitable dwelling places. In years gone by Alder and Hancock made the rocks at Cullercoats famous by the number of interesting Nuclibranchiate Mollusca which they discovered there. It is to be feared that they would not have been so successful had they worked there at the present time; the immense increase of population which has taken place north of the entrance to the Tyne, the sewage poured into the water, the vast amount of dredged mud carried out from the Tyne and deposited off shore have greatly changed the condition not only of the shore but of the neighbouring sea from which the Nudibranchs used to make their way landwards at the time of spawning. The North Sea, however, in its deeper parts is excellent dredging ground, whence additions to our fauna have Leen continually turning up, and where excellent work remains to be done by those who come after us.

We give a comparative table of the Crustacea which have been found on the north-east coast, with those from such other parts of the coasts of Great Britain as have been efficiently worked to a greater or less degree.

The authorities who are responsible for the several columns are as follows:—

- Northumberland and Durham as in the Catalogue which follows.
- 2. "Notes on the Crustacea of the Channel Islands," Canon A. M. Norman, Ann. and Mag. Nat. Hist., ser. 7, vol. xx., 1907, p. 356.

- 3. "The Crustacea of Devon and Cornwall," Canon A. M. Norman and Thomas Scott, LL.D., 1906.
- 4. "Fourth and Final Report on the Marine Zoology,
 Botany, and Geology of the North Sea," Report Brit.
 Assoc., 1890, p. 457. In this report the higher
 Crustacea are reported on by Mr. A. O. Walker; the
 Ostracoda by Prof. G. S. Brady, Mr. A. Scott, and Dr.
 Chaster; the Copepoda by Mr. I. C. Thompson; and
 the Cirripedia by Mr. Marratt.
- 5. "Fauna, Flora, and Geology of the Clyde Area, 1901."
 The Crustacea are reported on by Thomas Scott,
 F.L.S., p. 328.
- 6. "A Catalogue of the Land, Freshwater, and Marine Crustacea found in the Basin of the River Forth and its Estuary," by Thomas Scott, LL.D., F.L.S., Proc. Roy. Physical Soc. of Edinburgh, vol. xvi., 1906, p. 97 and p. 267.
- 7. "Last Report of Dredging among the Shetland Isles."

 Crustacea by Rev. A. M. Norman, Brit. Assoc. Report
 (for 1868), 1869, p. 247. The marine species are filled
 in from this old report, as it is the only one of the
 fauna of the northern extremity of our Islands; a few
 additional species have since been discovered, but are
 not here included. The inland species, however, which
 have been observed by Dr. T. Scott and R. Duthie
 have been incorporated. The account of these will be
 found in Reports of the Fishery Board for Scotland,
 xiii., p. 174; xiv., p. 229; xv., p. 327; and xvi.,
 p. 253.

CRUSTACEA OF NORTHUMBERLAND AND DURWAM

Crustacea of Northumberland and Durham compared with those of some other parts of the country and seas:—

	Northumber- land and Durbam.	Channel Islan is, 1907.	Deven and Connwall, 1406.	Irish Sea, 1896.	Firth of Clyder, 1991.	Firth of Forth, 1906.	Sh 44m. 6. Marin. 4° 58, Inlami 111 5.
Anomura Macrura Schizopoda Stomatopoda Sympoda Isopoda	22 15 22 14 26 58 130	39 11 26 18 1 9 52 136	41 16 32 29 2 13 68 144	27 12 22 16 	29 16 27 25 - 31 62 168	19 15 18 26 — 21 44 145	18 17 20 11 — 12 23 113

	637	387	808	513	855	794	427

The character of the fauna of the coasts of Northumberland and Durham is distinctly boreal, and much more northern than that of the same latitude on our western shores. As long ago as 1868 one of us wrote, "The distribution of animal life around our coasts appears for the most parts to have followed the direction south, west, north, and east. It would seem that comparatively few (if any) southern species have made their way far north through the Straits of Dover, which may probably be accounted for by the fact that that channel has, geologically speaking, been only a short time open. As a rule southern species are to be seen at a higher latitude on the western than they are on the eastern coasts. There are, however, some apparent, but only apparent exceptions. These consist of animals known on the north-east coast of Scotland, which we should not have expected to meet with there. On examining into the probable cause of their migration to this district, I am led to believe that they have

made their way thither round the western and northern, and down the eastern coasts to their present habitat, and not up the eastern coast, as at first might have been supposed. For example Cerithium perversum, Phasianella pulla, Fissurella graca, Tellina balaustina, Callianassa subterranea, Palmipes placenta, Amphiura brachiata, &c., have been found in the Moray Firth, but are wholly absent on the east coast of England. Moreover many species have been recorded on the Norwegian coast though never found on the eastern shores of England, and therefore may be presumed to have migrated thither up the western side of Great Britain and round the north of Scotland; as examples of such species may be cited Pleurotoma striolata, attenuata and septangularis, Cerethiopsis tubercularis, Cerithium reticulatum and perversum, Rissoa violacea, Pholas dactylus, Solen vagina, Psammobia costulata, Gastrana fragilis, Isocardia cor, Cardium aculeatum, Lepton squamosum, Xantho rivulosus, Portunus arcuatus, Gebia deltura, &c. On the other hand, while northern forms do not extend southward on the east coast beyond Yorkshire and the Dogger Bank, on the western coast they in many instances have a range southwards to the Nymph Bank off Cork, and even to the Mediterranean Sea."*

Forty years have elapsed since the above was written, and a continued study during that time of the distribution of animal life in the North Atlantic has fully confirmed the views expressed by the writer in the foregoing extract. If rewritten now a few names therein quoted as Norwegian would be struck out as erroneously recorded; but the writer would on the other hand be able to add a large number of other species as illustrative of his views. Moreover he has during these years been able to establish a remarkable fact. It is that during the last months of the year, as also during the first months, that is apparently from November to March, enormous quantities of free swimming animals are often brought down from the north along the coasts of Scotland

^{*} Norman (A. M.) "Last Report of Dredging among the Shetland Isles," Rep. Brit. Assoc. (for 1868), 1869, p. 248.

and England; on many occasions as far as north Yorkshire. The species thus occurring are not known (or very rarely?) at other times of the year, and the conclusion the writer arrived at was that at the period of the year mentioned there was a strong southerly current sweeping along our east coast. The Arctic forms which peculiarly distinguish this southerly migration are Clione limacina Phipps, Thysanecssa longicaudata Kröyer, Nematoscelis borealis Norman, and Euthemisto compressa Goës.

These conclusions, arrived at on purely zoological grounds, have received remarkable confirmation during the last two or three years from the physical researches of the *International Council for the Exploration of the Sea*. By numerous and extended observations and experiments it has been clearly established that water which enters the North Sea through the Straits of Dover is very soon deflected from its northerly course, and flows eastwards to the continental portion of the area; and that on the other hand strong currents come from the north, along the western side of the channel; and not only so, but that the exact course of these southern-flowing waters, and also the amount of their salinity, varies at different seasons of the year.

The following Crustacea of the orders Brachyura, Anomura, and Macrura, so well known in the south of our islands, are wholly absent from the north-east coast of England:—

** Ebalia tumefacta Montagu.
Thia polita Leach.
Polybius Henslowi Leach.

* Portunus arcuatus Leach.

Bathynectes longipes Risso.

Xantho floridus Montagu.

* hydrophilus Herbst. Couchii Bell.

Pilumnus hirtellus Pennant. Nautilografsus minutus Linné.

^{*} The species in this list to which an * is prefixed have been recorded from the coast of Norway.

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

* Pinnotheres veterum Pennant.

Mamaia squinado Herbst.

Pisa tetraodon Pennant.

biaculeata Montagu.

Macropodia ægyptia H. M. Edwards.

Dromia vulgaris H. M. Edwards.

Pagurus sculptimanus Lucas.

Diogenes pugilator Roux.

Faxea nocturna Chiereghin.

Axius stirynchus Leach.

Arctus ursus Dana.

Palinurus vulgaris Latreille.

Penæus caramote Risso.

Crangon sculptus Bell.

Alpheus ruber H. M. Edwards.

macrocheles Hailstone.

Hippolyte Prideauxiana Leach.

Typton spongicola O. G. Costa.

On the other hand the only species belonging to these higher Crustacea which live on the northeast coast but are unknown in the south of England are:—

Lithodes maia Leach.

Pagurus pubescens Kröyer.

Anapagurus chiroacanthus Lilljeborg.

? Spirontocaris securifrons Norman.

Gaimardi H. M. Edwards.†

Pandalus borealis Kröyer.

We are much indebted to Professor A. Meek for records of Amphipoda and other Crustacea, and to Mr. R. S. Bagnall for the result of his researches among the terrestrial Isopoda; and also to Mr. R. A. Todd, who has added two important species to the local fauna, *Calocaris macandreæ* and *Pandalus borcalis*.

^{*} The species in this list to which an * is prefixed have been recorded from the coast of Norway.

[†]This species has not yet been found on the coasts of Northumberland and Durham, but may be expected to occur there, as Dr. Thomas Scott has recorded it from the Firth of Forth.

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

The following initials are employed to indicate different collectors in the following report:—

A. Mk=A. Meek.

A. M. N=A. M. Norman.

G. H=George Hodge.

G. S. B=G. S. Brady.

R. H=Richard Howse.

The letters N. and D. after species imply that they have been found on the ("N") Northumberland and ("D") Durham coasts.

CRUSTACEA

SUB-CLASS I.—DECAPODA Latreille

ORDER I.—BRACHYURA Lamarck

SECTION I.—OXYSTOMATA H. Milne-Edwards

FAM. I.—LEUCOSIADÆ

EBALIA TUBEROSA (Pennanti)=E. Pennantii Leach=E. insignis

Not uncommon in deep water off the coast.

N.D.

EBALIA CRANCHII Leach=E. discrepans Costa=E. Deshayesii Lucas=E. chiragra P. Fischer.

More common than the last off the north-east coast. N.D.

FAM. 2.—CORYSTIDÆ

Corystes cassivelaunus (Pennant).

The masked crab was repeatedly found by the late Mr. R. Howse cast up upon the strand in the neighbourhood of South Shields; common on the beach at Seaton Carew (G. S. B.); occasionally in great numbers in the bays of Northumberland (A. Mk.).

N.D.

Atelecyclus septembentatus (Mont.)=Atelecyclus heterodon Leach.

Occasionally found off our coasts in the coralline zone.

N.D.

SECTION II.—CYCLOMETOPA FAM. 1.—POLYBIIDÆ

PORTUMNUS LATIPES (Pennant)=Portumnus variegatus Leach.

Two specimens dead on the sands at Whitley (J. Hancock); thrown up in large numbers on the sands between Hartlepool and Black Hall Rocks, Sept., 1861 (A. M. N.). N.D.

FAM. 2.—PORTUNIDÆ Dana

PORTUNUS PUBER (Linné).

Neighbourhood of Embleton, Northumberland (R. Embleton). Cullercoats, presented by Mr. Henderson, fisherman (Newcastle Museum). Farne Islands, Newbiggin, Whitley, and not uncommon near the Longstone (A. Mk.).

Portunus corrugatus (Pennant).

"It has been found by Dr. Johnston in Berwick Bay, but is rare" (Bell, Brit. Crust., p. 96).

N.

Portunus depurator (Linné)=P. plicatus Risso.

"Occasionally brought from deep water in Embleton Bay, adhering to the nets of the fishermen" (R. Embleton). Sunderland, from trawlers (G. S. B.).

N.D.

PORTUNUS MARMOREUS Leach.

Occasionally met with in the same manner as the preceding (R. Embleton). As Mr. Embleton does not include *P. helsatus* in his list, it is not unlikely that that species may have been mistaken for the present one.

N.

PORTUNUS HOLSATUS (Fabricius)=P. dubius Rathke.

Frequent in 2–8 fathoms, and occasionally in rock-pools, Ryhope and Seaton Carew (G. S. B.)

D.

PORTUNUS PUSILLUS Leach.

Common in the coralline zone.

N.D.

FAM. 3.—CARCINIDÆ

CARCINUS MÆNAS (Pennant).

Everywhere on the coast.

N.D.

FAM. 4.—CANCRIDÆ

Cancer pagurus Linné=C. fimbriatus Olivi.

N.D.

PERIMELA DENTICULATA (Montagu).

A specimen, taken at Whitburn March 1845 by Rev. G. C. Abbs, was in Mr. John Hancock's collection.

D.

SECTION HI.—CATAMETOPA FAM. PINNOTHERIDÆ

PINNOTHERES PISUM (Linné).

The Pea-crab occurs on our coast chiefly in mussels, but has also been found in *Lavicardium norvegicum*. "By no means uncommon in the mussels obtained at Holy Island and also at Eyemouth" (R. Embleton). Whitburn, 1847, found by Rev. G. C. Abbs and in the collection of the late Mr. John Hancock. In mussels from the mouth of the Tees (G. H.). Druridge Bay (A. Mk.).

SECTION IV.—OXYRHYNCHA FAM. 1.—MACROPODIIDÆ

INACHUS DORSETTENSIS (Pennant) = Cancer scorpio Fabricius.

Not common, yet frequently met with in deeper water off the coast.

N.D.

INACHUS DORYNCHUS Leach.

This species seems to be more common than the last in the coralline zone, and has also occurred between tidemarks.

N.D.

Macropodia Rostrata (Linné)=Stenorhynchus phalangium Bell.

Frequent in deep water.

N.D.

Macropodia Longirostris (Fabricius) = Stenerhynchus tenuirestris Bell.

Much rarer than the last, Embleton Bay (R. Embleton); 25–30 fathoms off Seaham (G. H.); off Cullercoats and from Beadnell (A. Mk.).

N.D.

FAM. 2.—HYADÆ

Hyas araneus (Linné).

Common in the laminarian and shallower water of the coralline zone.

N.D.

Hyas coarctatus Leach.

Frequent in deep water.

N.D.

EURYNOME ASPERA (Pennant).

This is Eurynome scutellata Risso, Eurynome boletifera Costa, and Eurynome tenuicornis Malm.

Rather scarce, dredged off Holy Island in 1864 (A. M. N.). Off Seaham (G. H.). Not uncommon in deep water off the Durham coast (G. S. B.).

ORDER II.—ANOMURA FAM. 1.—LITHODIDÆ

LITHODES MAIA (Linné).

The Northern Stone Crab is captured in the trawls, and also brought in occasionally by the long line fishermen, who draw it up together with many other naturalist's "spolia opima" attached to their hooks.

N.D.

FAM. 2.—PAGURIDÆ

PAGURUS BERNHARDUS (Linné).

Very common.

N.D.

PAGURUS PUBESCENS Kröyer=Pagurus Thompsoni Bell.

Common in deeper water.

N.D.

PAGURUS CUANENSIS W. Thompson.

Rather rare off Northumberland in 1863 and 1864; 7-25 fathoms off Seaham Harbour (A. M. N.); off Ryhope 13-15 fathoms (G. S. B. and G. H.); off South Shields (R. H).

N.D.

Anapagurus Lævis (W. Thompson).

Off Berwick and other parts of Northumberland coast; and not uncommon in 25 fathoms about six miles off Seaham Harbour (A. M. N.)

N.D.

Anapagurus Hyndmanni (W. Thompson).

Off Berwick and other parts of the Northumberland coast (A. M. N.); 8-10 miles off Seaham Harbour (G. H.); 10-15 miles off Ryhope (G. S. B. and G. H.)

Anapagurus Chiroacanthus (Lilljeborg).

1855. Pagurus chiroacanthus, Lilljeborg, Hafs-Crustaceer vid Kullaberg i Skane. Ofvers. Kong. Vet.-Akad. Förh., Arg. 12, No. 3, 1855, p. 118.

1861. Pagurus ferrugineus, Norman, Contributions to British Carcinology. Ann. and Mag. Nat. Hist., ser. 3, vol. viii (p. 1 separate copy), October, pl. xiii., figs. 1–3.

1896. Anapagurus chiroacanthus, Bouvier, Les Pagurinés des Mers d'Europe. La Feuille des Jeunes Naturalistes, 3me série, 26me année, p. 8, figs. 40, 41.

Off Holy Island and Dunstanburgh, 1864 (A. M. N.) N.

FAM. 3.—PORCELLANIDÆ

Porcellana Platycheles (Pennant).

Common under stones between tidemarks.

D.N.

Porcellana Longicornis (Linné).

1857. Porcellana priocheles, Kinahan, Natural Hist. Review, vol. iv., Proc. of Societies, p. 84.

Common in similar situations to the last, and among the roots of *Laminaria*, and also dredged in 20-30 fathoms. N.D.

FAM. 4.—GALATHEIDÆ

GALATHEA STRIGOSA (Linné).

Seven inches long off Cullercoats (J. Hancock); common at Embleton (R. Embleton); Bamburgh (G. S. B.); Seaham (G. H. and A. M. N.)

GALATHEA SQUAMIFERA Leach.

Four and three-quarter inches long, Cullercoats (John Hancock); Berwick and Embleton (R. E.); South Northumberland (A. M. N.); Whitburn (G. S. B.); Seaham (G. H.) N.D.

GALATHEA NEXA R. Embleton.

Of this species, originally described by Mr. R. Embleton, three specimens were taken by him at Berwick and one in Embleton Bay. Whitburn, and in cods' stomachs at Hartlepool (A. M. N.); Seaham (G. H.); Skate Roads (A. Mk.)

ATHEA INTERMEDIA Lilliehoro.

Galathea intermedia Lilljeborg.

- 1851. Galathea intermedia, Lilljeborg, Norges Crustaceer. Ofers. K. Vet.-Akad., Förhand., p. 21.
- 1857. Galathea Andrewsii, Kinahan, Nat. Hist. Review, vol. iv., Proc. Soc., p. 157, as G. nexa, and p. 228, pl. xvi., figs. 8 a-d. as G. Andrewsii.
- 1861. Galathea Andrewsii, Kinahan, Brittannic Species of Crangon and Galathea. Trans. R. Irish Acad., vol. xxiv., p. 95, pl. xi., figs. ra, 1a, 9a, and pl. xii.
- 1869. Galathea intermedia, Norman, Last Report Dredging Shetland Isles, Brit. Assoc. Rep. for 1868, p. 264.
- 1882. Galathea Giardii, Th. Barrois, Cat. Crust. Podophth. et Echinodermes à Concarneau, p. 22, fig. 2.
- 1888. Galathea Parroceli, Gourret, Revis. Crust. Podopth. Marseille. Annales Mus. Marseille. Zool., p. 110, pl. vi., figs. 11-24.
- 1888. Galathea intermedia, J. Bonnier, Les Galatheidæ des Cotes de France. Bull. Sci. de France et Belgique, vol. xix., p. 44, pl. x., figs. 1, 2, pl. xi., figs. 1-14.

The paper last referred to gives full synonymy and descriptions of the European Galatheidæ.

Cullercoats (J. Alder); off Berwick and other parts of the coast of Northumberland, 1862-4 (A. M. N.); Whitburn (G. S. B); Seaham (G. II.).

GALATHEA DISPERSA Bate.

- 1858. Galathea dispersa, Bate, Jour. Linn. Soc. Zool., vol. iii., p. 3.
- 1862. Galathea dispersa, Kinahan, Brit. spec. Crangon and Galathea. Trans. R. Irish Acad., vol. xxiv., p. 99, pl. xiii.

- 1863. Galathea neva, Heller, Die Crustaceen des südlichen Europa, p. 191, pl. vi., fig. 4 (not fig. 3).
- 1888. Galathea dispersa, J. Bonnier, Galatheidæ des cotes de France. Bull. Sci. de France et Belgique, vol. xix., p. 68, pl. xiii., figs. 1–3.

Off different parts of Northumberland, 1862-4 (A. M. N.); Cullercoats (J. Alder); Seaham (G. H.).

MUNIDA BAMETIA (Pennant) = Munida rugesa Fabricius=
Munida Rondeletii Bell.

The date of Pennant's specific name is 1777, and that of Fabricius 1787.

Very large, eight inches long, Northumberland (J. Hancock); Cullercoats (J. Alder); Embleton, not uncommon (R. E.); frequent in deep water (A. M. N.); St. Mary's Island (A. Mk.).

ORDER III .- MACRURA

FAM. I.—CALLIANASSIDÆ

UPOGEBIA STELLATA (Montagu)=Gebia deltura Leach.

Two specimens are in the Newcastle Museum from the Northumberland coast (J. Alder): Whitburn (Mr. Abbs fide J. Hancock).

N.D.

FAM. 2.—CALOCARIDÆ

CALOCARIS MACANDREÆ Bell.

Dredged by Mr. R. A. Todd (International Fisheries Investigation), July 26, 1907, on mud in 57 fathoms E.N.E. of the Coquet Lighthouse.

N.

FAM. 3.—ASTACIDÆ

ASTACUS PALLIPES Lereboullet.

In the rivulets to the south of Berwick Bay (R. Embleton); the Pont near Ponteland, and near Beillington (John Hancock); tributaries of the Tyne, specimens in Newcastle Museum from Whittle Dene near Ovingham (E. L. Gill).

17

13

FAM. 4.—HOMARIDÆ

Homarus Gammarus (Linné).

Common. N.D.

NEPHROPS NORVEGICUS (Linné).

Taken abundantly by the trawlers off the coast. N.D.

FAM. 5.—CRANGONIDÆ

CRANGON TRISPINOSUS Hailstone.

A single specimen taken in the harbour at Holy Island in 3 fathoms, 1862 (A. M. N.); Whitburn sands, July, 1862 (G. S. B.).

CRANGON FASCIATUS Risso.

A single specimen dredged in shallow water within the Farne Islands in 1864 (A. M. N.)—but as the difference between this species and *C. neglectus* (G. O. Sars) was not recognised in 1864, the latter may have been mistaken for the former.

N.

CRANGON NEGLECTUS G. O. Sars.

Young specimens dredged in sandy bays of Northumberland (A. Mk.).

Crangon bispinosus (Hailstone).

Stomachs of haddock; 40–50 miles E. by N. from Tynemouth, 40 fathoms; off Berwick and off Durham coast, 1864 (A. M. N.).

N.D.

CRANGON VULGARIS (Linné).

In all sandy bays.

N.D.

CRANGON ALLMANI Kinahan.

1857. Crangon Allmani, Kinahan, Nat. Hist. Review, vol. iv., Proc. Societies, p. 80, and woodcuts.

1861. Steiracrangon Allmani, Kinahan, Brit. Species Crangon and Galathea. Trans. Roy. Irish Acad., vol. xxiv., p. 65, pl. iii.

Off Berwick in 26-46 fathoms, and off other parts of Northumberland and Durham, 1862-1864 (A. M. N.) N.D.

PONTOPHILUS SPINOSUS Leach.

Frequently taken in 1862-64 off the Northumberland coast, and also 20 miles E. by S. from Tynemouth in 35 fathoms (A. M. N.)

FAM. 6.—ALPHEIDÆ

Athanas nitescens (Montagu). Cullercoats (J. Alder).

1.

FAM. 7.—HIPPOLYTIDÆ

Spirontocaris securifrons (Norman).

1862. Hippolyte securifrons, Norman, Trans. Tyneside Nat. Field Club, vol. v., p. 267, pl. xii., figs. 1-7.

Off the coasts of Northumberland and Durham, frequent, 1862-64 (A. M. N.)

SPIRONTOCARIS PUSIOLA (Kröyer).

Cullercoats and off Northumberland, 1862-63 (A. M. N.); off Ryhope and Seaham (G. H.)

N.D.

HIPPOLYTE VARIANS Leach.

Cullercoats, Seaham, and Hartlepool; off Durham and Northumberland coasts, 1862-64 (A. M. N.); Newbiggin and Whitburn (G. S. B.); off Ryhope (G. H.)

FAM. 8.—PANDALIDÆ

PANDALUS BOREALIS Kröyer.

1835. Pandalus borealis, Kröyer, Naturhist. Tidssk., vol. ii., p. 255, and 1845, Anden Rækkes, vol. i., p. 461—Voyages en Scandinavie, &c., pl. vi., fig. 2 a-o. 1851. Pandalus borealis, Brandt (F.), Middendorff Siberiske Reise, vol. ii., p. 122.

- 1879. Pandalus borealis, Smith (S. I.), "Stalk-Eyed Crustacea Atlantic Coast of North America," Trans. Connect. Acad., vol. i., p. 86.
- 1899. Pandalus borealis, Sars (G. O.), "Account Postembryonic Development of Pandalus borealis," Rep. Norweg. Fishery and Marine Investigations, vol. i., pls. i-x.

Mr. R. A. Todd has added this very fine Macruran to our fauna. About twenty specimens were taken by the "Huxley" on a muddy bottom in 57 fathoms E.N.E. of the Coquet Light, July 26, 1907, in company with *Ukko Turtoni, Calocaris macandreæ*, *Spirontocaris securifrons*, &c.

Pandalus borealis has a wide circumpolar distribution. It is found in the Arctic seas from Greenland in the west to the Kara Sea and Murmar coast in the east. It is met with on the Norwegian coast, and as far south as the Kattegat; on the north-east coast of America as far south as Massachusetts Bay; and in the Pacific off the Island of Unalaska and in the Sea of Okhotsk.

N.

Pandalus Montagui Leach=P. annulicornis Leach.
Common.

N.D.

PANDALINA BREVIROSTRIS (Rathke).

- 1843. Pandalus brevirostris, Rathke, Beiträge zur Fauna Norwegens, p. 17.
- 1850. Pandalus Feffreysii, Bate, Notes Fauna of Swansea, Appendix, pl. iv., fig. 2, and 1859, Nat. Hist. Review, vol. vi., Proc. Soc., p. 100, fig. 1.
- 1853. Hippolyte Thompsoni, Bell, Brit. Stalk-eyed Crustacea, p. 290.
- 1861. Pandalus Thompsoni, Norman, Contrib. British Carcinology. Ann. and Mag. Nat. Hist., ser. 3, vol. viii., p. 7 (separate copy), pl. xiv., figs. 3-9.
- ? 1862. Pandalus Rathkei, Heller, Untersuchungen Litoralfauna Adriatischen Meeres. Sitzungsb. K. Akad. Wissensch., vol. xvi., p. 441, pl. iii., fig. 31.

- ? 1863. Pandalus brevirostris, Heller, Crustaceen des südlichen Europa, p. 247, pl. viii., fig. 9.
- ? 1883. Pandalus brevirostris, A. Milne-Edwards, Recueil de figures de Crustaces nouveaux ou peu connus.
 - 1899. Pandalina brevirostris, Calman, On the British Pandalidæ. Ann. and Mag. Nat. Hist., ser. 7, vol. iii., p. 37, pl. i-iv., fig. 4.

We do not feel sure that the species figured by Heller and A. Milne-Edwards is the same as that of Rathke; the spines on the underside of the rostrum are represented as of much larger size than those which characterize the latter species.

In dredgings off Northumberland and Durham, 1862-64 (A. M. N.); Seaham, 22 fathoms (G. S. B.); Ryhope, 10-15 fathoms (G. H.)

N.D.

FAM. 9.—PALÆMONIDÆ

PALÆMON SERRATUS (Pennant).

A specimen in the British Museum from Berwick presented by Dr. Johnston (see List Specimens of British Animals in Brit. Mus. Crustacea. 1856, p. 42).

PALÆMON SQUILLA Leach.

N.D.

PALÆMONETES VARIANS (Leach).

Port Clarence and Hartlepool (A. M. N.); Hylton Dene (G. S. B.)

ORDER IV.—SCHIZOPODA

The following works may be consulted with respect to the Mysidea.

- 1. Sars (G. O.). Carcinologiske Bidrag til Norges Fauna.
 - Monographi over Mysider, pts. i. and ii., Det. Kongl. Norsk. Videnskabss. i Trondhjem, 1870-2, and pt. iii., Universitets-Program. Christiania, 1879.

- 2. Sars (G. O.). Nye Bidrag til Kundskaben om Middelhavets Invertebratfauna, I. Middelhavets Mysider (Archiv for Mathem. og Naturvid., 1876).
- 3. Norman (A. M.). British Schizopoda of the Families Lophogastridæ and Euphausiidæ (Ann. and Mag. Nat. Hist., ser. 6, vol. ix., 1892, p. 454), and British Mysidæ, a family of Crustacea Schizopoda (Ann. and Mag. Nat. Hist., ser. 6, vol. x., pp. 143 and 242).

A description of all British species known up to 1892 is to be found in these last papers.

SECTION I.—EUPHAUSIACEA FAM. 1.—EUPHAUSIIDÆ

Thysanoessa longicaudata (Kröyer).

- 1849. Thysanopoda longicaudata, Kröyer, Voyages en Scandinavie etc., Crust., pl. viii., fig. 1 a-f.
- 1882. *Thysanoessa tenera*, G. O. Sars, "Oversigt af Norges Crust. I." (Christ. Vidensk. Forhand.), p. 53 (separate copy), pl. i., figs. 18, 19.
- 1887. Thysanoessa longicaudata, H. J. Hansen, Overs. over det vestlige Grönlands Fauna af malak Havskrebsdyr (Vidensk. Middel. fra den naturf. Foren. i Kjobh.), p. 54 (separate copy).
- 1892. Thysanoessa longicaudata, Norman, Ann. and Mag. Nat. Hist., ser. 6, vol. ix., p. 463, and "The Naturalist," 1892, p. 175.

In "The Naturalist," May, 1892, Mr. Thomas H. Nelson wrote (p. 144) describing what he observed off Redcar, "Feb. 10th, 11th, and 12th, attracted by the number of Kittiwakes (Rissa tridactyla) to be seen about a mile out at sea, I procured a boat, and went off to ascertain the cause of this vast assemblage of gulls. Both east and west, as far as the eye could reach, their graceful white forms were visible, many busily engaged dipping into the water, and others flying overhead and then darting down to pick up some object from the surface. I shot two or three examples, and found that their

mouths were full of small Crustaceans, with which the sea was literally alive: heaps of these were afterwards washed ashore by sea-winds, and afforded a feast for starlings and other frequenters of the tidal line."

Mr. Nelson sent to me a'small bottle of the specimens from the shore for identification. The mass was composed of Euthemisto compressa; but there were also several examples of Nematoscelis borealis Norman, and one of Thysanoessa longicaudata Kröyer. Mr. Nelson would seem from his description to have seen the Kittiwakes feeding on these Crustaceans off the Durham coast, but at any rate it is certain that these Crustacea came from the north, down the Northumberland and Durham coasts, before they reached the spot where they were cast up upon the strand in the extreme N.E. of Yorkshire. They may be included therefore as occasional visitants off our coasts (A. M. N.)

NEMATOSCELIS BOREALIS (Norman).

- 1872. Thysanoessa borealis, Norman, in Sim (G.), "Stalk-Eyed Crustacea N.E. Coast of Scotland" (Scottish Naturalist), p. 8 (separate copy).
- 1882. Nematoscelis megalops, G. O. Sars, Prelim. Notices of Schizopoda of "Challenger" Exped. (Christ. Vidensk. Forhand.), p. 27 (separate copy).
- 1885. Nematoscelis megalops, G. O. Sars, Report "Challenger" Exped. Schizopoda, p. 127, pl. xxiii., figs. 5–10, pl. xxiv.
- 1892. Nematoscelis megalops, Norman, Ann. and Mag. Nat. Hist., ser. 6, vol. ix., p. 464.

In my notes in the last-named paper I have referred to some slight differences which appear to exist between the British specimens and that figured by Sars, and should those differences be not truly specific my name N, berealls can be adopted. For the occurrence of this species on our coast see notes on the preceding species considering that there were the remains of several specimens of this species in the very small amount of material which I examined, it would seem to have occurred in great profusion off our coast (A. M. N.)

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

Off Seaham Harbour in 5-8 fathoms (G. H., 1861, and A. M. N., 1863); 20-30 miles off Newbiggin in about 40

^{*} See notes on this in Norman and Scott, "Crustacea of Devon and Cornwall," 1906, p. 31.

fathoms, and in several dredgings off Souter Point in 21-39 fathoms (G. S. B.)

DIASTYLIS BRADII Norman, Plates viii., ix.

1879. Diastylis Bradii, Norman, Crustacea Cumacea of the "Lightning," "Porcupine," and "Valorous" Expeditions, Ann. and Mag. Nat. Hist.. ser. 5, vol. iii., p. 57.

1888. Diastylis Bradii, A. O. Walker, Proc. Biol. Soc. Liverpool, vol. ii., p. 178, pl. xii., figs. 10, 11.

Female.—Body moderately robust; carapace with dorsal margin little arched, the depth not very unequal throughout, about equal in length to the free segments of the trunk; anterior portion of body subequal in length to the tail exclusive of the telson. Carapace with the lateral margin minutely serrated throughout almost its entire length; surface beset with spines of very small and subequal size; these minute spines are in certain places arranged in regular lines, and thus become more conspicuous and map out the carapace into areas. These lines of spines are chiefly as follows: an arched row situated about the middle of the length of the carapace passes from the lateral margin with a curve to the dorsal line in front of this another row passing upwards from the lateral margin bifurcates, the hinder branch passing round the back of the stomachic region; the other branch is directed forward to the rostrum, just before the extremity of which it dies out. There are also two transverse rows which cross the back of the stomachic region.

The anterior free segments of the trunk have their front dorsal margin minutely crenulated; the last segment is rather widely separated from the preceding, and has its anterior margin cut into teeth which alternate with conspicuous plumose setæ; the epimera of this segment are in both sexes produced backwards into large acute processes.

The tail has a series of small spines on the lower lateral margin of the segments. The antennæ reach beyond the rostrum by the length of the last very long joint of the peduncle; flagellum as long as the last joint of the peduncle;

shorter flagellum small, equal in length to first joint of the longer flagellum.

The first feet have their basal joint spinose all over, and the basal joint of the palp is also spinose; the penultimate and antipenultimate joints are subequal, and the last joint nearly as long as the preceding. The basal joint of all the following feet is also spinose, but not so strongly as that of the first pair.

The telson has about 14–19 spines on each side. Uropods with 20–25 spines on the peduncle; inner branch with first joint bearing 9–11 spines on the inner margin; the second 3–4, the third 3–6 and terminal spines. Length, 11–12 mills.

The adult *male* has the raised line which in that sex commonly occupies a longitudinal position on the side of the carapace only slightly developed, and it is not until a high power of the microscope is used that it is seen to bear very minute spines. The legs are very spiny. The upper and lower lateral margins of the segments of the tail are strongly spined. The telson has only about nine slender spines on each side; it equals in length the peduncle of the uropods.

This species was first dredged by the "Porcupine" in 1869 in 15 fathoms in Lough Swilley, Co. Donegal. Mr. A. O. Walker has taken it in the Irish Sea. A. M. N. has found it to be not uncommon at Plymouth.

On the Durham coast it was dredged in shallow water off Seaton Carew (A. M. N.)

1869. Cumella agilis, Norman, Last Report Dredging Shetland, Brit. Assoc. Rep. for 1868, p. 272 3.

1878. Cumella pygmæa, G. O. Sars, Nye Bidrag tel Kundskaben Middelhavets Invertebratfauna, II., Middelhavets Cumaceer, Archiv. f. Mathem. og Naturvid., p. 146, pls. l.-li. 1900. Cumella pygmæa, G. O. Sars, Crust. Norway, iii. Cumacea, p. 81, pl. lv.

Newbiggin and Seaham (A. M. N.); off Whitley and off Sunderland (G. S. B.)

CAMPYLASPIS RUBICUNDA (Lilljeborg).

1852. Cuma rubicunda, Lilljeborg, Hafs-Crustaceer vid Kullaberg. Ofvers. Kongl. Vet. Akad. Förhand., p. 121.

1864. Campylaspis rubicunda, G. O. Sars, Om en aberrante Krebsdyrgruppe Cumacea, Vid. Selsk. Forhand., p. 77.

1900. Campylaspis rubicunda, G. O. Sars, Crust. Norway, iii. Cumacea, p. 84, pls. lvi., lvii.

Off Souter Point, 39 fathoms, and off Hawthorn, 25 fathoms (G. S. B.)

Campylaspis glabra G. O. Sars.

1878. Campylaspis glabra, G. O. Sars, Nye Bidrag til Kundskaben om Middelhavets Fauna, II., Middelhavets Cumaceer, Archiv. f. Mathemat. og Naturvid., p. 129, pls. xliv.—xlvii.

1900. Campylaspis glabra, G. O. Sars, Crust. Norway, iii. Cumacea, p. 86, pl. lviii.

About 30 miles off Alnmouth in 39 fathoms; 5–6 miles off Souter Point, 30 fathoms; off Marsden, 28 fathoms (G.S.B.)
N.D.

CAMPYLASPIS COSTATA G. O. Sars.

1864. *Campylaspis costata*, G. O. Sars, Om den aberrante Krebsdyrgruppe Cumacea, Vid. Selsk. Forhand., p. 79.

1894. Campylaspis costata, Norman, A Month on the Trondhjem Fiord, Ann. and Mag. Nat. Hist., ser. 6, vol. xiii., p. 277, pl. xii., fig. 9.

1900. Campylaspis costata, G. O. Sars, Crust. Norway, iii. Cumacea, p. 87, pl. lx.

About 30 miles off Alnmouth, 39–59 fathoms; and off Souter Point, 39 fathoms (G. S. B.) N.D.

[Leucon nasicoides and Dactylopsis resima were recorded (Nat. Hist. Trans. North., Dur., and Newcastle, vol. xiv., p. 94) by mistake from the coast].

ORDER VI.—ISOPODA Latreille

The arrangement and nomenclature here employed is that of G. O. Sars' Account of the Crustacea of Norway, vol. ii., Isopoda, 1896–1899. Where necessary, however, references are given.

SECTION I.—CHELIFERA G. O. Sars FAM. 1.—TANAIDÆ

TANAIS CAVOLINII H. Milne-Edwards.

- 1828. Tanais Cavolinii, H. Milne-Edwards in Audouin et Milne-Edwards, Précis d'Entomologie, vol. i., pl. xxxi., fig. 2.
- 1840. *Tanais Cavolinii*, H. Milne-Edwards, Hist. Nat. des Crustacés, vol. iii., p. 141, pl. xxxi., fig. 6.
- 1842. Tanais tomentosus, Kröyer, Naturhist. Tidsskrift, vol. iv., p. 183; and Voyages en Scandinavie, &c., pl. xxvii., fig. 2.
- 1843. Crossurus vittatus, Rathke, Beitrag zur Fauna Norwegens, p. 35, pl. i., figs. 1-7.
- 1866. Tanais vittatus, Bate and Westwood, vol. ii., p. 125.
- 1875. Tanais vittatus, Macdonald, External Anatomy of Tanais vittatus, &c. Trans. Linn. Soc., Zool., ser. 2, vol. i., p. 67, pl. xv.
- 1896. Tanais tomentosus, G. O. Sars, Crust. Norway, ii. Isopoda, p. 12, fig. 15.
- 1897. Tanais Cavolinii, A. Dollfus, Note Prelim. Tanaida de l' "Hirondelle." Bull. Soc. Zool. France, vol. xxi., p. 207.
- 1898. Tanais Cavolinii, A. Dollfus, Campagnes de la "Melita," Tanaidæ. Mem. Soc. Zool. France, vol. xi., P. 35.
- 1899. Tanais Cavolinii, Norman, Ann. and Mag. Nat. Hist., ser. 7, vol. iii., p. 332.
- In 1866 G. O. Sars (Nye Bidrag til Kundskaben om Middelhavets Invertebratfauna, iii. Middelhavets Saxisopoder, Archiv. f. Mathemat. og Naturvid., p. 312, pl. ix., figs. 1-3)

described the Tanais which has four-jointed uropods under the name Tanais Cavolinii Milne-Edwards; but A. Dollius has shown that Milne-Edwards' species is that which has three-jointed uropods, and must take precedence of the synonyms given above. To a four-jointed uropod species A. Dollfus has given the name A. Chevreuvi; and this would seem to be T. Cavolinii G. O. Sars. The present species is also Tanais hirticaudatus of Bate.

Berwick Bay (Dr. G. Johnston): Cullercoats (G. S. B.). N.

TANAISSUS LILLJEBORGH (Stebbing).

- 1891. Leptognathia Lilljcborgii, Stebbing, "Sessile-Eyed Crustacea." Ann. and Mag. Nat. Hist., ser. 6, vol. viii., p. 325. pl. xvi.
- 1897. Leptognathia crassimana, Dollfus (A.), Campagnes de la "Melita," Tanaidæ. Mem. Soc. Zool. France, vol. xi., p. 46 &.
- 1906. Tanaissus Lilljeborgii, Norman and Scott, "The Crustacea of Devon and Cornwall," p. 34, pl. i., figs. 1-7.

Off North Sunderland and Seaton Carew in 4 fathoms (G. S. B.).

N.D.

LEPTOGNATHIA FILIFORMIS (Lilljeborg).

Off Northumberland coast between St. Mary's Island and Souter Point, 1904 (G. S. B.)

N.

LEPTOGNATHIA BREVIREMIS (Lilljeborg).

In the same dredgings as the last (G. S. B.)

N.

LEPTOGNATHIA LONGIREMIS (Lilljeborg).

With the two preceding species (G. S. B.)

LEPTOGNATHIA BREVIMANA (Lilljeborg).

About 30 miles off Alnmouth in 57 fathoms, and 5-6 miles off Souter Point in 30 fathoms, both ξ and γ (G. S. B.) N.

[Bate and Westwood record Apsendes Latreillii from Northumberland from A. M. N. It was a lapsus on their part. The specimen sent to them was labelled "Moray Firth."]

SECTION II.—FLABELLIFERA G. O. Sars FAM. 1.—GNATHIIDÆ

GNATHIA MAXILLARIS (Montagu).

This is Anceus maxillaris & and Praniza caruleata Q of Bate and Westwood; but not Gnathia maxillaris of G. O. Sars (see Norman and Scott's "Crustacea of Devon and Cornwall," 1906, p. 36, pl. ii., figs. 1–8).

Not rare off the coasts of the two counties.

N.D.

FAM. 2.—ÆGIDÆ

ÆGA PSORA (Linné).

A specimen taken off the N.E. coast is (or was) in the Newcastle Museum. N.(D?)

ÆGA MONOPHTHALMA Johnston.

1834. Æga monophthalma (larger form), Johnston, Loudon's Mag. Nat. Hist., vol. vii., p. 233, figs. a, b.

Johnston procured three specimens attached to a large codfish taken in Berwick Bay. One of these specimens is in the British Museum, "Berwick Bay (on codfish), presented by Dr. G. Johnston"; another specimen is in the British Museum, "Northumberland, presented by R. Howse, Esq."; a third specimen is in the Newcastle Museum labelled "Presented by W. Hutchenson, Whitburn"; a fourth specimen was procured by Mr. G. Abbs at Whitburn, and came into the possession of Mr. A. Hancock, who gave it to A. M. N.

ÆGA STRŒMII Lütken.

- 1834. Æga monophthalma (smaller form), Johnston, Loudon's Mag. Nat. Hist., vol. vii., p. 233, fig. c.
- 1843. Æga bicarinata, H. Rathke, Beit. zur Fauna Norwegens, p. 25, pl. vi., figs. 1–18 (but not Æga bicarinata Leach).
- 1858. Æga Stræmii, Lütken, Vid. Medd. Nat. For. Kjobenhavn, p. 68, pl. i. a, figs. 6-8.
- 1906. Æga Stræmii, Norman and Scott, "Crustacea of Devon and Cornwall," p. 38, pl. viii., figs. 9, 10.

In £ga bicarinata Leach the eyes are widely separated, in £ga Stræmii they meet each other. Bate and Westwood (vol. ii., p. 281) erroneously regarded the £ga monophthalma, smaller form, as a variety to Æga tridens Leach.

A specimen is in A. M. N.'s collection which was taken at Whitburn, May 18, 1849, by Mr. Abbs, and given to Mr. Hancock, who kindly added it to A. M. N.'s collection. A second specimen is in the Newcastle Museum. Bate and Westwood (vol. ii., p. 280) erroneously referred the Whitburn specimen above-named, which was sent to them for their use, to Æga bicarinata.

SECTION III.—VALVIFERA G. O. Sars FAM. I.—IDOTEID. E

IDOTEA BALTHICA (Pallas)= I. tricuspidata Bate and Westwood. For synonyms see G. O. Sars' Crust. Norway, vol. ii., Isopoda. Frequent on and off the coast in shallow water.

IDOTEA NEGLECTA G. O. Sars.

Two quite young specimens, only 4 millims. long, appear to be referable to this species. Cullercoats (G. S. B.)

IDOTEA GRANULOSA Rathke.

1843. Idolea granulosa, H. Rathke, Beit. z. Fauna Norwegens, p. 23.

1895. Idotea marina, A. Dollfus, Les Idoteidæ des cotes de France, Feuille des Jeunes Naturalistes, ser. 3, 25 année, p. 7, fig. 22.

1897. Idothea granulosa, G. O. Sars, Crust. Norway, ii. Isopoda, p. 82, pl. xxxiv., fig. 1.

Hartley, tidemarks, common (A. M. N.)

Dr. Brady has also found this species in one or two places on the coast, and it is doubtless common between tidemarks, but has been confounded with *I. balthica*. N.D.

IDOTEA EMARGINATA (Fabricius).

Seaham (A. M. N.): Roker and Whitburn from fishing boats (G. S. B.)

N.D.

IDOTEA LINEARIS (Linné).

Seaham in 10 fathoms, 1861 (G. H.)

D.

Professor Sars has changed the usual spelling of this genus *Idotea* to *Idothea*. Such a change is not desirable, first because Fabricius spelt his genus *Idotea**, and secondly because there is a genus *Idothea* among the Mollusca.

FAM. 2.—CIROLANIDÆ

EURYDICE PULCHRA Leach.

Occasionally taken in the tow-net in sandy bays near shore. It seems to be more gregarious in habits than are the more recently described species of the genus, which moreover are usually found in deeper water.

N.D.

FAM. 3.—LIMNORIIDÆ

LIMNORIA LIGNORUM (Rathke).

A very elaborate paper was published in 1893 by Dr. P. P. C. Hoeck on the structure of this species, and on the damage done by it in Holland†. It is common on the Northumberland and Durham coasts, and often does much injury to piles, etc.

N.D.

FAM. 4.—ARCTURIDÆ

ASTACILLA LONGICORNIS (Sowerby).

The Arcturus gracilis of Goodsir and of Bate and Westwood is the male of this species.

Not uncommon off the coast.

N.D.

ASTACILLA INTERMEDIA (Goodsir).

1841. Arcturus intermedius, H. Goodsir, Edinb. New Philos. Jour., vol. xxxi., p. 309, pl. vi., figs. 1-3.

1867. Arcturus intermedius, Bate and Westwood, Brit. Sessile-eyed Crustacea, vol. ii., p. 271.

* It is curious that Fabricius (Ent. Syst. Supp., 1798) in the body of his work pells his genus Idotea, but in the index it appears as Idothea.

† Report der Commissie uit de Koninklige Akademie von Wetenschappen. Limnoria lignorum. Amsterdam, 1893. 1869. Arcturus affinis, G. O. Sars, Nye Dybvands-crustaceer fra Lofoten. Chr. Vid. Selsk. Forh., p. 163 (p. 19 separate copy).

1897. Astacilla affinis, G. O. Sars, Crust. Norway, vol. ii., Isopoda, p. 90., pl. xxxvii., fig. 2.

Dr. Henderson has recorded the occurrence of this species in the Firth of Forth, which is the locality whence the types of Goodsir came; he writes, "N.E. of Inchkeith in the Firth of Forth, April, 1884, attached to spines of *Echinus esculentus*. Colour pale white, transparent, the distal end of joints of antenna banded with green; green bands (faint) on anterior segments of body." This observation is interesting in connection with the fact that this Astacilla was taken in considerable numbers near the Farne Islands in 1863 clinging to the test of *Strongylocentrolus drobachiensis* (Müller). The year previously this species had been taken off Tynemouth (A.M.N.)

Arcturella dilatata G. O. Sars.

Souter Bank in 39 fathoms, and 32 miles E. of Almmonth in 40 fathoms (G. S. B.)

SECTION IV.—ASELLOTA

FAM. I.—ASELLID.Æ

ASELLUS AQUATICUS (Linné).

In lakes and streams.

N.D.

FAM. 2.—JANIRIDÆ

JANIRA MACULOSA Leach.

In the coralline zone, not rare.

N.D.

JERA MARINA (Fabricius).

This is Færa albifrons of Bate and Westwood. It is common under stones between tidemarks.

N.D.

FAM. 3.—MUNNIDÆ

Munna Limicola G. O. Sars.

Off Scaham Harbour (G. H.); 21 miles off Souter Point in 21 fathoms (G. S. B.); Bate and Westwood (vol. iv., p. 328)

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

refer some Munna which A. M. N. sent them from Cullercoats and Seaham to Munna Krayeri; but as far as the Seaham specimens were concerned certainly erroneously (A. M. N.)
D.

Munna Fabricii Kröyer.

Thirty-four miles E. of Alnmouth in 39 fathoms, and off Souter Point in the same depth (G. S. B.)

N.D.

PARAMUNNA BILOBATA G. O. Sars.

Twenty-nine miles E. of Alnmouth, 59 fathoms; and 5-6 miles off Souter Point in 50 fathoms (G. S. B.)

N.D.

PLEUROGONIUM RUBICUNDUM G. O. Sars.

Two and a half miles off Souter Point, 21 fathoms; off Marsden 30 fathoms, and off Sunderland in 40 fathoms (G. S. B.)

PLEUROGONIUM SPINOSISSIMUM G. O. Sars.

1899. Pleurogonium spinosissimum, Th. Scott, "Report Marine and Freshwater Crustacea from Franz-Josef Land." Jour. Linn. Soc., Zool., vol. xxvii., p. 67, pl. iii., fig. 15.

A half-grown specimen apparently referable to this species, but with characters not fully developed, dredged off Souter Point. The metasome is as in Scott's figure, more contracted distally and more pointed at the extremity than in the figure given by Sars (G. S. B.)

N.

PLEUROGONIUM INERME G. O. Sars.

Dredged in about 25 fathoms off Northumberland coast between St. Mary's Island and Souter Point, 1904 (G. S. B.)

N.

FAM. 4.—MUNNOPSIDÆ

PSEUDARACHNA HIRSUTA G. O. Sars.

Twenty-nine miles E. of Alnmouth, 59 fathoms, and off Souter Bank, 39 fathoms (G. S. B.)

N.D.

EURYCOPE MUTICA G. O. Sars.

Twenty to thirty miles E. of Alnmouth in 50-60 fathoms (G. S. B.)

SECTION V.—SPHÆROMIDEA

SPHÆROMA RUGICAUDA Leach.

Wansbeck, Seaton Sluice, Hartlepool, Port Clarence (A. M. N.); Hylton Dene (G. S. B.) N.D.

SECTION VI.—ONISCOIDEA

Mr. R. S. Bagnall, of Winlaton-on-Tyne, has during the last two years worked at this tribe energetically and with great success. He has kindly placed the results of his investigations at our disposal.

FAM. I.-LIGHDÆ

LIGIA OCEANICA Linné.

Rocks, at and above high-water mark, common. N.D.

FAM. 2.—TRICHONISCID.E.

TRICHONISCUS PUSILLUS Brandt.

This species, which is the *Philourgria riparia* Bate and Westwood, is frequent among damp leaves and moss. N.D.

VAR. VIOLACEUS Schöbl?

1861. Trichoniscus violaceus, Schöbl, Korysi stejnonozi (Crustacea Isopoda) ohledem na rody a druhy v Cechách se nalézající (Ziva. Casopis Prérodnicky, p. 310, V. Praze).

Mr. Bagnall writes of the Trichoniscus here referred to, "It is always met with in exceedingly moist situations, and in its movements differs from T. pusillus. It was first met with by Mr. Gill and myself in the moss of a waterfall, and among refuse at the foot of the same over which water continually drops, at Gibside; and subsequently it was found at another waterfall in Gibside. Also a single specimen from a well in a garden at Winkaton; and others from under stones in a small stream at Scaur Banks, near Winkaton Mill; and under stones in a similar situation at Hart, near Hartlepool." It was also taken a great many years ago by A. M. N. in a very damp

situation by the side of the stream which runs into Seaton Sluice, Northumberland. Under stones on the sea banks at Fulwell and Ryhope (G. S. B.)

N.D.

TRICHONISCUS PYGMÆUS G. O. Sars.

- 1898. Trichoniscus pygmæus, G. O. Sars, Crust. Norway, vol. ii., Isopoda, p. 162, pl. lxxii., fig. 2.
- 1906. Trichoniscus pygmæus, Bagnall (R. S.), Ann. and Mag. Nat. Hist., ser. 7, vol. xviii., p. 474.
- 1907. Trichoniscus pygmæus, Bagnall (R. S.), Ann. Soc. Royale Zoologique et Malacologique de Belgique, xlii., pp. 263–266.

Gardens at Winlaton, where it is common; Gibside, Ravensworth, Egglestone-in-Teesdale; in flower-pots at South Hylton; and in Northumberland in gardens, Leazes Park and Hancock Museum grounds, Newcastle; Butcher Hill, near Matfen; Wylam, and Alnwick. Mr. Bagnall, who gives all the foregoing localities, adds "I have found it on several occasions away from cultivated ground."

TRICHONISCUS STEBBINGI Patience.

- 1907. Trichoniscus Stebbingi, Patience (A.), Journ. Linn. Soc., Zool., vol. xxx., p. 42, pl. vii., figs. 1-7.
- 1908. *Trichoniscus Stebbingi*, Bagnall (R. S.), Ann. Soc. Royale Zoologique et Malacologique de Belgique, xliii., pp. 127–129.

A single specimen in an orchid house belonging to Mr. Cookson at Wylam, and also a few examples in hothouses at Alnwick and Newcastle-upon-Tyne (Bagnall). N.D.

Trichoniscus intermedius n. sp. (provisional), Bagnall.

"Two examples taken amongst herbage on Butcher Hill Farm, near Matfen, in September, 1906, but unfortunately so mutilated about the abdomen as to defy description. The locality is seven or more miles over a hilly road from the nearest station, and I have not been able to search for further examples. The telson is identical with that of *pusillus*, to which species it bears the strongest resemblance; but the

antennæ are like those of vividus, Koch; the flagellum 5 7 jointed, and the peduncle very smooth, without the spines which characterize the peduncle of pusillus.' (Bagnall). N.

TRICHONISCUS ROSEUS (Koch).

Four specimens of the white variety under a stone in the grounds of the Hancock Museum at Newcastle: and richly coloured examples with *Cylisticus*, *T. pygmæus*, etc., at Alnwick: also rarely in a garden at Winlaton and in the winter gardens, Sunderland (Bagnall).

N.D.

TRICHONISCOIDES ALBIDUS (Budde Lund).

1885. Trichoniscus albidus, Budde Lund, Crust. Isopoda terrestria, p. 248.

The *Trichoniscoides albidus* G. O. Sars would seem to be a different species from that of Budde Lund.

Carley Hill Quarry near Sunderland, 1904 (G. S. B.). Two examples in a garden at Winlaton. A few examples with *Trichoniscus roscus* and *T. fygmæus* at Alnwick, which were of a beautiful and pronounced yellowish-pink colour when alive (Bagnall).

HAPLOPHTHALMUS MENGII (Zaddach).

1898. Haplophthalmus Mengii, Sars (G. O.). Crust. Norway, vol. ii., Isopoda, p. 167, pl. lxxiv., fig. 1.

1906. Haplophthalmus Mengii, Webb and Sillem, The British Woodlice, p. 26, pl. vii.

This is Haplophthalmus elegans of Schöbl.

Fulwell Quarry, near Sunderland (G. S. B.) Under stones in garden and field at the Groves, Winlaton, with T. promous. In gardens and cool greenhouse Leazes Park, Newcastle, and under stone in grounds of the Hancock Museum. On one occasion in the open country (Bagnall). N.D.

HAPLOPHTHALMUS DANICUS, Budde Lund.

1898. Haplophthalmus danicus, Sars (G. O.), Crust. Norway, vol. ii., Isopoda, p. 165, pl. lxxiv., fig. 2.

1906, Haplophthalmus danicus, Webb and Sillem, The British Woodlice, p. 27, pl. viii.

Humbleton Hill, near Sunderland (G. S. B.). A mature male and young under a piece of wood in a garden at Wylamon-Tyne, and in numbers Leazes Park, Newcastle, where they occurred in the gardens as well as in the cooler houses (Bagnall).

N.D.

FAM. 3.—ONISCIDÆ

ONISCUS ASELLUS Linné.

Everywhere.

N.D.

PHILOSCIA MUSCORUM (Scopoli).

Sedgefield (A. M. N.); Humbleton Hill, Cleadon, and Carley Hill Quarry near Sunderland, Stocksfield, and Ratcheugh Crag (G. S. B.). Mr. Bagnall has taken it in a great many localities in our two northern counties. He writes to us "Generally common under stones in hedgerows, and amongst dry grass, vegetable matter, etc. A very dark and almost unicolorous form is found under stones in gardens; a totally yellow variety in damp moss of waterfalls (Gibside, Durham, and Saltburn, Yorkshire). A number sent to me from the south of England are of a beautiful pink colour, exhibiting no trace of brown. All our Northumberland and Durham specimens are much darker than the southern examples, with the exception of the yellow variety; and none of them exhibit the slightest trace of pink or red in their coloration." N.D.

PHILOSCIA PATIENCEI Bagnall.

1908. *Philoscia Patiencei*, Bagnall (R. S.), Ann. and Mag. Nat. Hist., ser. 8, vol. i., pp. 428–451, pl. xviii.

After describing this small species of *Philoscia*, which was discovered in large numbers in a hothouse at Kew, Mr. Bagnall writes, "On examining the species something in its general facies appealed to me as being familiar, and I remembered a few examples of a puzzling form which I had found with *Trichoniscus pygmæus*, Sars, in a garden at Winlaton, Co. Durham. This form was entered in my diary for October, 1906, and February, 1907, as "*Trichoniscus dilaticornis*, sp. nov.?" but, as the specimens were undoubtedly immature,

I put them away, and they thus escaped my memory. I was very interested therefore to find upon re-examination that the species was apparently conspecific with the one just described, or, at least, very closely allied to it."

When alive *P. Patiencei* bears a very strong superficial resemblance to the ubiquitous *Trichoniscus pusillus*, both in its general appearance and movements.

N.D.

PLATYARTHRUS HOFFMANSEGGII Brandt.

1898. Platyarthrus Hoffmanseggi, Sars (G. O.), Crust. Norway, vol. ii., Isopoda, p. 175, pl. lxxvi., fig. 2.

1906. *Platyarthrus Heffmanseggii*, Webb and Sillem, The British Woodlice, p. 30, pl. xii.

Carley Hill Quarry, near Sunderland (G. S. B.). Two examples with *Myrmica rubra* at Chopwell, and several with the same ant at Greatham, near Hartlepool (Bagnall). D.

PORCELLIO SCABER Latreille.

Very common, "Including varieties marmorata and marginata of Brandt and Ratzeburg, the latter variety very rare. Also a large form, bright red in colour, which might be called var. rufa, a single specimen Winlaton, and three examples sent to me by Mr. Donisthorpe, taken in the nest of the red ant Formica sanguinea. A small variety is found in colonies in the busiest parts of the nests of the wood ant Fermica rufa at Corbridge-on-Tyne; it is much smaller than the type, the dorsal surface not so scabrous, cephalic lobe less pointed, and distal joint of the flagellum longer in relation to basal joint; but as the sexual characters, etc., on dissection, entirely agree with P. scaber, it would be better to regard it as a form of that species, most likely produced after several generations of life with the ants; it might bear the distinguishing name var. Darwiniana. On two occasions I have found colonies almost identical with the last living under stones in rock-pools of salt water and entirely submerged; and when disturbed they merely ran along the bed of the pool to seek shelter under another submerged stone or piece of weed" (Bagnall). N.D.

PORCELLIO PICTUS Brandt and Ratzeburg.

1898. Porcellio pictus, Sars (G. O.), Crust. Norway, vol. ii., Isopoda, p. 177, pl. lxxviii., fig. 1.

1906. Porcellio pictus, Webb and Sillem, The British Woodlice, p. 33, pl. xiv.

A few in the Hancock Museum grounds, Newcastle. Several examples in garden and cellars, and a small colony under a stone in quarry at Winlaton. Common under stones near inn at Egglestone-in-Teesdale, also under bark of logs laid for firewood; and at Corbridge (Bagnall). N.D.

PORCELLIO DILATATUS Brandt.

Several taken in rubbish heap behind Hancock Museum, Newcastle; a few in orchid houses at Wylam; common at Alnwick; swarming in cold greenhouses at Winlaton, and also in propagating houses Ravensworth, and in Leazes Park, Newcastle-on-Tyne (Bagnall).

PORCELLIO RATHKEI Brandt.

1853. Porcellio trivittatus, Lereboullet, Mem. Crust. Fam. Cloportides (Mem. Soc. Nat. Hist. Strasbourg), p. 54, pl. i., figs. 13, 14, pl. iii., figs. 66–70.

1898. Porcellio Rathkei, Sars (G. O.), Crust. Norway, vol. ii., Isopoda, p. 180, pl. lxxix., fig. 1.

1906. Porcellio Rathkei, Webb and Sillem, The British Woodlice, p. 34, pl. xvi.

Near Winlaton Mill, Stocksfield, and Humbledon Hill near Sunderland (G. S. B.). A single example under stones in meadow at Lockhaugh near Rowlands Gill (Bagnall). N.D. PORCELLIO LÆVIS Latreille.

One adult and three young under stone on rubbish heap behind the Hancock Museum, Newcastle-upon-Tyne (Bagnall).

METOPONORTHUS PRUINOSUS (Brandt).

1868. *Porcellio pruinosus*, Bate and Westwood, vol. ii., p. 487.

1898. Metoponorthus pruinosus, Sars (G. O.), Crust. Norway, vol. ii., Isopoda, p. 184, pl. lxxx., fig. 2.

1906. Metoponorthus pruinosus, Webb and Sillem, The British Woodlice, p. 37, pl. xix.

Garden, Burnmoor Rectory, co. Durham (A. M. N.). In numbers swarming with *P. scaber* in heap of garden rubbish, Hancock Museum grounds, Newcastle. Alnwick, common. One specimen in a quarry near the village of Winlaton, where also it occurred in a cellar, and swarming in old greenhouses with *Porcellio dilatatus*; Axwell Park, near Blaydon; a colony under large stone near the salt-works at Greatham (Bagnall).

N.D.

Cylisticus convexus (De Geer).

- 1868. Porcellio armadilloides, Bate and Westwood, vol. ii., p. 485.
- 1898. Cylisticus convexus, Sars (G. O.), Crust. Norway, vol. ii., Isopoda, p. 186, pl. lxxxi.
- 1906. Cylisticus convexus, Webb and Sillem, The British Woodlice, p. 39, pl. xxi.

Several specimens at Alnwick in fernery, and a solitary example crawling on the footpath at Monkseaton near Whitley Bay, Northumberland. A single example in a manure heap, Axwell Park, November, 1908 (Bagnall).

FAM. 4.—ARMADILLIDIIDÆ

Armadillidium vulgare (Latreille).

Widely distributed, but not nearly so common as it is in the south of England.

N.D.

ARMADILLIDIUM PULCHELLUM Brandt.

- 1892. Armadillidium pulchellum, Dollfus (A.), Tableaux synoptiques de la Faune Française. Le genre Armadillidium. Feuille des Jeunes Naturalistes, p. 14 (separate copy).
- 1898. Armadillidium pulchellum, Sars (G. O.), Crust. Norway, vol. ii., Isopoda, p. 191, pl. lxxxiii., fig. 4.
- 1906. Armadillidium pulchellum, Webb and Sillem, The British Woodlice, p. 42, pl. xxiv.

49 .

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

This species is apparently fond of dry situations. Near Stocksfield, Devil's Water (G. S. B.). Two adult and many young under a stone at Winlaton. Found in colonies of the black ant (*Formica fusca*) at Hedley, near Stocksfield, and near Ebchester in the Derwent Valley (Bagnall). N.D.

ARMADILLIDIUM NASATUM Budde Lund.

- 1892. Armadillidium nasatum, Dollfus (A.), Tableaux synoptiques de la Faune Française. Le genre Armadillidium. Feuille des Jeunes Naturalistes, p. 10 (separate copy).
- 1899. Armadillidium nasatum, Norman (A. M.), British Land Isopoda. Ann. and Mag. Nat. Hist.. ser. 7, vol. iii., p. 75, pl. vi., figs. 5–8,
- 1906. Armadillidium nasatum, Webb and Sillem, The British Woodlice, p. 40, pl. xxii.

Common in Mr. Cookson's orchid house at Wylam-on-Tyne; garden and cool greenhouse in Leazes Park, Newcastle-upon-Tyne; and a few taken at Alnwick (Bagnall).

SECTION VII.—EPICARIDA

FAM. I.—PHRYXIDÆ

PHRYXUS ABDOMINALIS Kröyer.

Bate and Westwood write, "Mr. Alder has obligingly forwarded to us a specimen of the male on *Hippolyte Barleci* taken at Cullercoats on the Northumberland coast." N.

FAM. 2.—BOPYRIDÆ

PLEUROCRYPTA LONGIBRANCHIATA (Bate and Westwood).

This is *Phrywus longibranchiatus* B. and W. (vol. ii., p. 246). They write "The Rev. A. M. Norman announces it from a specimen of *Pagurus Thompsoni* dredged off Tynemouth, August, 1863." The specimen thus recorded had been examined and named by Mr. Bate, the name at that time being a MS. one. It and specimens recorded by Bate as taken on *Galathea squamifera* belonged probably to different

species. The specimen from the Northumberland coast remained in Mr. Bate's possession, so that it must be doubtful what it really was. Sars suggests, and perhaps rightly, that it was *Pseudione Hyndmanni* (Bate) (G. O. Sars, Crust. Nor., Isop., p. 207, cf. p. 203).

[It may be here mentioned that while the work of Bate and Westwood was in course of publication, species of Amphipoda and Isopoda, which could not be identified, were sent to Mr. Bate for use in his work. Manuscript names of some of these, including that of the foregoing parasitic Isopod, as well as Heiscladus longicaudatus and Nania caudadentata were sent by Mr. Bate, and entered in the lists (Nat. Hist. Trans. North. and Dur., vol. i., 1865, p. 25), but the descriptions were never published, nor were the specimens returned. They were presumably lost, as Mr. Bate was usually very exact in the return of specimens.]

ORDER VI.-AMPHIPODA

Prof. A. Meek has during the last few years been doing excellent work on the Amphipoda, and the following list will show how much it owes to his researches (see Report on Scientific Investigations of Northumberland Sea Fisheries Committee, 1801, and Nat. Hist. Trans. Northumberland, Durham, and Newcastle-upon-Tyne, vol. xiv., pt. 1, p. 57); but many of his records are now first given here. At p. 256 the number of Amphipods from the two counties is given as 130, but it will be found that in the following notes more than that number are recorded; additional species having been discovered by Professor Meek.

SECTION I.—HYPERIIDEA FAM. 1.—HYPERIIDÆ

Hyperia Galba (Montagu)=Lestrigonus exulans and Kinahani B. & W. &

Occasionally taken off the coasts of Northumberland and Durham.

N.D.

Hyperoche tauriformis (Bate and Westwood)=H. Kröyeri
Boyallius and G. O. Sars.

Young and adult specimens have been obtained nearly every year in the surface nets at the trawling excursions; and washed up in abundance in Cullercoats Harbour, March, 1903 (A. Mk.)

EUTHEMISTO COMPRESSA (Goës).

1878. Lestrigonus spinidorsalis, Bate, Ann. and Mag. Nat. Hist., ser. 5, vol. i., p. 411, fig. 2.

Professor Meek tells us that he has taken typical specimens of this species off Northumberland.

N.

EUTHEMISTO GRACILIPES (Norman).

- 1863. Hyperia oblivia, Bate and Westwood, vol. ii., p. 16 (but not of Kröyer).
- 1869. Hyperia gracilipes, Norman, "Last Report Dredging Shetland." Brit. Assoc. Rep. for 1868, p. 287.
- 1887. Parathemisto longipes, Bovallius, "Syst. List of Amphip., Hyperiidea." Bihang t. K. Sv. Vet.-Akad. Hand., vol. xi., no. 16, p. 21.
- 1889. Parathemisto gracilipes, Bovallius, "Contrib. to Monog. of Amphip., Hyperiidea." K. Sv. Vet.-Akad. Hand., vol. xvii., no. 7, p. 368.
- 1906. Euthemisto gracilipes, Norman and Scott, The Crustacea of Devon and Cornwall, p. 54.

There are some Arctic Amphipods which reach the British Isles, but which are there of very much smaller size and less pronounced characters; by some naturalists these are regarded as distinct species, by others as varieties. Euthemisto gracilipes is such a form. It differs from E. compressa in its very small size, and the absence of dorsal spinose keels. Although we have given it as a species, we really regard it as a depauperized form of E. compressa. British writers, following the mistake of Bate and Westwood, have frequently recorded it as Parathemisto oblivia. From that species it may at once be distinguished by the carpus of the first two pairs of peræopods, which are ovately formed, and wider than the preceding joint.

Druridge Bay, 1896, Cambois Bay, 1898, and subsequently at other places on the Northumberland coast (A. Mk.). Mr. Thomas H. Nelson, the ornithologist, has observed this *Euthemisto* cast up at Redcar, Yorkshire, in the most extraordinary quantity on several occasions in the early part of the year, the first time being April 4, 1892.* These shoals must have come from the north past Northumberland and Durham.

N.D.

FAM. 2.—ORCHESTIIDÆ

TALITRUS LOCUSTA (Pallas).

High-water mark among decaying weeds, sandy shores, common.

N.D.

Hyale Lubbockiana (Bate)=Allorchestes imbricatus.

"Coast of Northumberland by Mr. Joshua Alder" (Bate and Westwood).

N.

HYALE NILSSONI (Rathke).

Common amongst the rocks, especially under the little masses of mussels at Cullercoats and Whitley near highwater mark (A. Mk.)

N.D.

ORCHESTIA LITTOREA (Montagu).

Common high-water mark among pebbles mixed with sand. Orchestia brevidigitata B. and W., vol. ii., p. 277, is the young of this species.

N.D.

ORCHESTOIDEA DESHAYESH (Audouin).

Abundant among pebbles high-water mark at Ryhope (A. M. N.)

FAM. 3.—LYSIANASSIDÆ

Lysianassa plumosa Boeck.

1861. Lysianassa Costa, Bate and Westwood vol. i., p. 74 Ω.
1861. Lysianassa longicornis, Bate and Westwood (partim), vol. i., p. 85 β.

^{*}See Norman, The Naturalist, 1892, p. 175, and refer to what has been written under Thysanocssa longicaudata, p. 271.

1870. Lysianassa plumosa, Boeck, Crust. Amphip. Bor. et Arct., p. 14 3.

1893. Lysianassa septentrionalis, Della Valle, Fauna und Flora des Golfes von Neapel, p. 775.

This does not seem to be the *Lysianassa Costæ* of Milne-Edwards, and Della Valle re-named it; but Boeck's name must take precedence.

A single specimen from coast of Northumberland sent by Mr. Alder (Bate and Westwood).

Lysianassa ceratina (Walker).

1889. Lysianax ceratinus, Walker, "Third Report on Higher Crustacea." Fauna of Liverpool Bay, vol. iii., p. 200, pl. x., figs. 1–8.

The Lysianassa Costae and L. longicornis & of Dredging Report of 1863 and 1864 are referable to this more recently described form, which is distinguished from L. plumosa in wanting the upturned process of the lower hind margin of the third segment of the metasome. L. ceratina was taken off Holy Island, Northumberland (A. M. N.)

ACIDOSTOMA OBESUM (Bate)=Anonyx obesus Bate.

A number of specimens dredged in 39-59 fathoms off Durham and Northumberland coasts (A. M. N.) N.D.

Scopelocheirus Hopei (A. Costa) = Callisoma crenata B. & W.

Seven miles E. by S. from Tynemouth, 25 fathoms; near Holy Island and off other parts of Northumberland coasts (A. M. N.); off Seaham Harbour, 30-40 fathoms, abundant (G. H. and A. M. N.); off Berwick, 25 fathoms (A. Mk.) N.D.

HIPPOMEDON DENTICULATUS (Bate).

Seven miles E. by S. from Tynemouth, 25 fathoms; near Holy Island and several other places in deep water off Northumberland coast (A. M. N.); twelve fathoms off Newbiggin (G. S. B.); off Seaham Harbour (G. H.)

N.D.

HIPPOMEDON PROPINQUUS G. O. Sars.

Mr. Meek has taken a few specimens in 39 fathoms off Northumberland and Durham. N.D. ORCHOMENE HUMILIS (A. Costa)

This is Anonyx Edwardsii Bate and Westwood (not Kröyer), Anonyx melanephthalmus Norman, Anonyx serratus Stebbing (not Boeck), and Orchemene Batei G. O. Sars, whose illustrations should be consulted, as those of Bate and Westwood are worthless.

Forty to fifty miles off Tynemouth, 40 fathoms, and 100 miles off in 25-30 fathoms (A. M. N.)

ORCHOMENILLA NANA (Kröyer) = Tryphesa ciliata G. O. Sars.

Five to six miles off Souter Point in 39 fathoms (A. Mk.);

off the Durham coast (A. M. N.)

D.

TRYPHOSA NANOIDES (Lilljeborg).

Thirty-four miles east of Almmouth in 39 fathoms (A. Mk.)

Tryphosa Sarsi (Bonnier) = Tryphosa nana G. O. Sars (not Kröyer).

Cullercoats and Beadnell in 1900 (A. Mk.) N.

TRYPHOSA HERINGII (Boeck).

Cullercoats (A. Mk.)

N.

Tryphosites Longipes (Bate)=Anonyx longipes B. & W. \(\square\)= Anonyx ampulla B. & W. (not Kröyer) \(\partial \).

One hundred miles off Tynemouth, 25-30 fathoms, 1862; and off Berwick, 1864 (A. M. N.); trawlers, Sunderland (G. S. B.); off Souter Point in 39 fathoms, and off Tyne in 25 fathoms (A. Mk.)

N.D.

TMETONYX CICADA (Fabricius)=Anonyx Hælbolli B. & W. (not Kröyer).

Off Holy Island, 35–50 fathoms, 1864, and off Seaham Harbour (A. M. N.)

LEPIDEPECREUM CARINATUM Bate & Westwood.

1861. Anenyx lengicernis, Bate and Westwood, Brit. Sessileeyed Crust., vol. i., p. 91 &; and Bate, Cat. Amphip. Brit. Mus., 1862, p. 72, pl. xi., fig. 4.

1869. Lepidepecreum carinatum, Bate and Westwood, Brit. Sessile-eyed Crust., vol. ii., p. 509 Q.

- 1890. Lepidepecerum mirabile, Meinert, Videnskab. Udbytte Kanonbaden "Hauchs" Togter, Crust. Malacos., p. 153, pl. i., figs. 7–12.
- 1891. Lepidepecreum carinatum, G. O. Sars, Crust. Norway, Amphip., p. 113, pl. xxxviii., fig. 2, pl. xxxix., fig. 1.
- 1893. Anonyx longicornis, Della Valle, Fauna und Flora des Golfes von Neapel, Gammarini, p. 814, pl. lx., figs. 47-49.

Della Valle erroneously synonymizes the *Lepidepecreum* clypeatum of Chevreux and *L. foraminiferum* of Stebbing with the present species.

Although the specific name *longicornis* is the earlier one, it is altogether misleading, as it applies only to the male; and no injury is done to the describers in using their later name *carinatum*.

L. carinatum has a known distribution from South Norway and Shetland to the Mediterranean, but it would seem to be always scarce when found.

Two specimens have been taken by G. S. B. in 25 fathoms, four miles off Tynemouth; and another by A. Mk. in 25 fathoms off St. Mary's Isle in 1903.

N.

FAM. 4.—PONTOPOREIIDÆ

BATHYPOREIA GUILLIAMSONIA (Bate 1856)=B. pilosa B. & W. (not Lindström)=B. norvegica G. O. Sars.

Whitburn (G. S. B.)

D.

BATHYPOREIA PELAGICA (Bate).

East of Souter Point, 39 fathoms; and very common in sand from 6 down to 40 fathoms (A. Mk.); Seaton Carew, 4 fathoms (G. S. B.)

N.D.

HAUSTORIUS ARENARIUS (Slabber) = Sulcator arenarius B. & W. Sands between Whitburn and Sunderland (A. M. N.); coast of Northumberland (Albany Hancock fide Bate); Bamburgh and Whitburn (G. S. B) N.D.

UROTHOE MARINA (Bate).

Near Holy Island, Northumberland, 35-50 fathoms (A. M. N.); off Seaham, 22 fathoms (G. S. B.) N.D. UROTHOE ELEGANS Bate.

Towing net off the Tees, 1866 (G. S. B.)

D.

FAM. 5.—PHOXOCEPHALIDÆ

METAPHOXUS FULTONI (Th. Scott).

Off the Tyne, 25 fathoms, 1904 (A. Mk.)

Harpinia neglecta G. O. Sars=*Phoxus plumosus* B. & W. (not of Kröyer).

In many dredgings off Northumberland and Durham in 39-59 fathoms (A. Mk.); seven miles off Tynemouth, 25 fathoms. frequent, and 100 miles off in 40-50 fathoms (A. M. N.)

HARPINIA SERRATA G. O. Sars.

Off Blyth in 22 fathoms (A. Mk.)

FAM. 6.—AMPELISCIDÆ

Ampelisca Typica (Bate)=Ampelisca Gaimardi B. & W. (not Kröyer).

Off Holy Island and off Seaham, 25 fathoms (A. M. N.); off Ryhope, 10–12 fathoms (G. H.)

Ampelisca tenuicornis Lilljeborg=A. lævigata B. & W. (not Lilljeborg).

Off Seaham (A. M. N.); in many dredgings off Northumberland and Durham (A. Mk.)

N.D.

AMPELISCA ASSIMILIS (Boeck).

Off Marsden, 10 fathoms (A. M. N.); 25 miles E. of Alnmouth, 50 fathoms (A. Mk.); off Souter Point, 1904 (G. S. B.)

Ampelisca Brevicornis (A. Costa)=A. Belliana B. & W.=
A. lævigata (Lilljeborg) G. O. Sars.

In haddocks' stomachs, Hartlepool, off Seaham, near Holy Island, 40–50 fathoms (A. M. N.); off Whitburn (G. S. B.); not uncommon in moderate depths (A. Mk.)

N.D.

AMPELISCA SPINIPES Boeck.

Northumberland coast, 1864: off Seaham (A. M. N.); off Cullercoats, and down to 50 fathoms 25 miles E. of Alnmouth, also off Blyth in 22 fathoms (A. Mk.)

N.D.

AMPELISCA MACROCEPHALA Lilljeborg.

In 39-50 fathoms off Northumberland (A. Mk.) N.

Byblis Gaimardi (Kröyer).

This is not Ampelisca Gaimardi B. & W., for which see Ampelisca typica.

Off Seaham (A. M. N.); 29 miles E. of Alnmouth in 59 fathoms (A. Mk.)

HAPLOOPS TUBICOLA Lilljeborg.

Off Marsden, 7 miles E. of Tynemonth, 1862, off Berwick, 1863, near Holy Island, 1864 (A. M. N.); 25 miles E. of Alnmouth in 50 fathoms, and off Blyth in 22 fathoms (A. Mk.) N.D.

FAM. 7.—AMPHILOCHIDÆ

Amphilochus Manudens Bate=A. Bocckii Meinert and A concinnus and Callimera acutidigitata Stebbing.

Off Seaham, 25–30 fathoms (G. H.); east of Alnmouth and Souter Point. 39–50 fathoms, 1901, and off Blyth in 22 fathoms, 1904 (A. Mk.)

N.D.

AMPHILOCHOIDES SERRATIPES (Norman).

1869. Prebelium serratifes, Norman, Last Report Dredging Shetland Isles. Brit. Assoc. Report for 1868, p. 273.

1892. Amphilecheides edentenya, G. O. Sars, Crust. Norway, Amphip., p. 221, pl. lxxv., fig. 2 (not A. edentenya Boeck).

1895. Amphilochoides Boeckii, id. ibid., p. 690.

East of Alnmouth and Souter Point, 39-50 fathoms, and also off the Tyne in 22 fathoms (A. Mk.)

N.D.

AMPHILOCHOIDES ODONTONYX (Boeck).

1870. Amphilechus edentenyx, Boeck, Crust. Amphip. Borealia et Arctica, p. 51.

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

1892. Amphilochoides pusillus, G. O. Sars, Crust. Norway, Amphip., p. 222, pl. lxxvi., fig. 1.

1895. Amphilochoides odontonyx, id. ibid, p. 690.

Two and a half miles off Souter Point, Durham, 21 fathoms (A. Mk.)

GITANA SARSII Boeck.

In 21 fathoms off Northumberland (A. Mk.)

N.

N.

GITANOPSIS INERMIS (G. O. Sars).

Off Cullercoats (G. S. B.)

FAM. 8.—STENOTHOIDÆ

STENOTHOE MARINA (Bate).

Cullercoats and off Durham coast (A. M. N.); Cullercoats (J. Alder); Seaham, 25–30 fathoms (G. H.) N.D.

STENOTHOE MONOCULOIDES (Montagu).

Cullercoats (J. Alder); Ryhope (A. M. N.); Sunderland and near mouth of the Coquet (G. S. B.); North Sunderland (A. Mk.)

Метора Alderi (Bate)= Montagua norvegica В. & W. (not Lilljeborg) ♂.

Cullercoats (J. Alder and A. M. N.); 40-50 miles E. by N. from Tynemouth, 40 fathoms (A. M. N.); Almmouth Bay (A. Mk.)

METOPA RUBROVITTATA G., O. Sars.

Several specimens from Cambois Bay, 1901, and 16-17 miles off Souter Bank, 39 fathoms (A. Mk.)

N.D.

METOPA PUSILLA G. O. Sars.

East of the Longstone in 40 fathoms, Sept. 2, 1902 (A. Mk.) N.

METOPA NORVEGICA (Lilljeborg).

1850. Leucothec norvegica, Bidr. till Norra Russlands och Norrige fauna, &c. K. Vet.-Akad. Hand., vol. ii., p. 335, pl. xx., fig. 4.

1855. Montagua pollexiana, Bate, Brit. Assoc. Report, P. 57. 1900. Metopa norvegica, Norman, Ann. and Mag. Nat. Hist., ser. 7, vol. vi., p. 41.

In the paper last referred to reasons are given for adopting Lilljeborg's specific name.

Cullercoats (J. Alder and A. M. N.); near Holy Island, 35–50 fathoms, and 40–50 miles E. by N. from Tynemouth, 40 fathoms (A. M. N.); Seaham (G. H.); Dogger Bank, 1899 (G. S. B.); 25 fathoms off Berwick (A. Mk.)

N.D.

METOPA PROPINQUA G. O. Sars.

Off Blyth in 22 fathoms, 1904 (A. Mk.)

N.

METOPA ABSCISA Norman.

1869. Montagua clypeata, Bate and Westwood, vol. ii., p. 499 (not Leucothoe clypeata, Kröyer).

1900. Metopa abscisa, Norman, Ann. and Mag. Nat. Hist., ser. 7, vol. vi., p. 42, pl. iii., figs. 6-10.

Cullercoats (A. M. N.)

N.

METOPELLA NASUTA (Boeck).

The genus *Mctopella* was suggested by Sars in his work at p. 274.

Twenty-nine miles off Alnmouth in 50 fathoms, and 16 miles off Souter Point, Durham, in 39 fathoms (A. Mk.) N.D. STHENOMETOPA PALMATA (G. O. Sars).

A genus *Metopina* was established by A. M. N. with this species as the type (Ann. and Mag. Nat. Hist., ser. 7, vol. vi., 1900, p. 45), but that name being already preoccupied, *Sthenometofa* was substituted (Notes on the Natural History of East Finmark, Ann. and Mag. Nat. Hist., ser. 7, vol. x., 1902, p. 481).

About five miles off Souter Point, Durham, 30 fathoms (A. Mk.) D.

STHENOMETOPA ROBUSTA (G. O. Sars).

1892. Metopa robusta, G. O. Sars, Crust. Norway, Amphip., p. 270, pl. xcvi., fig. 1.

1900. Metopina robusta, Norman, Ann. and Mag. Nat. . Hist., ser. 7, vol. vi., p. 45. 1902. Sthenometopa robusta, Norman, Ann. and Mag. Nat. Hist., ser. 7, vol. x., p. 480.

Off Cullercoats, August 30, 1906 (A. Mk.)

Cressa dubia (Bate)=Danaia dubia B. & W.

Off Alnmouth, 39–50 fathoms, off Cullercoats, and off Blyth in 22 fathoms (A. Mk.)

FAM. 9.—ŒDICERID.E

Monoculodes carinatus (Bate).

Monoculodes Stimpsoni B. & W. would seem to be the same species (see A. M. N.'s notes Ann. and Mag. Nat. Hist., ser. 6, vol. iii., 1889, p. 447, pl. xix., figs. 1-5).

Off Berwick, 1864 (A. M. N.); one young specimen from the Inner Farne Islands, 1898 (A. Mk.)

N.

Perioculodes Longimanus (Bate & Westwood) = Momentales Grubei Boeck=Monoculodes æquimanus Norman, MS., D. Robertson.

Off Marsden, 10 fathoms (A. M. N.); Druridge Bay and 5-6 miles off Souter Point, 30-50 fathoms (A. Mk.)

N.D. Pontocrates Arenarius (Bate).

1889. *Pontocrates arenarius*, Hoek, Crustacea Neerlandica ii., p. 28, pl. ix., fig. 7.

1906. *Pontocrates arenarius*, Norman and Scott, Crustacea of Devon and Cornwall, p. 68, pl. vi., figs. 1-4.

Pontocrates arenarius has not as yet been found in Norway. The species which Sars igures under that name (Supplement, pl. vi., fig. 2, pl. vii., fig. 1) must bear the name Pontocrates norvegicus Boeck. As far as our observations go the latter species is more generally met with on our coasts than P. arenarius. Hoek, on the plate referred to, has given an excellent figure of the second gnathopod of P. arenarius, the carpus of which is rounded at its extended point, whereas in P. norvegicus it is hollowed like a little spoon (Sars, Supp., pl. vi., fig. 2); there is still greater difference in the first gnathopod, which in arenarius has a very oblique palm (as in P. altamarinus, see Sars, Supp., pl. vii., fig. 2), whereas

in *P. norvegicus* it is scarcely at all oblique (Sars, Supp., pl. vi., fig. 2). Figures of this and allied forms are given in the "Crustacea of Devon and Cornwall."

Whitburn in sand between tidemarks (John Hancock and G. S. B.); Howden (G. H. and A. M. N.)

N.D.

PONTOCRATES ALTAMARINUS (Bate).

1906. *Pontocrates altamarinus*, Norman and Scott, Crust. Devon and Cornwall, p. 69, p. vii., figs. 1-4.

One hundred miles off Tynemouth in 25-30 fathoms (A. M. N.)

Synchelidium haplocheles (Grube).

1906. Synchelidium haplocheles, Norman and Scott, Crust. Devon and Cornwall, p. 67, pl. vi., figs. 7-9.

A. M. N. in his paper "A Month on the Trondhjem Fiord" (Ann. and Mag. Nat. Hist., ser. 6, vol. xv., 1895, p. 486) gave reasons for regarding Kröyera brevicarpa B. & W. and Synchelidium brevicarpum Sars as synonyms of this species, and substituted the name P. tenuimanum Norman for the Synchelidium haplocheles of Sars.

Inner Farne Islands, Alnmouth, Druridge Bay, Blyth Bay, and Cullercoats (A. Mk.)

HALIMEDON PARVIMANUS (Bate and Westwood).

This is Westwoodia cocula and W. hyalina Bate, Œdiceros parvimanus B. & W., and Halimedon Muelleri Boeck (see Norman, Notes on British Amphipods, Ann. and Mag. Nat. Hist., ser. 6, vol. iii., p. 455, pl. xx., figs. 10–14).

Near Holy Island, 40-100 miles E. of Tynemouth in several dredgings, 7 miles off Seaham, 25 fathoms (A. M. N.); in dredgings in 21-39 fathoms off Souter Point (A. Mk.)

N.D.

FAM. 10.—PLEUSTIDÆ

NEOPLEUSTES BICUSPIS (Kröyer).

This is not *Pherusa bicuspis* B. & W., but the species which was recorded in 1865 (Nat. Hist. Trans. Northumberland, Durham, and Newcastle, vol. i., p. 24) under the MS. name which Spence Bate had given to the specimens sent to him

"Calliefe bidentata." It seems to be a common form along the east coast of Great Britain.

Forty to a hundred miles E. of Tynemouth, 25-40 fathoms, 1862 (A. M. N.), fishing boats, Cullercoats (J. Wright); trawlers, Sunderland (G. S. B.); off Scaham, 25-30 fathoms (G. H.); 45 fathoms 52 miles E.N.E. off Tyne, off Souter Point, and off Blyth, 22 fathoms (A. Mk.)

Sympleustes Latipes (M. Sars) = Calliope Ossiani and Fingalli Bate.

Cullercoats (J. Alder and A. M. N.); trawlers, Sunderland (G. S. B.); 40 fathoms off Seaham (G. H.); 16–17 miles off Souter Point, 30 fathoms (A. Mk.)

N.D.

FAM. 11.—EPIMERHDÆ

EPIMERIA CORNIGERA (Fabricius) = Acanthonotus Owenii

B. & W.

Near Holy Island 35-50 fathoms, 3-50 miles off Tynemouth, and off Durham coast (A. M. N.); 25 miles off Almouth 50 fathoms and Berwick Bank 27 fathoms (A. Mk.)

FAM. 12.—IPHIMEDHDÆ

N.D.

IPHIMEDIA OBESA H. Rathke.

Cullercoats, fishing boats (J. Alder and A. M. N.); off Northumberland and Dogger Bank, and off Durham coast, 1862 (A. M. N.); Sunderland, trawlers (G. S. B.); off Alnmouth and off Souter Point (A. Mk.)

Odius carinatus (Bate) = Otus carinatus Bate.

A specimen taken on gravelly ground in 46 fathoms 10 miles off Berwick Bay, 1863 (A. M. N.)

FAM. 13.—TIRONIDÆ

TIRON ACANTHURUS Lilljeborg.

This is Syrrhee hicuspis Goes and Tessarops hastata Norman (Crustacea Amphipoda New to Science or to Britain, Ann. and Mag. Nat. Hist., ser. 4, vol. ii., 1868, p. 412, pl. xxii., figs. 4-7).

Off Durham coast, 1862 (A. M. N.); about five miles off Souter Point, 30 fathoms (A. Mk.)

D.

Argissa hamatipes (Norman).

- 1869. Syrrhoe hamatipes, Norman, Last Report Dredging among the Shetland Isles. Brit. Assoc. Rep. for 1868, p. 279.
- 1870. Argissa typica, Boeck, Crust. Amphip. Borealia et Arctica, p. 45.
- 1890. Chimæropsis danica, Meinert, Videnskab. Udbytte Kanonbaden "Hauchs" Togter, Crust. Malacos., p. 167, pl. ii., figs. 42-47 &.
- 1891. Argissa typica, G. O. Sars, Crust. Norway, Amphip., p. 141, pl. xlviii.

In several dredgings off Northumberland and Durham in 39–59 fathoms (A. Mk.)

N.D.

FAM. 14.—EUSIRIDÆ

Eusirus longipes Boeck=E. helvetiæ Bate.

Deep water E. of Tynemouth, 1862, off Berwick, 1868, near Holy Island, 35–50 fathoms, 1864 (A. M. N.)

FAM. 15.—CALLIOPHDÆ

APHERUSA BISPINOSA (Bate).

Cullercoats (J. Alder and A. M. N.); seven miles E. by S. from Tynemouth, 25 fathoms (A. M. N.); off Seaham, 25–40 fathoms (G. H.); low water, Sunderland, and 25 miles off Tynemouth (G. S. B.); off Blyth, 22 fathoms (A. Mk.) N.D. APHERUSA BOREALIS (Boeck).

Tidemarks, Boulmer, and Cullercoats, Northumberland (G. S. B.)

Apherusa Clevei G. O. Sars.

1904. Apherusa Clevei, G. O. Sars, "On a new planktozic species of the genus Apherusa (Conseil permanent international pour l'exploration de la Mer. Publications de circonstance, No. 10)."

In 22 fathoms off Blyth (A. Mk.)

APHERUSA JURINII (H. Milne-Edwards).

This is Amphithoe norvegica Rathke and Pherusa fucicola Bate partly (see Walker, Ann. and Mag. Nat. Hist., May, 1891, p. 418).

Cullercoats (J. Alder); 5-6 miles off Souter Point, 30 fathoms (A. Mk.); four miles off Tynemouth in 27 fathoms (G. S. B.)

CALLIOPIUS RATHKEI (Zaddach).

Common between tidemarks.

N.D.

CALLIOPIUS LÆVIUSCULUS (Kröyer).

Occasionally taken between tidemarks. We cannot regard the last as distinct from the present species (A. M. N.) N.D.

FAM. 16.—ATYLIDÆ

NOTOTROPIS SWAMMERDAMII (H. Milne-Edwards).

Abundant between tidemarks.

N.D.

NOTOTROPIS FALCATUS (Metzger).

Alnmouth, 1899 (G. S. B.); not uncommon on the sand outside of the rocks at Cullercoats and Druridge Bay (A. Mk.)

Mr. Meek makes the following interesting statement, "The modified first pair of perceopoda are used to grasp fragments of shell. Most frequently two pieces of shell are taken and grasped by the modified appendages. The animal has then the appearance of lying in a bivalve shell—the fragments of shell coming pretty close together dorsally. The active movements of the apparent bivalves betray, however, their crustacean occupant to the observer."

Nototropis vedlomensis (Bate).

Near Holy Island, 35-50 fathoms; 40-50 miles E. by N. from Tynemouth, 40 fathoms (A. M. N.). Two miles off Cullercoats (A. Mk.); off Souter Point, 1904 (G. S. B.) N.D.

FAM. 17.—DEXAMINIDÆ

DEXAMINE SPINOSA (Montagu).

This species seems to be rare on the east coast, while it is common on all the other shores of Great Britain.

Cullercoats and Druridge Bay (A. Mk.)

N.

- DEXAMINE THEA Boeck=D. tenuicornis Bate (not Rathke).

 Among weeds at low water, Sunderland (G. S. B.)

 D.
- TRITÆTA GIBBOSA (Bate)=Atylus gibbosus Bate.

 Parasitic in sponges, Cullercoats, Oct. 5, 1864 (A. M. N.)

 N

GUERNEA COALITA (Norman).

- 1868. Helleria coalita, Norman, Crustacea Amphipoda New to Science or to Britain. Ann. and Mag. Nat. Hist., ser. 4, vol. ii., p. 418, pl. xxii., fig. 8, and pl. xxiii., figs. 1-6.
- 1887. Guernea coalita, Chevreux, Crustacés Amphipodes de la côte ouest de Bretagne, p. 15, woodcuts 1, 2 (separate copy).
- 1887. Guernea lævis, Chevreux, ibid, p. 41.
- 1887. Prianassus Nordenskioldii, H. J. Hansen, Oversigt over det vestlige Grönlands Fauna af malakostrake Havskrebsdyr. Vidensk. Middel. fra den Naturh. Foren. i Kjöbenhavn, p. 82, pl. ii., figs. 7–7 e, and pl. iii., figs. 1–1 c.
- 1893. Guernea coalita, Della Valle, Fauna und Flora des Golfes von Neapel, Gammarini, p. 570, pl. xxxi., figs. 20–33. pl. lviii., fig. 80.

Surface nine miles N.E. of the Longstone (A. Mk.); off Souter Point (G. S. B.). This species is now known to have a wide range from West Greenland (H. J. Hansen) and Franz Joseph Land (Stebbing) to Naples (Della Valle). N.D.

FAM. 18.—MELPHIDIPPIDÆ

MELPHIDIPPELLA MACRA (Norman).

- 1869. Atylus macer, Norman, Last Report Dredging Shetland. Brit. Assoc. Rep. for 1868, p. 280.
- 1870. Melphidippa longipes, A. Boeck, Crust. Amphip. Bor. et Arct., p. 139.
- 1876. Melphidippa longipes, Boeck, De Skand. og Arct. Amphip., p. 414. pl. xxiv., fig. 5.

- 1889. Melphidippa macra, Norman, "Notes on British Amphipoda." Ann. and Mag. Nat. Hist., ser. 6, vol. iv., p. 121, pl. x., fig. 14, and pl. xii., figs. 4-7.
- 1894. Melphidippeila macera, G. O. Sars, Crust. Norway, Amphip., p. 488, pl. clxxi.

In several dredgings 2½ to 17 miles off Souter Point, 21-39 fathoms (A. Mk.)

FAM. 19.—GAMMARIDÆ

AMATHILLA HOMARI (Fabricius)=Amathilla Sabini Bate= Graia imbricata Bate (the young).

Very common in rock pools and between tidemarks, as well as in shallow water. We cannot see specific difference between A. angulosa and the young of this species, of which Graia imbricata Bate is a still younger condition.

N.D.

GAMMARUS MARINUS Leach.

Ryhope, tidemarks (A. M. N.); Sunderland (G. S. B.); common on the coast (A. Mk.)

GAMMARUS LOCUSTA (Linné).

Abundant between tidemarks and in lammarian zone.

N.D.

GAMMARUS DUEBENI Lilljeborg.

- 1889. Gammarus locusta var., C. Hoek, Crustacea Neerlandica ii., p. 50, pl. x., fig. 13.
- 1889. Gammarus campylops, Norman, Notes on British Amphipods. Ann. and Mag. Nat. Hist., ser. 6, vol. iv., p. 139, pl. xii., fig. 13.

We follow Sars here in using Lilljeborg's specific name, but we are by no means convinced that the species is not the G. campylops of Leach.

Brackish water, Bamburgh, and Hartlepool Slake (A.M.N.); common in the Coquet about a mile from the mouth of the river; in a drain flowing into the Blyth (A.Mk.)

N.D.

GAMMARUS CAMPYLOPS (Leach) G. O. Sars.

One specimen from the river Blyth (A. Mk.)

N.

GAMMARUS PULEX (De Geer).

In lakes and streams everywhere.

N.D.

NIPHARGUS SUBTERRANEUS (Leach).

1863. Niphargus aquilex, Bate and Westwood, Brit. Amphip., vol. i., p. 315.

1900. Niphargus subterraneus, Chilton, The Subterranean Amphipoda of Great Britain. Jour. Linn. Soc., Zool., vol. xxviii., p. 147, pls. xvi., xvii., fig. 1.

It is also Gammarus puteanus Koch and Niphargus stygius Westwood.

The late Mr. R. Howse gave me a specimen of this species in 1893, which had come from a well in West Hartlepool (A. M. N.)

D.

Melita obtusata (Montagu) = Melita proxima Bate = Megamæra Alderi Bate φ .

Near the Dogger Bank, 1862; fishing boats, Cullercoats, 1864 (A. M. N.); 25 miles off Alnmouth, 59 fathoms, and 30 miles off the Farnes, 42 fathoms (A. Mk.)

N.

Melita dentata (Kröyer).

1889. Metita dentata, Norman, Notes on British Amphipoda. Ann. and Mag. Nat. Hist., ser. 6, vol. iv., p. 135, pl. xii., figs. 8–10.

Three specimens taken from fishing boat at Cullercoats (A. M. N.); 25 miles E. of Alnmouth, 50 fathoms (A. Mk.)

Bate and Westwood write respecting Mera grossimana, "Dr. Johnston records it as not rare in Berwick Bay (Zool. Journ., iii., 180)." That southern species is not at all likely to be found on the north-east coast, and there can be little doubt that in this as in some other cases Melita dentata was mistaken for that species.

N.

MELITA PALMATA (Montagu).

Eighty-two miles E. by N. from Tynemouth in 40-45 fathoms, October, 1901 (A. Mk.); in a small salt-water pond at Amble (G. S. B.). The first locality given is a very unusual one for this species.

N.

MEGALUROPUS AGILIS Norman.

- 1889. Megaluropus agilis, Norman, Notes on British Amphipoda. Ann. and Mag. Nat. Hist., ser. 6, vol. iii. p. 446, pl. xviii., figs. 1–10, and vol. iv., p. 123, pl. x., figs. 15–17.
- 1889. Megaluropus agilis. Hoek, Crustacea Neerlandica ii. Tids. der Nederland. Dierk. Vereeniging 2de Reeks Dei II., p. 28, pl. vii., fig. 7, pl. viii., fig. 3, pl. ix., fig. 3.
- 1890. Cheirocratus Drechselii, Meinert, Vidensk. Udbytte Kanonbaden "Hauchs" Togter, Crustacea Malacostraca, p. 170, pl. ii., figs. 48–52.

A few specimens from Cullercoats, Blyth Bay, and Druridge Bay (A. Mk.)

N.

Mæra othonis (H. Milne-Edwards)=Megamæra ethenis Q and Megamæra longimana & (B. and W.)

Frequent off the coasts.

N.D.

CHEIROCRATUS ASSIMILIS (Lilljeborg).

- 1851. Gammarus assimilis. Lilljeborg, Ofvers. Kong. Vet.-Akad. Förhand., p. 23, and 1854, Kong. Vet.-Akad. Handl., p. 455.
 - 1865. Cheirocratus mantis, Norman, Nat. Hist. Trans, Northumberland and Durham, vol. i., p. 13, pl. vii.. figs. 14, 15, and Bate and Westwood, vol. ii., p. 513.
 - 1889. Cheicocratus assimilis, Norman, Ann. and Mag. Nat. Hist., ser. 6, vol. iv., p. 129, pl. x., fig. 13, pl. xi., fig. 11.

Dredged in 35-50 fathoms off Holy Island in 1864 (A. M. N.)

CHEIROCRATUS SUNDEVALLI (Rathke).

This is Lilljeborgia shetlandica Bate 3, Protomedeia Whitei Bate 2, Lilljeborgia Normani Stebbing, Cheirocratus brevicornis Hoek. For changes in the development with growth of the second gnathopod see Norman, Ann. and Mag. Nat. Hist., ser. 6, vol. iv., p. 130, pl. xi., figs. 9, 10, and pl. xii., figs. 1–3.

Off Holy Island, 1864 (A. M. N.); 2½ miles off Souter Point, 21 fathoms, and Cullercoats (A. Mk.)

N.D.

69 F

FAM. 20.—AORIDÆ

MICRODEUTOPUS ANOMALUS (Rathke).

I have the following notes; seven miles off Tynemouth, 25 fathoms, frequent: off Holy Island, 1864 (A. M. N.); Sunderland, low water (G. S. B.); but the only specimens now in my collection are those from off Holy Island, which prove to be females of *Protomedcia fasciata* (which see). This throws some doubt on the other records. Females of the Aoridæ are often, especially young, difficult to distinguish; but the species last named is not likely to have occurred at low water. Mr. Meek in his list gives "Microdeutopus sp., a female was obtained at Cambois Bay in August, 1901."

AORA TYPICA Kröyer=A. gracilis Bate.

Holy Island Harbour, 1900, and from $2\frac{1}{2}$ miles off Souter Point in 21 fathoms (A. Mk.)

LEMBOS LONGIPES (Lilljeborg).

A few specimens, Cullercoats, 28th August, 1901 (A. Mk.)

LEMBOS WEBSTERI Bate.

1876. Microdeuteropus bidentatus, Stebbing, Ann. and Mag. Nat. Hist., ser. iv., vol. xvii., p. 73, pls. iv. and v., figs. 1, 1a, 1b &.

Twenty-four miles off Alnmouth, 50 fathoms, and 2½ miles off Souter Point in 21 fathoms (A. Mk.)

N.D.

FAM. 21.—PHOTIDÆ

PROTOMEDEIA FASCIATA Kröyer.

Off Alnmouth, 39-50 fathoms, and 16 miles off Souter Point, 39 fathoms (A. Mk.). These specimens found by Mr. Meek were very young; on re-examining three specimens which were recorded in 1865 as "Microdeutopus anomalus" from off Holy Island, 38-50 fathoms, I find them to be full grown females of Protomedeia fasciata. A character which was the first to catch my eye, and is a very distinctive one, was the very slender propodos of the anterior pairs of peræopoda, and the slenderness and great length of the nail, which is quite as

long or longer than the propodos; this last little feature is not noticed or correctly figured by Sars—absolutely correct in minute details as he usually is—who represents the nail too short. I mention this because in a mixed gathering of females of *Microdeutopus*, *Aera*, *Protomodeia*, &c., this propodos and nail, being so easily seen, would enable the specimens of the latter to be at once singled out.

N.D.

Gammaropsis Frythrophthalmus Lilljeborg = Eurystheus tridentatus Bate 3 = Eurystheus bispinimanus Bate 9.

Off Holy Island and other parts of the Northumberland coast; fishing boats, Cullercoats (A. M. N.); Seaham, 25-30 fathoms (G. H.); trawlers, Sunderland (G. S. B.); E. of Alnmouth and off Souter Point (A. Mk.). This is perhaps Gammarus maculatus of Johnston.

N.D.

GAMMAROPSIS PALMATA (Stebbing and Robertson).

1891. Pedoceropsis palmata, Stebbing and Robertson, Four New British Amphipoda. Trans. Zool. Soc., vol. xiii., p. 36, pl. vi. A.

1894. Gammaropsis nana, G. O. Sars, Crustacea Norway, Amphipoda, p. 561, pl. excix., fig. 2.

Thirty-two miles E. of Alnmouth, 39 fathems, and $2\frac{1}{2}$ –39 miles E. of Souter Point, Co. Durham, 21–39 fathoms (A. Mk.)

MEGAMPHOPUS CORNUTUS Norman.

1878. Podoceropsis intermedia, Stebbing, "Two new species of Amphipodous Crustacea." Ann. and Mag. Nat. Hist., ser. 5, vol. ii., p. 367, pl. xv., fig. 3.

Two and a half miles off Souter Point in 21 fathoms (A Mk.); and in the same neighbourhood by G. S. B. D.

PHOTIS LONGICAUDATA (Bate).

Off Blyth in 22 fathoms (A. Mk.)

N.

Photis Reinhardi Kröyer.

Off Alnmouth, Farne Islands, and off Souter Point, Co. Durham, in 21-59 fathoms, and off the Tyne in 22 fathoms

(A. Mk.); off Holy Island, 38-50 fathoms; 7-50 miles off Tynemouth, 25-40 fathoms (A. M. N.); Seaham, 20-30 fathoms (G. H.)

My Northumberland specimens were examined by Mr. Spence Bate and named *Eiscladus longicaudatus*; but on examination I find them to be referable to *Photis Reinhardi*.

Podoceropsis excavata (Bate)=Nienia excavata Bate \$\delta\$, and Nienia rimapalmata Bate \$\mathbb{Q}\$.

It is Xenoclea Batei Boeck and Podoceropsis Batei Meinert.

Northumberland coast (J. Alder); outside Holy Island, 35–50 fathoms; fishing boats, Cullercoats; off Sunderland, 1863 (A. M. N.); Seaham (G. H.); trawlers, Sunderland (G. S. B.); off Berwick in 25 fathoms, and off Blyth in 22 fathoms (A. Mk.)

PODOCEROPSIS SOPHIÆ Boeck.

Both sexes of the last species, and the only specimen known to Bate of *Nænia undata* were sent to him from Northumberland by Mr. Alder. *Nænia undata* is believed to be the female of *Podoceropsis Sophiæ* Boeck (=*Nænia tuberculosa* Bate); and if that species should hereafter be found off the Northumberland coast, which there is little doubt it will be, this suspicion would be confirmed. N.

FAM. 22.—AMPHITHOIDÆ

Amphithoe Rubricata (Montagu)=A. littorina Bate. Very common between tidemarks. N.D.

FAM. 23.—JASSIDÆ

ISCHYROCERUS ANGUIPES Kröyer.

"Two or three females obtained at Cullercoats in August have four spines on the inner ramus of the third uropod, and a dorsal row of three or four spines on the telson, and therefore appear to belong to this species." Also in 42-45 fathoms 82 miles E.N. of the Tyne, and in 42 fathoms off the Farne Islands (A. Mk.)

N.

ISCHYROCERUS MINUTUS Lilljeborg.

1889. Podocerus isopus, Walker, Proc. Biolog. Soc. Liverpool, vol. iii., p. 209, pl. xi., figs. 11-13, and 1890, vol. iv., p. 250, pl. xvi., fig. 7.

"Fairly common in the harbour at Cullercoats and at other places on the coast" (A. Mk.); Sunderland (G. S. B.) We regard this as a small form of the foregoing species. N.D.

BRUZELIELLA FALCATA (Montagu) = Podocerus falcatus B. & W. Off Berwick, 1863; Cullercoats; off Seaham, 25–30 fathoms;

off Sunderland (A. M. N.); Craster and 82 miles E. by N. from the Tyne in 42-45 fathoms (A. Mk.). See Norman and Scott, "Crustacea of Devon and Cornwall," p. 94, for remarks on generic name *Bruzeliella*.

N.D.

Bruzeliella pusilla (G. O. Sars)=Podocerus minutus and pusillus G. O. Sars.

Eighty-two miles E. by N. from Cullercoats, 40-45 fathoms (A. Mk.). Podocerus Herdmani Walker and Podocerus edentonyx of G. O. Sars appear to be founded on a mere varietal or abnormal state of the second gnathopods in which a tubercle is produced in the middle of the inner face of the finger; indeed the typical specimen of Bruzeliella falcata as figured by Montagu has a similar form of the nail. N.

Jassa Pelagica Leach.

This is Jassa capillata Bruzelius, Pedecerus capillatus B. & W., Janassa capillata Sars, and Parajassa pelagica of Stebbing.

Berwick (A. M. N.)

N.

FAM. 24.—COROPHIIDÆ

ERICHTHONIUS HUNTERI (Bate).

Off Durham coast (G. S. B.); off Souter Point, 21 fathoms; off Farnes in 42 fathoms; off Cullercoats in 20-25 fathoms; and 82 miles E. by N. from Tynemouth, 42-45 fathoms (A. Mk.) The females in this genus so closely resemble each other, that it is by no means easy to distinguish them it not found in company with males.

N.D.

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

One or two specimens from off Cullercoats (A. Mk.); off

"Dredged by Mr. Joshua Alder on the Northumberland

Off Cullercoats in 20 fathoms, and S2 miles E.N.E. from

SIPHONGECETES WHITEI (Gosse)=Siphonwcctes Colletti Boeck and S. mucronatus Metzger.

Pretty common on the sand near to the rocks at the south end of Druridge Bay (A. Mk.). Mr. Meek has made some interesting observations on this species (Northumberland Sea Fisheries Commission Report, Scientific Investigations, 1901, p. 59). He has also found it in Skate Roads, North Sunder-

COROPHIUM VOLUTATOR (Pallas)=Cancer grossipes Linné=
Corophium longicorne B. & W.

Common in mud near mouths of rivers and in salt marshes.

coast" (Spence Bate). These were the type specimens.

ERICHTHONIUS DIFFORMIS (H. Milne-Edwards). Cullercoats (J. Alder and H. T. Mennell).

Holy Island (A. M. N.)

CERAPUS CRASSICORNIS Bate.

Control International Distriction
Cullercoats, January 23, 1909 (A. Mk.); Roker (G. S. B.)
COROPHIUM BONELLI H. Milne-Edwards.
One specimen off Cullercoats, 5th August, 1900 (A. Mk.)
Unciola planipes Norman.
1865. Unciola planipes, Norman, Nat. Hist. Trans. North-
umberland and Durham, vol. i., p. 14, pl. vii., figs. 9-13.
1868. Unciela leucopis, Bate and Westwood, vol. ii., p. 518
(not <i>Unciola leucopis</i> , Kröyer).
1870. Glauconome Kroyeri, Boeck, Crustacea Borealia et
Arctica. VidenskSelsk. Forhand., p. 179 8.
1870. Glauconome Steenstrupi, idem. ibidem., p. 150 2.
The type specimen was taken off Holy Island in 35-50
fathoms in July, 1864 (A. M. N.)

74

UNCIOLA CRENATIPALMATA (Bate).

1863. Dryope crenatipalmata, B. & W., vol. i., p. 490 &.

1863. Dryope irrorata, B. & W., vol. i., p. 488 \, 2.

1889. Unciela crenatifalmata, J. Bonnier, Les Amphipodes du Boulonnais. Bull. Soc. Sci. de France et Belgique, p. 229, pls. xii., xiii.

Near the rocks at Cullercoats, August, 1899 (A. Mk.) N.

FAM. 25.—DULICHIIDÆ

Dulichia porrecta Bate.

Twenty-nine miles E. of Alnmouth, 59 fathoms; off Souter Point, 39 fathoms (A. Mk.); off Souter Point (G. S. B.) N.D.

DULICHIA FALCATA Bate.

Fishing boats, Cullercoats (J. Alder).

N.

Dulichia Monacantha Metzger.

One specimen 25 miles off Durham in 45 fathoms, muddy sand (G. S. B., fide A. Mk.)

SECTION III.—CAPRELLIDEA FAM. 1.—CAPRELLIDÆ

Phtisica Marina Slabber=Proto pedata Q=P. Goodseri ξ .

Several specimens from three miles off Cullercoats (A. Mk.). From Hydrozoa, deep water, off Cullercoats, and Durham coast (A. M. N.); trawlers, Sunderland (G. S. B.)

N.D.

PSEUDOPROTELLA PHASMA (Montagu)=Protella phasma Bate.

Three miles E. of Tynemouth and off Seaham (A. M. N.);
Cullercoats from fishing boats (J. Alder); 28 fathoms off
Cullercoats (A. Mk.)
N.D.

CAPRELLA LINEARIS (Linné).

The commonest Caprellidan in the district. Caprella lobata B. & W. is the adult male of this species. Some specimens sent to Mr. Spence Bate from Cullercoats and Seaham were recorded by B. & W., vol. ii., p. 73, as C. equilibra: they

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

however are not that species, but the male of the present one.

N.D.

Periambus typicus (Kröyer)=Caprella typica B. & W.

Off Alnmouth, 39 fathoms, off Cullercoats in 20-25 fathoms, and off Souter Point, Co. Durham, in 21-39 fathoms (A. Mk.); 30 miles off Sunderland, 40 fathoms (G. S. B.)

N.D.

Sub-Class III.—ENTOMOSTRACA ORDER VII.—BRANCHIOPODA Sub-Order I.—PHYLLOCARIDA

FAM. I.—NEBALIIDÆ

NEBALIA BIPES Fabr.

Not common, but occasionally taken off the coast. N.D.

SUB-ORDER II.—CLADOCERA

The works and papers chiefly to be consulted with relation to the Cladocera are:—

- 1. Baird (W.). Natural History of British Entomostraca, 1850.
- 2. Norman (A. M.) and Brady (G. S.). Monograph British Entomostraca of Families Bosminidæ, Macrothricidæ, and Lynceidæ. Nat. Hist. Trans. Northumberland and Durham, vol. i., 1867, pp. 354-408, pls. xviii.-xxiii.
- 3. Brady (G. S.). British species of Entomostraca belonging to Daphnia and other allied genera. Trans. Nat. Hist. Soc. Northumberland and Durham, vol. xiii., 1898, pp. 217-248, pls. vii.-x.
- 4. Lilljeborg (W.). Cladocera Sueciæ (König. Gesellsch. Wissensch., Upsala), 1901.

The last work is indispensable to the student of the Cladocera. All the following species will be found described and amply figured in it. References need not be given in general to Lilljeborg, but they will be given to the best figures of the species in papers by British authors.

DIVISION I.—CALYPTOMERA

SECTION I.—CTENOPODA G. O. Sars

FAM. I.—SIDIDÆ

SIDA CRYSTALLINA (O. F. Müller).

1850. Sida crystallina, Baird, Brit. Entom., p. 107, pl. xii., figs. 3, 4, pl. xiii., fig. 1 a-h.

1901. Sida crystallina, Lilljeborg, l.c., p. 18, pl. i., figs. 1–10, pl. ii., figs. 1–3.

Apparently in all the larger pieces of water; Crag. Broomley, Grindon, Greenley, West Rothley, and South Belsay Lakes, Northumberland; Wynyard, Hardwick, and Sedgefield (A. M. N.); Sweethope (G. S. B.)

Diaphanosoma Brachyurum (Liévin).

- 1848. *Sida brachyura*, Liévin, Branchiopoden der Danziger Gegend, p. 20, pl. iv., figs. 3-9.
- 1850. Diaphanosoma Brandtianum, S. Fischer, Ergänzungen. . . . Umgegend von St. Petersburg vorkom. Crust. Ord. Branchiopoden und Entomostraceen. Mem. des Sav. Etrang., vol. vii., p. 10, pl. iii., figs. 1-5.
- 1865. Daphnella Brandtiana, G. O. Sars, Norges Fersk-vandskrebsdyr; Branchiopoda I. Cladocera Ctenopoda p. 45, pl. ii., figs. 25–33.
- 1901. Diaphanosoma brachyurum, Lilljeborg, l.c., p. 36, pl. iii., figs. 6-13, pl. iv., figs. 1-4.
- 1907. Diaphanosoma brachyura, var. nasuta, Kane (W. F. de V.), The Irish Naturalist, vol. xvi., p. 305, pl. xli.

Other synonyms are Sida brachyura Lilljeborg "De Crustaceis," Daphneda brachyura of P. E. Muller, Hudendorff, and Herrick, Sida Brandtiana Leydig, Daphneda irachyura Hellich, and Diaphanosoma Brandtianun G. O. Sars.

Daphnella Baird, 1850, is preoccupied: Diaphanesoma S. Fischer published later in the same year must therefore be the name of this genus.

The second species of this genus—if the former is worthy of specific rank—is Diaphanosoma Wingii Baird. Of this the following are, according to Lilljeborg, synonyms: Sidaa crystallina S. Fischer, 1851; Diaphanosoma Leuchtenbergianum S. Fischer, 1854; Daphnella brachyura G. O. Sars, 1865, Hellich, Daday, and Stengelin; Daphnella Brandtiana P. E. Müller, Herrick, and Matile; Diaphanosoma brachyurum G. O. Sars, 1890; and Diaphanosoma Leuchtenbergianum Lilljeborg, 1901.

The antennæ when directed backwards do not reach the end of the body in *D. brachyurum*; in *D. Leuchtenbergianum* they attain the length of the body or reach beyond it.

We have taken *Diaphanosoma* in Darden Lakes, Northumberland; and in Wynyard and Hardwick Sedgefield lakes, Co. Durham; but as they were taken some forty years ago we are unable to say positively to which species they belonged; such specimens as have been preserved appear to be referable to *D. brachyurum* (A. M. N.)

SECTION II.—ANOMOPODA FAM. I.—DAPHNIIDÆ

DACTYLURA MAGNA (Strauss).

1898. Dactylura magna, G. S. Brady, l.c., p. 241, pl. x., figs. 1-8, 18.

Pond at Layton Farm, near Sedgefield, Co. Durham (A. M. N.); pond at Elstobb House and at Canal Farm, High Barnes, near Sunderland (G. S. B.); quarry pond between Plessey and Blagdon, Northumberland (G. S. B. and A. M. N.)

DAPHNIA PULEX (De Geer).

Common in ditches and small ponds.

N.D.

DAPHNIA OBTUSA Kurz.

1898. Daphnia obtusa, G. S. Brady, l.c., p. 224, pl. ix., figs. 5-9.

Pond at Bishopton, Co. Durham (A. M. N.)

VAR. PROPINQUA G. O. Sars.

1898. Daphnia obtusa, var. propinqua, G. S. Brady, l.c., p. 225, fig. A, and pl. viii., figs. 21, 22.

Pond at Morton House near Fence Houses (A. M. N.) D.

DAPHNIA HAMATA G. S. Brady.

1898. Daphnia hamata, G. S. Brady, l.c., p. 227, pl. vii., figs. 9-17.

Ponds at Wallington, Northumberland, and near the Bowes House Lodge of Lambton Castle (A. M. N.) N.D.

DAPHNIA LONGISPINA O. F. Müller.

1898. *Daphnia longispina*. G. S. Brady, l.c., p. 228, pl. viii., figs. 11-19.

Crag, Paston, and Sweethope Lakes, Northumberland (G. S. B.); lakes at Wynyard and Hardwick Sedgefield, and moat at Raby Castle. I am not sure if the two badly mounted specimens which I have of the species from Crag Lake may not rather be referable to *D. lacustris* G. O. Sars (A. M. N.)

N.D.

SCAPHOLEBERIS MUCRONATA (O. F. Müller).

In Greenley and Chartners lakes; and in the river Till at Etal, Northumberland; in the lakes at Wynyard and Hardwick Sedgefield (A. M. N.); the Loughs, Knaresdale (G. S. B.)

Simosa vetula (O. F. Müller).

The generic name *Simocophalus* being preoccupied for a genus of snakes, A. M. Norman has substituted for the later *Simocophalus* of Schoedler the name *Simosa* (see Ann. and Mag. Nat. Hist, ser. 7, vol. xi., 1903, p. 367).

This is a common species in lakes, ponds, and streams.

N.D.

CERIODAPHNIA RETICULATA (Jurine).

1901. Ceriodaphnia reticulata, Lilljeborg, l.c., p. 184,: pl. xxvii., figs. 1-10.

Newbiggin, Northumberland; Sedgefield, Co. Durham (A. M. N.) N.D

CERIODAPHNIA MEGALOPS G. O. Sars.

1901. Ceriodaphnia megalops, Lilljeborg, l.c., p. 190, pl. xxvii., figs. 11-15.

Abundant in the river Till at Etal, Northumberland (A. M. N.)

CERIODAPHNIA QUADRANGULA (O. F. Müller).

1901. Ceriodaphnia quadrangula, l.c., p. 193, pl. xxviii., figs. 1-5.

Chartners Lake, Northumberland (A. M. N.) N.

CERIODAPHNIA PULCHELLA G. O. Sars.

1901. Ceriodaphnia pulchella, Lilljeborg, l.c., p. 198, pl. xxviii., figs. 6-18.

Lake at Hardwick Hall, Sedgefield (A. M. N.); Tindale Tarn (G. S. B.)

CERIODAPHNIA LATICAUDATA P. E. Müller.

1901. Ceriodaphnia laticaudata, Lilljeborg, l.c., p. 208, pl. xxix., figs. 8-14.

Lake at Wynyard Park (A. M. N.)

D.

FAM. 2.—BOSMINIDÆ

Bosmina Longirostris (O. F. Müller).

1867. Bosmina longirostris, Brady and Norman, l.c., p. 357, pl. xxii., fig. 4.

1901. Bosmina longirostris, Lilljeborg, l.c., p. 226, pl. xxx., figs. 13-16, pl. xxxi., figs. 1-18, pl. xxxii., figs. 1-3.

Bosminæ have been taken by me in Darden and Sweethope Lakes, Northumberland; also at Wynyard and Hardwick Hall, Sedgefield, and moat at Raby Castle; and I believe all of them to have been this species, but as it is more than forty years ago when they were found, and I merely have records and not specimens, it is possible that those from one or more of the Northumberland localities may belong to the following species (A. M. N.)

N.D.

BOSMINA OBTUSIROSTRIS G. O. Sars.

1867. Bosmina longispina, Brady and Norman, l.c., p. 358, pl. xxii., figs. 1, 2.

1901. Bosmina obtusirostris, Lilljeborg, l.c., p. 237, pl. xxxii., figs. 4–13, pl. xxxiii., figs. 1–12, pl. xxxiv., figs. 1–12, pl. xxxvi., figs. 1–9, pl. xxxvi., figs. 1–12, pl. xxxvii., figs. 1–7.

Tarns on the Humbles, Northumberland (G. S. B.) N.

FAM. 3.—MACROTHRICIDÆ

ILYOCRYPTUS SORDIDUS (Liévin).

1863. Acantheleberis serdida, Norman, Ann. and Mag. Nat. Hist., ser. 3, vol. ii., p. 4 (separate copy), pl. xi., figs. 6-9; and Tyneside Nat. Field Club, vol. vi., p. 55, pl. vi., figs. 6-9.

1867. Ilyocryptus sordidus, Norman and Brady, l.c., p. 368.

Eastern lake at Belsay, and ditch on the south side of the railway between Hexham and Corbridge (G. S. B.); pond of the deserted colliery at Bishop Middleham, and in the Forge Dam at Sedgefield (A. M. N.)

N.D.

MACROTHRIX LATICORNIS (Jurine).

1867. Macrothrix laticornis, Norman and Brady, l.c., p. 360, pl. xxiii., figs. 4, 5.

1901. Macrethrix laticernis, Lilljeborg, l.c., p. 338, pl. liv., figs. 6-13.

East lake at Belsay, Northumberland, at Fardingslake, and in the Glebe Engine Pond, Sunderland (G. S. B.). All these localities are now either built over or otherwise spoiled. N.D.

MACROTHRIX HIRSUTICORNIS Norman and Brady.

1867. Macrothrix hirsuticornis, Norman and Brady, l.c., p. 361, pl. xxiii., figs. 6, 7.

1901. Macrothrix hirsuticornis, Lilljeborg, l.c., p. 346, pl. lv., figs. 6-14.

The types of this species were taken by G. S. B. in 1864 in a slow-running stream at Ashburn, Sunderland.

D.

Drepanothrix dentata (H. A. Eurén).

1867. Drepanothrix hamata, Brady and Norman, l.c., p. 264, pl. xxii., figs. 5-7.

1901. Drepanothrix dentata, Lilljeborg, l.c., p. 368, pl. lvii., figs. 2-16.

In two of the small lakes at Darden, Northumberland, in 1864, and again at a subsequent visit (A. M. N.)

Acantholeberis curvirostris (O. F. Müller).

1863. Acantholeberis curvirostris, Norman, "On Acantholeberis Lilljeborg." Ann. and Mag. Nat. Hist., ser. 3, vol. xi., p. 2 (separate copy), pl. xi., figs. 1-5, and Trans. Tyneside Nat. Field Club, vol. vi., p. 53, pl. vi., figs. 1-5.

1901. Acantholeberis curvirostris, Lilljeborg, l.c., p. 375, pl. lvii., fig. 17, pl. lviii., figs. 1-17.

This is a species which affects peaty water, and seems never to occur in the valleys. Crag Lake, Northumberland (G. S. B.). In Chartners, Aird, and Darden lakes, and in bog-pools near Winter's Stob, Northumberland (A. M. N.)

N.

FAM. 4.—CHYDORIDÆ

EURYCERCUS LAMELLATUS (O. F. Müller).

1867. Lynceus lamellatus, Norman and Brady, l.c., p. 401 pl. xx., fig. 8.

1901. Eurycercus lamellatus, Lilljeborg, l.c., p. 386, pl. lix., figs. 1-10, and pl. lx., figs. 1-10.

A common species in ponds, lakes, slow rivers, etc. N.D.

CAMPTOCERCUS RECTIROSTRIS Schödler.

1867. Lynceus macrourus, Norman and Brady, l.c. (nec Müller), p. 373, pl. xx., fig. 6, pl. xxi., fig. 2.

1901. Camptocercus rectirostris, Lilljeborg, l.c., p. 402, pl. lxi., fig. 14, pl. lxii., figs. 1-17.

Crag, Greenley, and Grindon lakes, Northumberland (A. M. N.)

ACROPERUS HARPÆ Baird.

1867. Lynceus harpæ, Norman and Brady. l.c., p. 372, pl. xxi., fig. 1.

1901. Acroperus harpæ, Lilljeborg, l.c., p. 418, pl. lxiii., figs. 14-24, pl. lxiv., figs. 1-10.

Common in the clear water of ponds and lakes. N.D.

Alonopsis elongata G. O. Sars.

1867. Lynceus elongatus, Norman and Brady, l.c., p. 374, pl. xviii., fig. 1, pl. xvi., fig. 2.

1901. Alonopsis elongata, Lilljeborg, l.c., p. 434, pl. lxv., figs. 5-20.

This is a lover of moorland lakes and tarns where there is some admixture of peat with the water. In Northumberland it is widely distributed in such situations, occurring in all the Northumberland lakes and many smaller pieces of water. N.

Alona Quadrangularis (O. F. Müller).

1867. Lynceus quadrangularis, Norman and Brady, l.c., p. 377, pl. xxi., fig. 5.

1867. Alena sanguinea, P. E. Müller, Danmarks Cladocera, Naturhist. Tidsskrift, ser. 3, vol. v., p. 177.

1901. Lynceus quadrangularis, Lilljeborg, l.c., p. 448, pl. lxvi., figs. 8–17.

Common in lakes, ponds, and slow streams. N.D.

ALONA AFFINIS (Leydig).

1860. Lynceus affinis, Leydig, Naturgesch. d. Daphniden, p. 223, pl. ix., figs. 65-69.

1867. Alona oblonga, P. E. Müller. Danmarks Cladocera, Naturhist. Tidsskrift, ser. 3, vol. v., p. 175, pl. iii., figs. 22, 23, pl. iv., figs. 1, 2.

1901. Lynceus affinis, Lilljeborg, l.c., p. 455, pl. lxvi., figs. 18-21, pl. lxvii., figs. 1-17, pl. lxviii., fig. 1.

This is Lynceus quadrangularis S. Fischer and Alona quadrangularis of Herrick.

Forge Dam, Sedgefield (A. M. N.); East Belsay Lake (G. S. B.) N.D.

Alona Tenuicaudis G. O. Sars.

1867. Lynceus tenuicaudis, Norman and Brady, l.c., p. 376, pl. xix., fig. 3.

1867. Mona tenuicaudis, P. E. Müller, Danmarks Cladocera, Naturhist. Tidssk., ser. 3, vol. v., p. 179, pl. ii., fig. 20, pl. iii., fig. 24.

1901. Lynceus tenuicaudis, Lilljeborg, l.c., p. 461, pl. lxviii., figs. 2-8.

In a small pond at Morden Moor Farm near Sedgefield (A. M. N.)

Alona Costata G. O. Sars.

- 1867. Lynceus costatus, Norman and Brady, l.c., p. 379, pl. xviii., fig. 2, and pl. xxi., fig. 7.
- 1867. Alona lineata (Schödler), P. E. Müller, Danmarks Cladocera, Naturhist. Tidssk., ser. 3, vol. v., p. 178, pl. iv., figs. 3, 4.
- 1901. Lynceus costatus, Lilljeborg, l.c., p. 465, pl. lxviii., figs. 9-15.

Rothley, Aird, Capheaton, Chartners, Crag and Grindon Lakes, Northumberland; old colliery pond at Bishop Middleham; pond near Houghton-le-Spring, Co. Durham (A. M. N.); Wallington, Rothley, and Belsay Lakes, Northumberland (G. S. B.)

Alona guttata G. O. Sars.

- 1867. Lynceus guttatus, Norman and Brady, l.c., p. 380, pl. xviii., fig. 6, and pl. xxi., fig. 10.
- 1874. Alona parvula, Kurz, Dodekas neuer Cladoceren, &c. (separate copy), p. 44, pl. ii., fig. 8.
- 1874. Alona tuberculata, id. ibid., p. 45, pl. ii., fig. 3.
- 1901. Lynceus guttatus, Lilljeborg, l.c., p. 468, pl. lxviii., figs. 16-26.

Crag and Sweethope Lakes, Northumberland, and in a small pond at East Herrington, Co. Durham (A. M. N.); in ponds at Cullercoats and at Marsden, Co. Durham (G. S. B.)

N.D.

ALONA ROSTRATA Köeh.

- 1867. Lynceus rostratus, Norman and Brady, l.c., p. 394, pl. xix., fig. 1, pl. xxi., fig. 6.
- 1901. Lynceus rostratus, Lilljeborg, l.c., p. 482, pl. lxix., figs. 7-21.

East Lake at Belsay, Northumberland (G. S. B.); river Till at Etal, Northumberland (A. M. N.)

RHYNCHOTALONA FALCATA (G. O. Sars).

- 1862. Harporhynchus falcatus, G. O. Sars, Om de i Omengen af. Christiania forekommende Cladocerer, Forhand. Videns-Selsk. Christiania, 1861, p. 41 (separate copy).
- 1867. Lynceus falcatus, Norman and Brady, l.c., p. 387, pl. xviii., fig. 4, pl. xx., fig. 1.
- 1884. Leptorhynchus falcatus. C. L. Herrick, Final Report on the Crustacea of Minnesota, p. 114, pl. i., fig. 17.
- 1901. Leptorhynchus falcatus, Lilljeborg, l.c., p. 488, pl. lxix., figs. 22-26, pl. lxx., figs. 1-5.
- 1903. Rhynchotalona falcata, Norman, New generic names for some Entomostraca and Cirripedia. Ann. and Mag. Nat. Hist., ser. 7, vol. xi., p. 367.

Sars' generic name *Harperhynchus* being pre-occupied, Herrick substituted *Lepterhynchus*, an unfortunate choice, as the name had been more than once previously used, and therefore Dr. Norman has re-named the genus *Rhynchulatona*.

Greenley Lake, Northumberland (A. M. N.), and Sweethope (G. S. B.)

N.

LEYDIGIA LEYDIGII (Schödler).

- 1860. Lynceus quadrangularis, Leydig (nec Müller), Naturgesch. der Daphniden, p. 221, pl. viii., fig. 50.
- 1863. Alona Leydigii, Schödler, Neue Beiträge zur Naturgesch. d. Cladoceren, p. 27.
- 1874. Leydigia quadrangularis, Kurz, Dodekas neuer Cladoceren (separate copy), p. 52, pl. ii., fig. 2.
- 1901. Leydigia quadrangularis, Lilljeborg, l.c., p. 494, pl. lxx., figs. 6-17, pl. lxxi., figs. 1-3.

Schödler was undoubtedly right in re-naming this species, because the specific name quadrangularis, as used by Leydig, was that of another species described by Müller, and misapplied by Leydig to the present form.

The specimen assigned to Lineau acounts, country by Brady and Norman (l.c., p. 385, pl. xix., fig. 5, pl. xxi., fig. 7), was really the present form, and not that described by Fischer.

8₅

The specific distinction between the two is certainly very slight, but apparently constant.

My discovery and re-discovery of this species I look upon as one of the most curious and remarkable experiences in my life as a naturalist. One afternoon, June 22nd, 1864, I brought home a gathering made in a pond at Lambton Examination proved it in the main to consist of Daphnia pulex; but there floated across the field of the microscope the post-abdomen of a Lynceid which I at once recognised from its peculiar spination as something new to me; but it flashed across me that I had seen somewhere a figure like it. Taking down a MS. book from my library I found in it a tracing made at the Brit. Museum Library of Fischer's figure of Lynceus acanthocercoides. That this species described from Moscow should be here before me in that fragment of a post-abdomen was of course of the highest interest. The whole gathering was therefore passed drop by drop under review in the microscope, and the remainder of the slough or cast skin of the specimen to which the post-abdomen belonged was met with, but no other specimen; and Moscow was its only known home.

Twenty years passed by. I had three or four times brought home gatherings from the Lambton Pond, but the phantom Leydigia had not shown itself again either to myself or, as far as I am aware, to any other British naturalist. Some young friends were coming to me in the evening, and I required living material to show them under the microscope. At the breakfast table I told a nephew who was staying with me the foregoing story, and said we would in the afternoon go to the said pond to get what I required, and perhaps Lerdigia might be found. I went into my library and began to examine a gathering I made ten days before at Seaton Carew, and there was Leydigia! I called up my nephew and remarked how curious it was that it should thus have turned up just after I had been talking about it. In the afternoon we went to the old habitat in Lambton Park, and there again was Leydigia. From two different localities in the same day!

I believe I can explain how it was that my search had before been unsuccessful. The species is a bottom-loving form. I had worked only in the water and among the weeds, while it lay snug below, but the light cast skin of 1864 had floated up and so been taken among the Daphnia (A. M. N.)

Pond near the Bowes House Lodge of Lambton Park; ditches at Seaton Carew (A. M. N.); ditch south side of railway between Hexham and Corbridge, May, 1885 (G. S. B.)

GRAPTOLEBERIS RETICULATA (Baird).

- 1867. Lynceus testudinarius, Norman and Brady, l.c., p. 381, pl. xviii., fig. 7, and pl. xxi., fig. 4.
- 1901. Graptoleberis testudinaria, Lilljeborg, l.c., p. 504, pl. lxxi., figs. 9-14, pl. lxxii., figs. 1-8.

It is Alona esocirostris of Schödler.

Crag, Grindon, Chartners, and Darden Lakes, Northumberland, and Hardwick Lake, Sedgefield (A. M. N.); Belsay Lake, Northumberland; Boldon Flats and Fardingslake, Co. Durham (G. S. B.)

ALONELLA EXCISA (S. Fischer).

- 1854. Lynceus excisus, S. Fischer, Abhand. neue oder nicht genau gekannte Arten Daphniden u. Lynceiden. Bull. Soc. Imp. Nat. de Moscou, p. 428, pl. iii., figs. 11-14.
- 1863. Pleuroxus excisus, Schödler, Neue Beiträge zur Naturgeschichte der Cladoceren, p. 49, pl. ii., fig. 38.
- 1888. *Pleurexus excisus*, Hellich, Die Cladoceren Böhmens, p. 99, fig. 56.
- 1894. Pleuroxus exiguus, Wisenberg-Lund, Grönlands Ferskvandsentomostraca. Middel. naturhist. Foren. i Kjöbenhavn, p. 127, pl. iv., fig. 16 (separate copy).
- 1901. Alonella excisa, Lilljeborg, l.c., p. 510, pl. lxxii., figs. 9-19.
- "Crag, Greenley, Broomley, Chartners, and Darden Lakes, and a pool in the moors at Winter's Stob" (A. M. N.). These

localities were given in our paper of 1867. Probably most of them, if not all, apply to the present species, with which Alonella exigua Lilljeborg was united by us. The differences between the two species according to Lilljeborg's recent work appear to be very slight. The illustrations given by us in 1867 are regarded by Lilljeborg as referable to A. exigua; but we do not now know in what locality the figured specimen was taken.

N.

Alonella exigua (S. Fischer).

- 1853. Lynceus exiguus, Lilljeborg, De Crust. ex Ord. tribus, &c., p. 79, pl. vii., figs. 9, 10.
- 1874. Alonella exigua, Kurz, Dodekas neuer Cladoceren, p. 58, pl. iii., fig. 2.
- 1877. *Pleuroxus exiguus*, Hellich, Die Cladoceren Böhmens, p. 99, fig. 57.
- 1900. Alonella exigua, Lilljeborg, Cladocera Sueciæ, p. 513, pl. lxxii., figs. 20–26.

See under preceding species.

ALONELLA NANA (Baird).

- 1850. Acroperus nanus, Baird, Brit. Entom., p. 130, pl. xvi., fig. 6.
- 1861. Alona pygmæa, G. O. Sars, Om de i omegnen af Christiania forekommende Cladocerer. Forh. Vid.-Selsk. Christiania, 1861, p. 20 (separate copy).

- 1848. Lynceus tenuirostratus, S. Fischer, Uber die in d. Umgeb. von St. Petersburg vorkom. Crust., p. 193, pl. x., fig. 3.
- 1867. Lynceus globosus, Norman and Brady, l.c., p. 398, pl. xx., fig. 5.
- 1901. *Chydorus globosus*, Lilljeborg, l.c., p. 547, pl. lxxv., figs. 18–27, pl. lxxvi., fig. 1.

Crag Lake (A. M. N. and G. S. B.)

N.

CHYDORUS SPHÆRICUS (O. F. Müller).

- 1867. Lynceus sphæricus, Norman and Brady, l.c., p. 399, pl. xxi., fig. 12.
- 1901. Chydorus sphæricus, Lilljeborg, l.c., p. 561, pl. lxxvii., figs. 8–25.

Abundant everywhere.

N.D.

VAR. CŒLATUS Schödler.

Greenley Lake; Sedgefield (A. M. N.); pond on Warden Law (G. S. B.)

Monospilus dispar G. O. Sars.

- 1854. Lynceus tenuirostris, S. Fischer, Bull. de Soc. Imp. de Nat. de Moscou, p. 427, pl. iii., figs. 7-10 (but not Lynceus tenuirostris, S. Fischer, 1851).
- 1861. Monospilus dispar, G. O. Sars. Om de i Omengen af Christ, forkom. Cladocerer, p. 23.
- 1867. Monospilus tenuirostris, Norman and Brady, l.c., p. 403, pl. xix., fig. 2, pl. xx., fig. 9.
- 1901. Monospilus dispar, Lilljeborg, l.c., p. 581, pl. lxxviii., figs. 26-31, pl. lxxix., figs. 1-6.

East Belsay Lake, Northumberland (G. S. B.)

DIVISION II.—GYMNOMERA G. O. Sars

SECTION III.—ONYCHOPODA G. O. Sars

FAM. I.—POLYPHEMIDÆ

POLYPHEMUS PEDICULUS (Linné).

- 1850. Polyphemus pediculus, Baird, Brit. Entom., p. 111, pl. xvii., fig. 1.
- 1901. Pelyphemus fediculus, Lilljeborg, l.c., p. 595, pl. lxxix., figs. 22-31, pl. lxxx., figs. 1-9.

In lakes, Crag, Grindon, Broomley, and Greenley, and Hardwick Lake Sedgefield.

N.D.

Podon intermedius Lilljeborg.

- 1853. Podon intermedius, Lilljeborg, De Crust. ex Ord. tribus Clad., Ostrac. et Cop., &c., p. 161.
- 1867. Podon intermedius, P. E. Müller, Danmarks Cladocera, p. 215, pl. v., fig. 22, pl. vi., figs. 1–4.
- 1901. Podon intermedius, Lilljeborg, l.c., p. 627, pl. lxxxiv., figs. 8-16, pl. lxxxv., figs. 1-6.

Occasionally taken in the tow net.

N.D.

N.

PODON POLYPHEMOIDES (Leuckart).

- 1859. Evadne polyphemoides, Leuckart, Carcinologisches. Archiv f. Naturgesch., 25er Jahrg., p. 262, pl. vii., fig. 5.
- 1862. *Pleopis minutus*, G. O. Sars, Om de i Omengen af Christ. forekom. Cladocerer, p. 46.
- 1865. *Podon Mecznikowii*, Czerniavski, Materialia ad Zoograp. ponticam comparatam, p. 59.
- 1901. Podon polyphemoides, Lilljeborg, l.c., p. 633, pl. lxxxv., figs. 7-11.

First taken on our coasts by G. S. B. in 1866 in the estuary of the Tees, and since frequently off the coasts.

N.D.

EVADNE NORDMANNI S. Lovén.

- 1850. Evadne Nordmanni, Baird, Brit. Entom., p. 114, pl. xvii., fig. 1.
- 1901. Evadne Nordmanni, Lilljeborg, l.c., p. 641, pl. lxxxv., figs. 4-17.

Not rare off the coasts.

N.D.

(The middle of the Northumberland lakes has never been examined. It is not improbable that some of the "plankton" species will reward research there).

ORDER VIII.—OSTRACODA

The following are the chief works referred to in the list of Ostracoda:

- Brady (G. S.). Monograph of Recent British Ostracoda.
 Trans. Linn. Soc., vol. xxvi., 1868.
- 2. Brady (G. S.) and Norman (A. M.). Monograph of the Marine and Freshwater Ostracoda of the North Atlantic and North-Western Europe, Section I., Podocopa. Scient. Trans. Royal Dublin Soc., ser. 2, vol. iv., 1889.
- 3. Brady (G. S.) and Norman (A. M.). Same as above, Pt. II. Scient. Trans. Royal Dublin Soc., ser. 2, vol. v., 1896.

- 4. Müller (G. W.). Zoologica, Heft 30, Deutschlands Süsswasser-Ostracoden, 1900.
- 5. Kaufmann (A.). Cypriden und Darwinuliden (Revue Suisse de Zoologie, vol. viii., 1900).
- 6. Hartwig (W.). Arten der Ostracoden-Unterfamilie Candoninæ der Provinz Brandenburg (Sitz.-Bericht d. Gesellsch. naturf. Freunde zu Berlin), 1901.

SECTION I.—PODOCOPA FAM. 1.—CYPRIDIDÆ

CYPRIA OPHTHALMICA (Jurine).

Common in ditches and ponds and at the margins of lakes.

N.D.

Cypria exsculpta (S. Fischer)=Cypris striclata G. S. Brady =Cypris granulata (the young) D. Robertson.

Seaton Carew, Co. Durham; Newbiggin (A. M. N.); Greenley Lake (G. S. B.) N.D.

Cyclocypris Globosa (G. O. Sars) = Cypris cinerea G. S. Brady.

Newbiggin; Broomley and Crag Lakes (A. M. N.)

N.

Cyclocypris serena (Koch).

1889. Cypria serena, Brady and Norman (2), p. 70.

1896. Cyclocypris serena, Brady and Norman (3), p. 718.

Common in ditches, ponds, and lakes. N.D.

Cyclocypris Lævis (O. F. Müller) = Cypris minuta Baird = Cypris ovum G. S. Brady.

1889. Cypria lævis, Brady and Norman (2), p. 18.

1896. Cyclocypris lavis, Brady and Norman (3), p. 728.

Common everywhere.

N.D.

Cypris fuscata (Jurine)=Cypris fusca and hispida Baird. 1864. Cypris oblonga, G. S. Brady, Trans. Tyneside Nat. Field Club, vol. vi., p. 104, pl. ii., figs. 1-4.

An abundant species in small pieces of water. N.D.

CYPRIS OBLIQUA G. S. Brady.

Rothley and Belsay Lakes, Northumberland (G. S. B.);

Crag Lake (A. M. N.)

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

Cypris reticulata Zaddach=Cypris affinis Fischer and Lilljeborg.

1865. Cypris tessellata, G. S. Brady (partim) (1), p. 366.

1889. Cypris reticulata, Brady and Norman (2), p. 76, pl. viii., figs. 1, 2, pl. xi., figs. 5-7.

Sedgefield (A. M. N.); Fenham and Boldon Flats (G. S. B.) N.D.

CYPRIS VIRENS (Jurine)= C. tristriata Baird.

A common inhabitant of small grassy pools and ditches which dry up in summer.

N.D.

CYPRIS PUBERA O. F. Müller.

1863. Cypris punctillata, Norman, Trans. Tyneside Nat. Field Club, vol. v., p. 145, pl. iii., figs. 11-14.

Taken in great abundance and very fine in the Forge Dam, Sedgefield, in 1861 (A. M. N.); pond at Seaton Marsh, Co. Durham (G. S. B.). It is a rare species. D.

CYPRIS ORNATA O. F. Müller.

The only known British specimens of this species were taken by G. S. B. in a pond near Shotton Hall, Co. Durham.

D.

CYPRIS ELLIPTICA Baird = C. hirsuta S. Fischer.

1889. Cypris elliptica, Brady and Norman (2), p. 75, pl. ix., figs. 5, 6, pl. xi., fig. 12.

In a pond at Foxton Lane, Sedgefield (A. M. N.); and at Stocksfield, where it was found by Mr. H. B. Watson (G. S. B.)
N.D.

Cyprinotus incongruens (Rambohr).

1896. *Cypris incongruens*, Brady and Norman (3), p. 721, pl. lxiv., figs. 17, 18, pl. lxviii., figs. 22, 23 3.

This species seems to like a slight admixture of salt in the water which it frequents. Seaton Delaval, Northumberland; Rainton and Seaton Carew, Co. Durham (A. M. N.) N.D.

Cyprinotus prasinus (S. Fischer).

1889. Cypris prasina, Brady and Norman (2), p. 78.

1896. Cyprinetus prasinus, Brady and Norman (3), p. 722.

Cooling ponds at Monkwearmouth Colliery, and in a salt marsh north of the river Coquet below Warkworth (G. S. B.); Seaton Delaval, Northumberland, and Rainton Meadows, Co. Durham (A. M. N.) This species requires apparently a certain amount of salt in the water which it inhabits. Canon Norman has taken the species in the Botanical Gardens at Palermo, Sicily, whence the type specimens of S. Fischer came.

ILYOCYPRIS BISTRIGATA (Jurine).

- 1866. *Cypris gibba*, Brady (partim) (1), p. 369, pl. xxiv., figs. 47-49.
- 1889. Hyocypris gibba, Brady and Norman (partim) (2), p. 105.
- 1890. *Ilyacypris Bradyi*, G. O. Sars, "Oversigt af Norges Crustaceer. Branch., Ostrac., Cirrip.," p. 50.
- 1891. Ilyocypris gibba, var. repens, Vavra, Monog. der Ostracoden Böhmens, p. 60, fig. 18.
- 1896. *Ilyocypris Bradii*, Brady and Norman (3), p. 728, pl. lxiii., figs. 22, 23, pl. lxviii., figs. 18, 19.
- 1900. *Ilyocypris Bradyi*, G. W. Müller (4), p. 90, pl. xix., figs. 11–19, pl. xx., figs. 17, 18.
- 1900. Hyerypris Bradyi, Kaufmann (5), p. 353, pl. xxiv., figs. 1, 2, pl. xxv., figs. 17, 18.

Dr. A. Kaufmann (Cypriden und Darwinuliden) has divided what used to be considered Cypris giliba into no less than five species; whether these forms are really of specific value further investigations must determine. Meanwhile we include under the name Liverypris bistrigata the forms which have the swimming setae shorter than the following joint, and which are assigned by Kaufmann to two of his species, namely, L. Bradyi and L. iners. Our local specimens are referable only to the former species.

A common species. Among other localities we have specimens from Newbiggin and Seaton Dolaval, Northumberland; Lambton Park, Rainton Meadows, and Seaton Carew, Co. Durham.

N.D.

HERPETOCYPRIS REPTANS (Baird) = Candona virescens G. S. Brady (the young).

Dr. Kaufmann has described several species which are nearly allied to this. Very common, especially in grassy pools and ditches, but also found in lakes.

N.D.

HERPETOCYPRIS STRIGATA (O. F. Müller).

Rare in the British Islands. In the burn at Fulwell Cemetery, Sunderland (G. S. B.)

HERPETOCYPRIS TUMEFACTA (Brady and Robertson).

Warn Burn and the Coquet, Northumberland (Brady and Robertson); near Sunderland (G. S. B.)

N.D.

Prionocypris serrata (Norman)= Cypris bicolor W. Müller= Cypris Zenckeri Toth and Chyzer.

1863. Candona serrata, Norman, Trans. Tyneside Nat. Field Club, vol. v., p. 148, pl. iii., figs. 1-6.

1889. Herpetocypris serrata, Brady and Norman (2), p. 57.

1896. Prionocypris serrata, Brady and Norman (3), p. 725.

1900. *Prionecypris serrata*, Kaufmann (5), p. 297, pl. xx., figs. 10-12, pl. xxi., figs. 22-26.

1900. Cypris serrata, G. W. Müller (4), p. 72, pl. xiv., figs. 3, 11, 14.

Very abundant in the Forge Dam at Sedgefield (A. M. N.); Fardingslake, near Marsden (G. S. B.)

ILYODROMUS ROBERTSONI (Brady and Norman).

1889. Erpetocypris Robertsoni Brady and Norman (2), p. 88, woodcut.

1896. Hyodromus Robertsoni, Brady and Norman (3), p. 724.

In a shallow ditch by the side of the road between Haydon Bridge and Staward (G. S. B.)

Cypridopsis aculeata (O. G. Costa).

1863. Cypris aculeata, Norman, Trans. Tyneside Nat. Field Club, vol. v., p. 147, pl. iii., figs. 7-9.

C. aculeata Costa from Naples was subsequently given the very same name by Lilljeborg from Sweden.

Seaton Carew and Cowpen Marshes, Co. Durham; New-biggin (A. M. N.); Monkwearmouth Colliery Pond, Hylton Dene, and Warkworth (G. S. B.)

N.D.

Cypridopsis villosa (Jurine).

Very abundant in the Forge Dam, Sedgefield; Rainton Meadows, Co. Durham; Newbiggin (A. M. N.); Belsay East Lake (now drained) and near Crag Lake; Silksworth, and Fulwell (G. S. B.)

N.D.

PIONOCYPRIS VIDUA (O. F. Müller).

1896. *Pionocypris vidua*, Brady and Norman (3), p. 726. Common in small ponds of clean water, and in lakes. N.D.

PIONOCYPRIS OBESA (Brady and Robertson).

1895. *Pionocypris obesa*, Brady and Norman (3), p. 726. Fulwell Cemetery, near Sunderland (G. S. B.)

PROTEOCYPRIS SALINA G. S. Brady.

1907. Proteocypris salina, Brady (G. S.), Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle-upon-Tyne, new ser., vol. i., p. 334, pl. x., figs. 1-12.

This species was described from specimens taken in a saltwater pond at Amble, Northumberland (G. S. B.)

POTAMOCYPRIS FULVA G. S. Brady.

Fulwell Cemetery, and near the mouths of several rivers in Northumberland—Warn Burn, rivers Coquet, Wansbeck, and Blyth (G. S. B.)

NOTODROMAS MONACHA (O. F. Müller).

Fishburn, Co. Durham (A. M. N.); many places in the counties of Northumberland and Durham (G. S. B.)

N.D.

CANDONA CANDIDA (O. F. Müller).

Foreign authors (Hartwig, Kaufmann, and G. W. Müller) have described a large number of forms as species allied to C. candida and C. compressa; and certainly either C. candida is an extremely variable form or several species have in the past been improperly associated under that name.

Very common in ditches, ponds, and lakes. N.D.

CANDONA NEGLECTA G. O. Sars.

- 1887. Candona neglecta, G. O. Sars, Nye Bidrag til Kundskaben om Middelhavets Invert. Fauna, IV., Ostracoda Mediterranea, p. 279, pl. xv., figs. 5-7, pl. xix., figs. 1-21.
- 1889. Candona candida, var. neglecta, Brady and Norman (2), p. 99, pl. x., figs. 18-21.
- 1891. Candona fabæformis, Vavra (not Fischer), Mon. der Ostracoden Böhmens, p. 45.
- 1898. Candona Vavrai, Hartwig, "In Candona fabæformis stecken drei verschiedene Arten." Zoolog. Anzeiger, vol xxi., p. 566.
- 1900. Candona neglecta, Kaufmann (5), p. 387, pl. xxix., figs. 1-5, pl. xxx., figs. 12-18, pl. xxxi., fig. 21.
- 1900. Candona neglecta, G. W. Müller (4), p. 17, pl. ii., figs. 4-6, 13-18.

Chester Road, Sunderland (G. S. B.)

Further research will probably prove that this species, hitherto confounded with *C. candida*, is widely distributed in the two counties.

CANDONA CLAVIFORMIS Brady and Norman.

1889. Candona candida, var. claviformis, Brady and Norman, Mon. Marine and Freshwater Ostracoda, &c. Trans. Roy. Dublin Soc., ser. 2, vol. iv., p. 98, pl. x., fig. 1 &.

Taken several times in years 1859-68 in a pond in a field adjoining the Rectory at Sedgefield, Co. Durham, and subsequently near Seaton Delaval (A. M. N.). The two sexes will shortly be described and figured in a paper which Dr. Brady has in preparation on the genus Candona.

N.D.

CANDONA CAUDATA Kaufmann.

- 1892. Candona acuminata, Kaufmann, Die Ostracoden der Umgebung Berns. Mittlg. d. naturf. Ges. Bern, p. 70.
- 1900. Candona caudata, Kaufmann, Cypriden und Darwinuliden der Schweiz. Revue Suisse de Zoologie, vol. viii., p. 365, pl. xxiv., figs. 16-20, pl. xxvi., figs. 17-23.

East Lake at Belsay, Northumberland (now drained and built over) (G. S. B.)

CANDONA ZETLANDICA (Brady).

- 1868. Cytheridea zetlandica, Brady (1), p. 428, pl. xxviii., figs. 42-46.
- 1870. Candona candida, var. tumida, Brady and Robertson, Ann. and Mag. Nat. Hist., ser. 4, vol. vi., p. 16, pl. ix., figs. 13–15.
- 1889. Candona candida, var. tumida, Brady and Norman (2), p. 99, pl. x., figs. 14-17.
- 1898. Candona Weltneri, Hartwig, Eine neue Candona aus der Provinz Brandenburg. Sitz. der Gesellsch. naturfor. Freunde zu Berlin, vol. xxi., p. 50.
- 1900. Candona Weltneri, G. W. Müller (4), p. 16, pl. iii., figs. 3, 4, 13, 14, 17-20.

Rivers Coquet, Blyth, and Wansbeck, and Wark Burn, Belsay East Lake, Seaton Burn, and Ahmouth, Northumberland (G. S. B.)

CANDONA LACTEA Baird.

Sedgefield and Seaton Carew Marshes; Newbiggin (A. M. N.); Budle Bay and rivers Aln and Coquet (G. S. B.)

CANDONA ROSTRATA Brady and Norman.

This is not *C. rostrata* G. W. Müller which is *C. marchica* Hartwig.

Newbiggin (A. M. N.)

N.

CANDONA COMPRESSA (Koch).

- 1864. Candona albicans, G. S. Brady, Trans. Tyneside Nat. Field Club, vol. vi., p. 107, pl. iii., figs. 6-10 (the young).
- 1868. Candona compressa, Brady (1), p. 382, pl. xxvi., figs. 22-27.
- 1889. Candona pubescens, Brady and Norman (2), p. 101, pl. xii., figs. 32-37.
- 1896. Candona compressa, Brady and Norman (3), p. 728. 1901. Candona compressa, Hartwig (6), p. 104.

Sedgefield, Seaton Carew Marshes, Rainton Meadows, pond in Lumley Dene (A. M. N.), Sunderland (G. S. B.) D.

CANDONA ZENCKERI G. O. Sars.

- 1890. Candona Zenckeri, G. O. Sars, "Oversigt. af Norges Crustaceer, II., Branch., Ostrac., Cirrip." Vidensk.-Selsk. Forhand., p. 66.
- 1896. Candona Zenckeri, Brady and Norman (3), p. 739, pl. lxiii., fig. 25, pl. lxviii., figs. 12, 13.

The only specimens as yet known in Great Britain were taken in a pond near Ferry Hill (A. M. N.)

D.

CANDONA STAGNALIS G. O. Sars.

- 1890. Candona stagnalis, G. O. Sars, "Oversigt. af Norges Crustaceer, II., Branch., Ostrac., Cirrip." Vidensk.-Selsk. Forhand., p. 69.
- 1891. Candona ambigua, T. Scott, "Invert. Fauna of Inland Waters of Scotland." Ninth Rep. Fish. Board Scotland, p. 277, pl. iv., figs. 7 a-c 3.
- 1896. Candona stagnalis, Brady and Norman (3), p. 729, pl. lxviii., figs. 14-17.
- 1900. Candona rara, G. W. Müller (4), p. 22, pl. v., fig. 1, pl. vi., figs. 2, 3, 14-16.
- 1901. Candona pubescens, Hartwig (6), p. 96.

Found in a pool near Broomley Lake, Northumberland (A. M. N.)

CANDONOPSIS KINGSLEII (Brady and Robertson).

- 1889. *Candona Kingsleii*, Brady and Norman (2), p. 102, pl. ix., figs. 19-22, pl. xiii., fig. 19.
- 1891. Candonopsis Kingsleii, Vavra, Monog. der Ostracoden Böhmens, p. 54.
- 1900. Candonopsis Kingsleii, G. W. Müller (4), p. 38, pl. vi., figs. 23-28, pl. vi., figs. 22-25.
- 1900. Candonopsis Kingsleii, Kaufmann (5), p. 357, pl. xxiv., figs. 8-11, pl. xxvi., figs. 1-9, pl. xxxi., fig. 17.

N.

1901. Candonopsis Kingsleii, Hartwig (6), p. 127.

Crag Lake, Northumberland (A. M. N.)

PONTOCYPRIS MYTILOIDES (Norman).

Not rare in the littoral and laminarian zones. N.D.

PONTOCYPRIS ACUPUNCTATA	G. S. Brady.
-------------------------	--------------

Budle Bay, Northumberland, and off Marsden, Durham, 10 fathoms (G. S. B.)

N.D.

PONTOCYPRIS TRIGONELLA G. O. Sars.

This species is apparently scarce on this coast. Budle Bay, Northumberland (G. S. B.)

ARGILLŒCIA CYLINDRICA G. O. Sars.

Off Seaham and Marsden (G. S. B.)

D.

ARGILLECIA PROPINQUA G. S. Brady.

1903. Argillacia propinqua, G. S. Brady, Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle, new ser., vol. i., p. 7, pl. ii., figs. 1-8.

Twenty-five miles east of Alamouth in 59 fathoms (G. S. B.) N.

FAM. 2.—CYTHERIDÆ

CYTHERE LUTEA O. F. Müller.

Abundant between tidemarks.

N.D.

Cythere Pellucida Baird=Cythere castanea G. O. Sars and Brady (olim.)

Common in salt-marshes and estuaries.

N.D.

Cythere confusa Brady and Norman=Cythere peliucida Brady et auct. (not Baird).

Dredged in comparatively deep water, 25-46 fathoms, and also common on muddy ground in estuaries and tidemarks.

N.D.

Cythere Porcellanea G. S. Brady.

More frequently found than the last in estuaries, and dredged in shallow water.

CYTHERE TENERA G. S. Brady.

Generally dredged, but has been found by G. S. B. between tidemarks at Whitley and Cullercoats.

N.D.

Cythere semipunctata G. S. Brady.

Budle Bay and Seaton Sluice, Northumberland, and off the coast of Durham (G. S. B.) N.D.

ioi H

CYTHERE CRISPATA G. S. Brady.

Off Marsden, 10 fathoms (G. S. B.)

D.

CYTHERE GIBBOSA Brady and Robertson.

Budle Bay and several estuarine situations on the Northumberland coast (G. S. B.). The Tweed above Berwick; river Lyne near Newbiggin; and marshes at Seaton Carew (A. M. N.).

CYTHERE ALBOMACULATA Baird.

Common between tidemarks, and recorded by G. S. B. from a freshwater lake at Bolam, Northumberland.

The Bolam habitat must be looked upon as doubtful; a renewed search there has resulted in failure to find the species, and it is possible that it found its way accidentally into the earlier gathering.

N.D.

CYTHERE ROBERTSONI G. S. Brady.

Budle Bay, Northumberland; Sunderland, tidemarks, and in several places off the Durham coast in 29-55 fathoms (G. S. B.); Seaton Sluice (A. M. N.)

N.D.

CYTHERE LIMICOLA (Norman).

1866. Cythereis limicola, Norman, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 20, pl. vi., figs. 1–4. Confined to the coralline zone, but not rare at such a depth off the coast.

Cythere cuneiformis G. S. Brady.

More generally found in 15-40 fathoms, but also occurs in several estuarine localities in Northumberland, and has been found between tidemarks on mud-covered rocks at Whitley (G. S. B.); Seaton Delaval (A. M. N.)

N.D.

CYTHERE NAVICULA (Norman).

Budle Bay, Northumberland (G. S. B.)

N.

Cythere villosa (G. O. Sars).

Among small weeds between tidemarks in estuaries, and more rarely dredged.

The specimens referred to *C. borealis* Brady taken at Seaton Carew, belong really to *C. villosa*. N.D.

CYTHERE QUADRIDENTATA Baird.

Occasionally occurring in deep water off the coast. N.D.

CYTHERE EMACIATA G. S. Brady.

Found under similar circumstances to the last, but much rarer.

N.D.

CYTHERE TUBERCULATA (G. O. Sars).

Frequent in deep water. On some parts of our coasts it is found living between tidemarks, but has not yet occurred under such circumstances on the north-east coast.

N.D.

CYTHERE CONCINNA Rupert Jones.

Occasionally occurring in deep water.

N.D.

CYTHERE FINMARCHICA (G. O. Sars).

Another deep water form which has been found off the coasts both of Northumberland and Durham.

N.D.

CYTHERE ANGULATA (G. O. Sars).

Found off the coast in deep water, but rare.

N.D.

CYTHERE DUNELMENSIS (Norman).

1865. Cythereis dunelmensis, Norman, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 22, pl. vii., figs. 1-4.

A fine species which is not rare in deep water off the north-east coasts.

N.D.

CYTHERE JONESH (Baird).

1865. Cythereis Jonesii, Norman, Nat. Hist. Trans Northumberland and Durham, vol. i., p. 21, pl. vii., figs. 5-8.

Common in deep water, and the most beautiful representative of the genus in our fauna.

N.D.

LIMNICYTHERE INOPINATA (Baird).

Hardwick Lake, Sedgefield, and Raby and Lambton Parks (A. M. N.); Fulwell Cemetery, Gibside, and in a millstream at Hedworth, Co. Durham, and in East Belsay Lake, Northumberland, and in many estuarine localities (G. S. B.) N.D.

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

CYTHERIDEA PAPILLOSA Bosquet.

1865. Cythere debilis, Norman, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 15, pl. v., figs. 5-8.

In deep water, somewhat local, but common when found.

N.D.

Cytheridea punctillata G. S. Brady.

Seaton Carew (G. S. B.)

D.

CYTHERIDEA ELONGATA G. S. Brady.

On muddy rocks at low-water mark at Seaton Carew (G. S. B.)

Cytheridea Torosa (Rupert Jones).

1864. Cyprideis torosa, Brady, Trans. Tyneside Nat. Field Club, vol. vi., p. 108, pl. iii., figs. 11-23.

1868. Cytheridea littoralis, Brady, Nat. Hist. Trans. Northumberland and Durham, vol. iii., p. 6.

In brackish water, Warkworth, Alnmouth, Cambois, Seaton Sluice, and Jarrow Slake (G. S. B.); Hartlepool (A. M. N.). Inland in fresh water in the Forge Dam at Sedgefield (A. M. N.); and at Belsay (G. S. B.)

N.D.

EUCYTHERE DECLIVIS (Norman).

1865. Cythere declivis, Norman, Nat. Hist. Trans. North-umberland and Durham, vol. i., p. 16, pl. v., figs. 9–12.

In deep water off the coast, but not common. Both the varieties argus Sars and anglica Brady are found upon the coast.

N.D.

KRITHE BARTONENSIS (Rupert Jones).

Taken by G. S. B. off both the Northumberland and Durham coasts in 30-60 fathoms, but very local.

N.D.

Loxoconcha impressa (Baird).

Frequent in rock pools and estuaries, and in moderate depths off the coast. N.D.

LOXOCONCHA VIRIDIS (O. F. Müller).

This is Cythere rhomboidea S. Fischer and Loxoconcha elliptica G. S. Brady.

Essentially a brackish water species. Rivers Aln, Coquet, Wansbeck, and Blyth (G. S. B.); Seaton Sluice and Hartlepool (A. M. N.) N.D.

LOXOCONCHA MULTIFORA (Norman).

1865. Cythere multifora, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 18, pl. vi., figs. 13-16.

Off Holy Island, 1864 (A. M. N.); Budle Bay, Northumberland (G. S. B.)

Loxoconcha guttata (Norman).

1865. Cythere guttata, Norman, Nat. Hist. Trans. North-umberland and Durham, vol. i., p. 19, pl. vi., figs. 9-12.

1870. Loxoconcha granulata, G. S. Brady, Nat. Hist. Trans. Northumberland and Durham, vol. iii., p. 368, pl. xiii., figs. 5-7.

Dredged in 1864 off Holy Island, and also 10-15 miles off Seaham in about 40 fathoms (A. M. N.); 29 miles E. of Alnmouth in 59 fathoms, and several places off the Durham coast in 20-30 fathoms (G. S. B.)

LOXOCONCHA TAMARINDUS (Rupert Jones).

1865. Cythere lævata, Norman, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 18, pl. v., figs. 13–16.

Off Holy Island (A. M. N.): Northumberland and Durham coasts in tide-pools and in 30-40 fathoms, also in estuaries as Budle Bay and river Blyth (G. S. B.)

N.D.

LOXOCONCHA PUSILLA Brady and Robertson.

Budle Bay and rivers Wansbeck and Blyth, Northumberland (G. S. B.); Seaton Delaval (A. M. N.)

LOXOCONCHA FRAGILIS G. O. Sars.

Budle Bay, Northumberland (G. S. B.)

XESTOLEBERIS AURANTIA (Baird).

Common between tidemarks and in estuaries. In 1891 G. S. B. took it at 29 miles E. of Alnmouth in 59 fathoms.

N.D.

N.

XESTOLEBERIS DEPRESSA G. O. Sars.

The last is usually a tidemark species; this on the contrary is an inhabitant of the ultra-littoral region, and descends to deep water, where it is not uncommon.

N.D.

CYTHERURA GIBBA (O. F. Müller).

Berwick-on-Tweed and Seaton Sluice, fine and abundant (A. M. N.): near the mouth of several Northumberland rivers (G. S. B.)

CYTHERURA CORNUTA G. S. Brady.

Berwick-on-Tweed (A. M. N.); between tidemarks at Boulmer, Northumberland (G. S. B.) N.

Cytherura sella G. O. Sars.

This is C. cuneata & and C. flavescens & of Brady.

Common between tidemarks and in estuaries.

N.D.

Cytherura acuticostata G. O. Sars.

Tidemarks, but not common; also river Blyth and off Holy Island; Hawthorn and Castle Eden in 20 fathoms (G. S. B.) N.D.

Cytherura striata G. O. Sars.

Cytherura quadrata Norman is the female of this species.

Common between tidemarks, amidst the fine weeds and N.D. Corallina; as well as dredged.

CYTHERURA ANGULATA G. S. Brady.

Tidemarks, and dredged, but a much scarcer species than the last; also in estuaries, as those of the rivers Blyth and Wansbeck (G. S. B.); Seaton Delaval, tidemarks (A. M. N.)

N.D.

CYTHERURA UNDATA G. O. Sars.

This is seldom abundant, but distributed; more usually in the coralline zone, but also in estuaries, as those of the rivers Wansbeck and Blyth (G. S. B.) N.D.

CYTHERURA PRODUCTA G. S. Brady.

Off the Durham coast, and at the mouth of the Aln (G. S. B.) N.D.

CYTHERURA NIGRESCENS (Baird).

The commonest Cytherura between tidemarks, where it may be met with almost everywhere. N.D.

CYTHERURA CONCENTRICA Brady, Crosskey and Robertson. Seaton Delaval and Hartlepool (G. S. B.) N.D. Cytherura similis G. O. Sars.

This is Cytherura Sarsii Brady and Cytherura propinqua Brady and Robertson.

Seaton Delayal, tidemarks (A. M. N.); Boulmer; off Seaham Harbour; and at low-water mark at Seaton Carew (G. S. B.)
N.D.

CYTHERURA FULVA Brady and Robertson.

In 20-30 fathoms off the Durham coast, and between tidemarks at Boulmer, Northumberland (G. S. B.); Seaton Delaval, between tidemarks (A. M. N.)

N.D.

CYTHERURA CLATHRATA G. O. Sars.

Between tidemarks at Whitley and Seaton Sluice, and dredged off Hawthorn in 20 fathoms (G. S. B.) N.D.

CYTHERURA CELLULOSA (Norman).

1865. Cythere cellulosa, Norman, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 22, pl. v., figs. 17–20, and pl. vi., fig. 17.

Between tidemarks and dredged, not rare.

N.D.

CYTHEROPTERON LATISSIMUM (Norman).

1865. Cythere latissima, Norman, Nat. Hist. Trans. North-umberland and Durham, vol. i., p. 19, pl. vi., figs. 5–8.

Off Holy Island, and on the Dogger Bank, and off Seaham (A. M. N.); twenty-nine miles E. of Alnmouth in 49-60 fathoms, and off Souter Point in 30-39 fathoms, abundant and fine (G. S. B.)

N.D.

CYTHEROPTERON ALATUM G. O. Sars.

Very rare, 30 miles off Sunderland in 40-45 fathoms (G. S. B.)

Cytheropteron nodosum G. S. Brady.

On the Dogger Bank (A. M. N.); mouth of the Wansbeck river and off the coast of Durham (G. S. B.)

N.D.

Bythocythere turgida G. O. Sars.

1870. Bythocythere turgida, G. S. Brady, Nat. Hist. Trans. Northumberland and Durham, vol. iii., p. 372, pl. xiii., figs. 1-4.

Twenty-nine miles E. of Alumouth in 59 fathoms: off Source Point in 30-40 fathoms (G. S. B.) N.D. Bythocythere constricta G. O. Sars.

Off the Durham coast in 20-35 fathoms, and also off Northumberland (G. S. B.)

BYTHOCYTHERE SIMPLEX (Norman).

1865. Cythere simplex, Norman, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 17, pl. v., figs. 1-4.

The types were dredged in 1862 about 100 miles off Tynemouth, and it was again taken in 1864 off Holy Island (A. M. N.). In several places off the Durham coast in 20–40 fathoms, twenty-nine miles E. of Alnmouth in 40–60 fathoms, and off Souter Point in 30–40 fathoms (G. S. B.). Living specimens in very fine condition were taken during the dredging excursions of 1901–2, generally associated with equally fine captures of *Cythere Fonesii*. N.D.

PSEUDOCYTHERE CAUDATA G. O. Sars.

Occasionally dredged, but not common.

N.D.

Sclerochilus contortus (Norman).

Off the coasts in 20-46 fathoms, and also between tidemarks.

N.D.

CYTHERIDEIS SUBULATA G. S. Brady.

Boulmer, near Whitley, Northumberland; Sunderland and Seaton Carew (G. S. B.); Seaton Delaval (A. M. N.); tidemarks and shallow water.

N.D.

Cytherois Fischeri (G. O. Sars).

1870. Paradoxostoma Fischeri, G. S. Brady, Nat. Hist. Trans. Northumberland and Durham, vol. iii., p. 362, pl. xii., figs. 10, 11.

Budle Bay, Boulmer, Seaton Delaval, Northumberland; Sunderland; off Marsden and Seaham 33-35 fathoms (G. S. B.); Warkworth (A. M. N.)

FAM. 3.—PARADOXOSTOMATID.E

PARADOXOSTOMA VARIABILE (Baird).

Abundant between tidemarks and in shallow water. N.D.

Tidemarks Budle Bay, Boulmer, and Seaton Carew; 20

Muddy rocks at low water, Whitley (G. S. B.); Seaton

Seaton Sluice and Budle Bay, Northumberland: off the

1870. Xiphichilus tenuissimus, G. S. Brady, Nat. Hist. Trans. Northumberland and Durham, vol. iii., p. 369,
pl. xii., figs. 6–9, and pl. xiv., figs. 5–10.
Fourteen miles off Seaham, 35 fathoms, and 5-17 miles off
Souter Point, 30-60 fathoms (G. S. B.)

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

SECTION II.—MYODOCOPA FAM. I.—ASTEROPIDÆ

ASTEROPE TERES (Norman).

Fourteen miles off Seaham in 35 fathoms (G. S. B.) D.

ASTEROPE MARIÆ (Baird).

About 30 miles off Alnmouth in 39 fathoms (G. S. B.) N.

FAM. 2.—CYPRIDINIDÆ

PHILOMEDES BRENDA (Baird).

Forty to fifty miles off Tynemouth, and off the coast of Durham near the Dogger Bank (A. M. N.); 14 miles off Seaham in 35 fathoms, and 25 miles east of Alnmouth in 50 fathoms (G. S. B.)

N.D.

PHILOMEDES INTERPUNCTA (Baird).

Off Northumberland in deep water (A. M. N.); off Marsden, Hawthorn, and Sunderland, 20-45 fathoms (G. S. B.) N.D.

SECTION III.—CLADOCOPA FAM. 1.—POLYCOPIDÆ

Polycope orbicularis G. O. Sars.

Several places off the coast of Durham (G. S. B.) N.

SECTION IV.—PLATYCOPA FAM. 1.—CYTHERELLIDÆ

Cytherella serrulata Brady and Norman.

About 30 miles off Alnmouth in 39 fathoms (G. S. B.) N.

Cytherella abyssorum G. O. Sars.

This is C. scotica G. S. Brady.

Fourteen miles off Seaham in 35 fathoms (G. S. B.) D.

ORDER IX.—COPEPODA

For information as to the British species of Copepoda the following works will be found useful. These are referred to in the synonymy by the numerals attached to each.

1. Baird (W.). Natural History of the British Entomostraca, London, Ray Society, 1850.

- 2. Claus (Dr. C.). Die frei lebenden Copepoden, mit besonderer Berücksichtigung der Fauna Deutschlands, der Nordsee und des Mittelmeeres, Leipzig, 1863.
- 3. Brady (G. S.). A monograph of the free and semi-parasitic Copepoda of the British Islands, 3 vols., London, Ray Society, 1878–80.
- 4. Brady (G. S.). A revision of the British species of freshwater Cyclopidæ and Calanidæ. Nat. Hist. Trans. Northumberland and Durham, vol. xi., 1891.
- Giesbrecht (Dr. Wilhelm). Systematik und Faunistik der pelagischen Copepoden des Golfes von Neapel und der angrenzenden Meeres-Abschnitte, Berlin, 1892.
- 6. Sars (G. O.). An Account of the Crustacea of Norway, vols. iv., v., Copepoda, 1904-9 (in course of publication).
- 7. Norman (A. M.) and Scott (T.). The Crustacea of Devon and Cornwall, 1906.
 - Scott (T. and A.). Numerous papers chiefly in the Annual Reports of the Fishery Board for Scotland.

The classification here adopted for the Copepoda is based chiefly on that used by Professor G. O. Sars in his work on the "Crustacea of Norway" now in course of publication.

SECTION I.—CALANOIDA

FAM. I.—CALANIDÆ

CALANUS SEPTENTRIONALIS (H. Goodsir).

- 1843. Cetochilus septentrionalis, Goodsir, Edinburgh New Philos. Journ., xxxv., p. 336, pl. vi., figs. 1-11.
- 1863. Cetochilus helgolandicus, Claus (2), p. 171, pl. xxvi., figs. 2-9.
- 1878. Calanus finmarchicus, Brady (3), vol. i., p. 38, pl. i., figs. 1-12.
- 1901. Calanus helgelandicus, G. O. Sars (6), vol. iv., p. 11, pl. iv.
- 1906. Cetechilus septentrionalis, Norman and Scott (7), p. 126.

This species, hitherto referred by most authors to *Monoculus finmarchicus* Gunner, is considered by Professor G. O. Sars to be distinct, Gunner's description referring to a closely allied form which is chiefly Arctic in its distribution, and differs in its greater size and in some not very important structural details.* So far as we at present know the true *C. finmarchicus* does not occur in our district. *C. septentrionalis*, on the contrary, is often found in immense numbers, usually near the surface in the open sea, but often also in pools of the littoral zone where it has doubtless been left behind by the retreating tide.

N.D.

FAM. 2.—PSEUDOCALANIDÆ

PSEUDOCALANUS ELONGATUS Boeck.

- 1865. Calanus Clausii, Brady, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 33, pl. i., figs. 1, 11-13.
- 1878. Pseudocalanus elongatus, Brady (3), vol. i., p. 45 pl. iii., figs. 1-9.

Very common both in the open sea and in tidal pools. N.D.

FAM. 3.—CENTROPAGIDÆ

CENTROPAGES TYPICUS Kröyer.

- 1863. Ichthyophorba denticornis, Claus (2), p. 199, pl. xxxv., figs. 1, 3-9.
- 1865. Ichthyophorba denticornis, Brady, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 40, pl. iv., figs. 1–6.
- 1878. Centropages typicus, Brady (3), vol. i., p. 65, pl. viii., figs. 1-10.
- 1901. Centropages typicus, G. O. Sars (6), vol. iv., p. 75, pls. xlix., l., li.

^{*} The British form was, however, described by H. Goodsir in 1843 under the specific name *septentrionalis*, and as pointed out in the "Crustacea of Devon and Cornwall," that name must be adopted if the still earlier one used by Gunner be held to apply to a different species.

CENTROPAGES HAMATUS (Lilljeborg).

1865. Ichthyophorba hamata, Brady, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 39, pl. iv., figs. 7–10.

1878. Centropages hamatus, Brady (3), vol. i., p. 67, pl. viii., figs. 11-13.

1901. Centropages hamatus, G. O. Sars (6), vol. iv., p. 76, pl. lii.

The two foregoing species are of frequent occurrence in the open sea; less frequent in tidal pools.

N.D.

ISIAS CLAVIPES Boeck.

1878. Isias clavipes, Brady (3), vol. i., p. 62, pl. vii., figs. 3-13.

1901. Isias clavipes, G. O. Sars (6), vol. iv., p. 79, pls. liii., liv.

This species, though generally distributed round the British Islands, had not been noted in our district until quite recently; but in several tow-net collections made during the summer of 1905 it occurred rather plentifully.

N.D.

FAM. 4.—DIAPTOMIDÆ

DIAPTOMUS CASTOR (Jurine).

1875. *Diaptomus castor*, Brady (in part) (3), vol. i., p. 59, pl. vi., figs. 6–13, and (6) p. 92, pl. xi., figs. 1–6.

1901. Diaptomus castor, G. O. Sars (6), vol. iv., p. 85, pls. lvii., lviii.

This species is found for the most part in ponds and ditches—not so often in larger sheets of water; not common in our district, nor perhaps in any other part of the country. In ponds at Shotton, Sunderland, and Wardley (G. S. B.); Broomley Lake (A. M. N.)

Diaptomus gracilis G. O. Sars.

1862. Diaptomus gracilis, G. O. Sars, Oversigt af de indenlandske Ferskvandscopepoder, p. 9.

1891. *Diaptomus gracilis*, Brady (4), p. 94, pl. xi., figs. 7-9, pl. xii., figs. 1-8.

1901. Diaptomus gracilis, G. O. Sars (6), vol. iv., p. 92, pl. lxiii.

Syn.: Diaptomus Westwoodii, Lubbock.

An almost exclusively lacustrine species which occurs abundantly in most of the English and Scottish lakes, and generally in ponds and still water. Very plentiful in Tindale and Talkin Tarns, which are just over the border of our restricted district, also in Crag Lake and Chartners Lake (A. M. N.). In Talkin Tarn we have seen the net come up from some few feet below the surface quite alive with shoals consisting chiefly of this species and *Eurytemora affinis* (G. S. B.)

FAM. 5.—TEMORIDÆ

TEMORA LONGICORNIS Müller.

1865. Temora longicornis, Brady, Nat. Hist. Trans. North-umberland and Durham, vol. i., p. 36, pl. i., fig. 15, and pl. ii., figs. 1–10, and (3) vol. i., p. 54, pl. iii., figs. 10–19.

Syn.: Temora finmarchica, Baird; and Diaptomus longicaudatus, Lubbock.

This is one of the most abundant of the marine Copepoda. It occurs both in the littoral zone and in the open sea, more plentifully at most seasons than any other of the Calanoida, excepting, perhaps, *Calanus septentrionalis*. Easily recognised by its very long and slender caudal appendages. N.D.

EURYTEMORA VELOX (Lilljeborg).

1865. Temora velox, Brady, Nat. Hist. Trans. Northumberland and Durham, vol. i., p. 38, pl. i., fig. 16, and pl. iii., figs. 1–11, and (3) vol. i., p. 56, pl. vi., figs. 1–5.

1891. Eurytemora Clausi, Brady (4), p. 105, pl. xiii., figs. 1-5.

1901. Eurytemora velox, G. O. Sars (6), vol. iv., p. 100, pls. lxvii., lxviii.

Common, and often very abundant, in the pools of salt marshes, and (in other parts of the country) occasionally in fresh water. Not noticed in this district except in brackish water. Hylton Dene (habitat now destroyed), Scaton Sluice, Alnmouth, Hartlepool, &c. (G. S. B.) N.D.

EURYTEMORA AFFINIS (Poppe).

- 1885. Temorella affinis. Poppe. Die freilebenden Copepoden des Jadebusens (Abhandl. des naturwissenschaft. Vereins zu Bremen, ix. Band), p. 184, Taf. vi., figs. 22-28.
- 1888. Temorella affinis, Poppe, var. hirundeides. Nordquist, Die Calaniden Finlands, Helsingfors, p. 48, Taf. iv., figs. 5–11.
- 1891. Eurytemora affinis, Brady (4), p. 107, pl. xiii., figs. 6-9.
- 1901. Eurytemora hirundoides, G. O. Sars (6), vol. iv., p. 102, pl. lxix.

Between the typical *Temorella affinis* and the variety *hirundoides*—promoted by Prof. G. O. Sars to the rank of a species—the differences seem to be of degree only, depending upon the amount of development of the posterior angles of the metasome, the hirsute furniture of the furca and some other very slight variations. It seems better to look upon all these forms as belonging to one and the same species. Our only local record is "brackish water ditches at Hartlepool" (A. M. N.)

FAM. 6.—METRIDHDÆ

METRIDIA LUCENS Boeck.

- 1878. Metridia armata, Brady (3), vol. i., p. 42, pl. ii., figs. 1–12, vol. ii., pl. lvi., figs. 19, 20.
- 1892. Metridia hibernica, Giesbrecht (5), p. 345, pl. xxxii., fig. 11, pl. xxxiii., figs. 2, 12, 16, 22, 28, 36, 39.
 - Syn.: Paracalanus hibernicus Brady and Robertson.

The British species assigned in the Ray Society Monograph to *Metridia armata* Boeck is said by G. O. Sars not to belong to that species, but to *M. lucens* Boeck. We therefore adopt that view, and are able to include it as taken off North Sunderland, and also three miles off Ryhope (G. S. B.) N.D.

FAM. 7.—PSEUDOCYCLOPIDÆ

PSEUDOCYCLOPS CRASSIREMIS Brady.

1878. Pseudocyclops crassiremis, Brady (3), vol. i., p. 82, pl. vii., figs. 1, 2, pl. xii., fig. 14.

The type of this species was taken off Seaham Harbour in a depth of twenty to thirty fathoms—one specimen only. D.

FAM. 8.—PONTELLIDÆ

Anomalocera Patersonii Templeton.

- 1850. Anomalocera Patersonii, Baird (1), p. 229, pl. xxvii., figs. 1a-i, 2a-c.
- 1863. Irenœus Patersonii, Claus (2), p. 206, pl. ii., fig. 1, pl. xxxvii., figs. 1-6.
- 1878. Anomalocera Patersonii, Brady (3), vol. i., p. 75, pl. xi., figs. 1-14, pl. x., figs. 13, 14.

A purely pelagic species, occurring occasionally in great numbers, at other times only sparingly. Taken at all points of the coast. N.D.

FAM. 9.—PARAPONTELLIDÆ

PARAPONTELLA BREVICORNIS (Lubbock).

- 1857. Pontella brevicornis, Lubbock, Ann. and Mag. Nat. Hist., 2nd ser., vol. xx., pl. xi., figs. 4-8.
- 1878. Parapontella brevicornis, Brady (3), vol. i., p. 69, pl. ix., figs. 1--16.

This, like the preceding species, is at times very abundant in the open sea, generally not very far from shore; it is found also not very unfrequently, but in smaller numbers, between tidemarks.

N.D.

FAM. 10.—ACARTIIDÆ

ACARTIA CLAUSI Giesbrecht.

- 1878. *Dias longiremis*, Brady (in part) (3), vol. i., p. 51, pl. v., figs. 1-14.
- 1892. Acartia Clausi, Giesbrecht (5), p. 507, pl. xxx., figs. 2, 4, 13-15, 17, 28, 36, 47, pl. xlii., fig. 32, pl. xliii., figs. 3, 5, 14.
- 1901. Acartia Clausi, G. O. Sars (6), vol. iv., p. 150, pl. ci.

CRUSTACEA OF NORTHUMBERLAND AND DURHAM

The species belonging to this genus require, as regards their distribution in our district, more attention than they have yet received. The prevailing form, both littoral and pelagic, is undoubtedly that here noted. But other nearly related species, formerly confused with A. longiremis (Lillieborg) will probably also be found.

N.D.

Acartia Longiremis (Lilljeborg).

1878. Dias longiremis, Brady (in part), loc. cit.

1892. Acartia longiremis, Giesbrecht (5), p. 522, pl. xxx., fig. 25, pl. xliii., fig. 25.

This is taken not unfrequently in the tow-net, though it appears to be by no means so abundant in our district as the preceding species.

N.D.

SECTION II.—HARPACTICOIDA

The re-arrangement of this group adopted in Professor Sars' work on the "Crustacea of Norway" being not yet complete, the family divisions are here altogether omitted.

MISOPHRIA PALLIDA Boeck.

1864. Misophria pallida, Boeck, Oversigt af Norges Copepoder, p. 24.

1878. Misophria pallida, Brady (3), vol. i., p. 79, pl. xiii., figs. 11-16, pl. xviii., figs. 11, 12.

Dredged off Hawthorn in 27 fathoms on a sandy bottom (G. S. B.)

PTERINOPSYLLUS INSIGNIS G. S. Brady.

1878. Lophophorus insignis, Brady (3), vol. i., p. 122, pl. xiii., figs. 1–10, and pl. xv., fig. 10, and vol. iii., p. 23 (Pterinopsyllus).

In the Ray Society Monograph (*lec. cit.*) this species was placed in the family Cyclopidæ. It is in fact intermediate in character between Cyclopidæ and Harpacticidæ, and Professor G. O. Sars has informed us (*in litt.*) that in his forthcoming work he will place the genus among Harpacticidæ. We think this right, and therefore adopt the new arrangement.

117

The type specimens were dredged in a depth of 27 fathoms off Hawthorn, Co. Durham. More recently it has been taken off Scarborough in 17 fathoms.

D.

Longipedia coronata Claus.

- 1863. Longipedia coronata, Claus (2\, p. 111, pl. xiv., figs. 14-24.
- 1903. Longipedia coronata, G. O. Sars (6), vol. v., p. 10, pls. iii. and iv.

The type species seems to be much less common in British waters than that recently described and named by Professor G. O. Sars, *L. Scotti. L. coronata*, however, was found in washings from dredged material taken off Northumberland and Durham in July, 1904, and off Hartlepool in 25 fathoms many years ago (G. S. B.)

N.D.

Longipedia Scotti G. O. Sars.

- 1880. Longipedia coronata, Brady (3), vol. ii., p. 6, pls. xxxiv. and xxxv.
- 1903. Longipedia Scotti, G. O. Sars, An Account of the Crustacea of Norway, vol. v., p. 11, pl. v., fig. 1. (not Longipedia coronata, Claus).

The true Longipedia coronata of Claus, described by that author in 1863 (Die frei-lebenden Copepoden, p. 111, pl. xiv., figs. 14-24) is said by Professor G. O. Sars to differ from that described and figured in the Ray Society Monograph of British Copepoda. The differences are found chiefly in the spinous armature of the last abdominal segments and second pair of feet.

L. Scotti is common in moderate depths of water, and on sandy bottoms especially is often very abundant. N.D.

ECTINOSOMA SARSII Boeck.

- 1872. Ectinosoma Sarsii, Boeck, Nye Slægter og Arter af Saltvands-Copepoder, p. 45.
- 1880. Ectinosoma spinipes, Brady (3), vol. ii., p. 9, pl. xxxvi., figs. 1-10.

Common in tidal pools and in moderate depths of water all round the coast.

N.D.

ECTINOSOMA HERDMANI T. and A. Scott.

1896. Ectinosoma Herdmani, T. and A. Scott, A Revision of the British Copepoda belonging to the genera Bradya, Boeck, and Ectinosoma, Boeck. Trans. Linn. Soc., ser. 2, Zoology, vol. vi., p, 432, pl. xxxvii., figs. 16, 44, pl. xxxvii., figs. 3, 16, 29, 54, pl. xxxviii., figs. 7, 25, 33, 47.

Dredged off North Sunderland, September, 1902.

N.

ECTINOSOMA NORMANI T. and A. Scott.

1896. Ectinosoma Normani, T. and A. Scott, A Revision of the British Copepoda belonging to the genera Bradya, Boeck, and Ectinosoma, Boeck. Trans. Linn. Soc., London, ser. 2, Zoology, vol. vi., p. 435, pl. xxxvi., figs. 21, 29, 39, pl. xxxvii., figs. 12, 26, 34, 51, pl. xxxviii., figs. 5, 18, 42, 45.

Found at the roots of Laminaria, Holy Island (G. S. B.) N.

ECTINOSOMA MELANICEPS BOECK.

1864. *Ectinosoma melaniceps*, Boeck, Oversigt af Norges Copepoder, p. 30.

1880. *Ectinosoma melaniceps*, Brady (3), vol. ii., p. 11, pl. xl., figs. 17-20.

A small species easily distinguished by a circumscribed patch of dusky grey colour on the front of the head. Generally distributed, but our only local records are "pools at extreme low-water mark, Roker," Cullercoats, and Alnmouth (G. S. B.) N.D.

ECTINOSOMA ERYTHROPS G. S. Brady.

1880. *Ectinosoma erythrops*, Brady (3), vol. ii., p. 12, pl. xxxvi., figs. 11-17.

"Dredged in depths of from five to thirty fathoms off the coasts of South Durham and North Yorkshire." This seems to be a rare species, but is recorded by Mr. T. Scott from the Firth of Forth, and by the late Mr. I. C. Thompson from the Irish Sea.

ECTINOSOMA BRUNNEA G. S. Brady.

1907. Ectinosoma brunnea, Brady, Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle-upon-Tyne, new series, vol. i., p. 333, pl. ix., figs. 4–11.

Taken in a salt-water pond at Amble, December, 1905. N. Microsetella Rosea (Dana).

1892. *Microsetella rosea*, Giesbrecht (5), pp. 550, 554, pl. xliv., figs. 32, 35, 37, 38, 41, 43, 46, 48, 49.

1905. Microsetella rosea, Brady, Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle, new series, vol. i., p. 213, pl. iii., figs. 1–4.

One specimen only was found in washings from the dredge taken between St. Mary's Island and Souter Point.

Bradya Typica Boeck.

1872. Bradya typica, Boeck, Nye Slægter og Arter af Saltvands-Copepoder, p. 47.

1880. *Bradya typica*, G. S. Brady (3), vol. ii., p. 17, pl. xxxviii., figs. 1–10.

1904. Bradya typica, G. O. Sars (6), vol. v., p. 46, pl. xxv.

This species is found generally on sandy bottoms similar to those haunted by *Longipedia*. Our only local record is "off Hartlepool in 25 fathoms" (G. S. B.)

D.

PSEUDOBRADYA MINOR (T. and A. Scott).

1896. Bradya minor, T. and A. Scott, A Revision of the British Copepoda belonging to the genus Bradya Boeck and Ectinosoma Boeck, p. 425, pl. xxxv., figs. 5, 9, 13, 21, 24, 31, 35, 42, pl. xxxvi., figs. 5, 9.

1904. Pseudobradya minor, G. O. Sars (6), vol. v., p. 41, pl. xxii., fig. 2.

1907. Bradya minor, Brady, Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle-upon-Tyne, new series, vol. i., p. 332, pl. ix., figs. 1–3.

Taken in a salt-water pond at Amble, December, 1905. This species may be at once recognised by a conspicuous dark patch near the base of the antennules.

N.

Zosime Typica Boeck.

- 1872. Zosime typica, Boeck, Nye Slægter og Arter af Saltsvands-Copepoder, p. 46.
- 1880. Zosime typica, Brady (3), vol. ii., p. 15, pl. xxxix., figs. 1-12.
- 1903. Zosime typica, G. O. Sars (6), vol. v., p. 27, pl. xv.

Dredged twenty miles off Sunderland on a bottom of muddy sand in forty-five fathoms (G. S. B.)

D.

Cylindropsyllus lævis G. S. Brady.

- 1880. Cylindropsyllus lævis, Brady (3), vol. iii., p. 30, pl. lxxxiv., figs. 1-8.
- 1892. Cylindropsyllus lævis, T. Scott, Tenth Annual Report of the Fishery Board for Scotland, p. 258, pl. xiii., figs. 1-18.

This species was originally described and figured from a single female specimen taken off Hartlepool in a depth of five fathoms. We have seen no further specimens, but it has been taken in considerable numbers by Mr. T. Scott in the Firth of Forth, and has been fully described and figured by him (loc. cit.). The late Mr. I. C. Thompson, of Liverpool, also found it sparingly on the west coast of England.

D.

Harpacticus Chelifer (O. F. Müller).

- 1776. Cyclops chelifer, O. F. Müller, Zool. Dan. Prodr. 2413.
- 1850. Arpacticus chelifer, Baird, p. 212, pl. xxix., figs. 2, 3, 3a-g.
- 1880. *Harpacticus chelifer*, Brady (3), vol. ii., p. 146, pl. lxiv., figs. 19, 20, pl. lxv., figs. 1-7, 9, 11, 12, 14, 15.
- 1904. Harpacticus chelifer, G. O. Sars (6), vol. v., p. 49, pls. xxviii, xxviii.

One of the commonest of the Harpacticidae: frequent between tidemarks—less frequent in greater depths. N.D.

HARPACTICUS FLEXUS Brady and Robertson.

1880. *Harpacticus flexus*, Brady (3), vol. ii., p. 152, pl. lxiv., figs. 12–18.

1904. Harpacticus flexus, Sars (6), vol. v., p. 53, pl. xxx., fig. 2.

On roots of Laminariæ, Holy Island (G. S. B.)

TIGRIOPUS FULVUS (S. Fischer).

- 1860. Harpacticus fulrus, S. Fischer, Beiträge zur Kenntniss der Entom. (Abhandl. der König. Bayer. Akad., vol. viii.), p. 656, pl. i., figs. 30-33, pl. ii., figs. 34-39.
- 1869. Tigriopus Lilljeborgii, Norman, Last Shetland Dredging Report, p. 296.
- 1880. *Harpacticus fulvus*, Brady (3), vol. ii., p. 149, pl. lxiv., figs. 1-11.

Found all round the coast, mostly in shallow pools at or above high-water mark, and often in vast swarms when the water has become warm with prolonged exposure to the sun.

N.D.

Zaus spinatus Goodsir.

- 1845. Zaus spinatus, Goodsir, Ann. and Mag. Nat. Hist., vol. xvi., p. 326, pl. xi., figs. 1-8.
- 1880. Zaus spinatus, Brady (3), vol. ii., p. 153, pl. lxvi., figs. 1-9.
- Not uncommon among weeds, especially near low-water mark all along the coast.

 No. Sars (6), vol. v., p. 57, pl. xxxiii.

 Not uncommon among weeds, especially near low-water mark all along the coast.

ZAUS GOODSIRI G. S. Brady.

- 1880. Zaus Goodsiri, G. S. Brady (3), vol. ii., p. 156, pl. lxvi., figs. 10–13.
- 1904. Zaus Goodsiri, G. O. Sars (6), vol. v., p. 59, pl. xxxv. Within our district we have seldom seen this species: it was dredged off Whitley in a depth of twenty fathoms, July, 1899, and one or two specimens were taken in the same year between tide-marks at Alnmouth (G. S. B.)

ALTEUTHA DEPRESSA Baird.

- 1850. Alteutha depressa, Baird (1), p. 216, pl. xxx., figs. 1, 2.
- 1868. Alteutha typica, Czerniawsky, Materialia ad Zoographiam ponticam comparatum, p. 34, pl. iii., figs. 15–25, pl. iv., fig. 10.

- 1880. Peltidium erenulatum, Brady (3), vol. ii., p. 163, pl. lxxii., figs. 6-15.
- 1889. Alteutha depressa, Claus, Copepodenstudien I. Peltidien, p. 11, pl. ii., figs. 9-17.

Dr. Baird (*loc. cit.*) records this species from "Berwick Bay, 1835, not common." Otherwise it does not appear to have been noticed in our district, and partly on this account we have heretofore taken Baird's species to be that here called *Eupelte purpurocincta*. But his description, and especially his figures, seem more properly applicable to the present species, and that view has also been taken by so good an authority as Professor Claus.

N.

ALTEUTHA INTERRUPTA (Goodsir).

- 1845. Sterope interrupta Q and Carillus oblongus &, Goodsir, Several new species of Crustacea allied to Saphirina. Ann. and Mag. Nat. Hist., vol. xvi., p. 326, pl. xi., figs. 10, 12.
- 1863. Alteutha bopyroides, Claus (2), p. 143, pl. xx., figs. 10-17.
- 1864. Alteutha norvegica, Boeck, Oversigt over de ved Norgès Kyster iagttage Copepoder, p. 48.
- 1880. Peltidium interruptum, G. S. Brady (3), vol. ii., p. 162, pl. lxxi., figs. 4-15.
- 1885. Peltidium conophorum, Poppe, Frei-lebende Copepoden des Jadebusens, pl. vii., fig. 19.
- 1889. Alteutha bopyroides, Claus, Copepodenstudien I. Peltidien, p. 9, pl. i., figs. 1-11, pl. ii., figs. 1-8.

A common species taken mostly in the tow-net, also by the dredge, and less commonly between tide-marks. N.D.

EUPELTE PURPUROCINCTA (Norman).

- 1869. Alteutha purpurocincta, Norman, "Last Report on Dredging off Shetland Isles." Brit. Assoc. Report, 1868, p. 298.
- 1880. Peltidium depressum, Brady (3), vol. ii., p. 160, pl. lxxii., figs. 1-5.
- 1889. Eupelte purpurocincta, Claus, Copepodenstudien I. Peltidien, p. 14, pl. iii., figs. 1-8.

This beautiful species is easily recognised by its flattened oval form and its transverse purple band; it is common in low-water pools, chiefly on the fronds of *Laminaria saccharina*. N.D.

ROBERTSONIA TENUIS (Brady and Robertson).

- 1876. Ectinosoma tenue, B. and R., Report Brit. Assoc., 1875, p. 196.
- 1880. Robertsonia tenuis, Brady (3), vol. ii., p. 25, pl. xli., figs. 1-14.

Dredged in several places off the Durham coast in depths of from twenty to thirty-seven fathoms (G. S. B.)

D.

TEGASTES* FALCATUS Norman.

- 1869. Amymone falcata, Norman, "Last Report on Dredging off Shetland Isles." Brit. Assoc. Report, 1868, p. 296.
- 1872. Amymone rubra, Boeck, Nye Slægter og Arter af Saltvands-Copepoder, p. 49.
- 1880. Amymone sphierica, Brady (not Claus) (3), vol. ii., p. 28, pl. xlix., figs. I-II.
- 1903. Amymone rubra, Brady, Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle-on-Tyne, new series, vol. i., p. 3, pl. i., fig. 13.
- 1904. Tegastes falcatus, Sars (6), p. 69, pl. xli.

A scarce but widely distributed species. Dredged in twenty-five fathoms off Marsden and Souter Point; found also at roots of Laminariæ at Holy Island (G. S. B.)

N.D.

TEGASTES LONGIMANA (Claus).

- 1863. Amymone longimana, Claus (2), p. 115, pl. xx., figs. 13, 14.
- 1880. Amymone longimana, Brady (3), vol. ii., p. 30, pl. xlix., figs. 12, 13.

One specimen dredged in a depth of thirty-seven fathoms off Hawthorn (G. S. B.)

^{*} The generic name Amymone having been twice previously used, by O. F. Müller in 1785 and by Savigny in 1817, Dr. Norman has proposed to substitute the term Tegastes.

Porcellidium fimbriatum Claus.

- 1863. Porcellidium fimbriatum, Claus (2), p. 140. pl. xxii., fig. 1.
- 1880. Porcellidium fimbriatum, Brady (3), vol. ii., p. 167, pl. lxx., figs. 1-4.
- 1904. Porcellidium fimbriatum, G. O. Sars (6), vol. v., p. 76, pls. xliv., xlv.

Found chiefly on the fronds of Laminariae between tidemarks, but "sometimes taken by the dredge in considerable numbers where decomposing algae and other vegetable matters are deposited." In our district the only record is Alumouth (G. S. B.)

Aspidiscus littoralis G. O. Sars.

1904. Aspidiscus littoralis, G. O. Sars (6), vol. v., p. 79, pls. xlvi. and xlvii.

A beautiful species, easily recognized when well grown by a brilliant crimson patch occupying the centre of the body. Its favourite habitat, as in the case of many of the flattened or depressed Copepoda, is on the fronds of Laminariae. Here it often occurs very abundantly at almost all points of our coast. In the "Monograph of British Copepoda" it was erroneously identified with Aspidiscus fasciatus Norman and Porcellidium fasciatum Boeck. Professor Sars, however, has shown that it differs from both these species, and has proposed for it the specific name littoralis.

PSAMATHE LONGICAUDA Philippi.

- 1840. Psamathe lengicanda, Philippi, Weigman. Archiv for Naturgesch., p. 189, pl. iv., fig. 1.
- 1880. Scutellidium tisboides, Brady (3), vol. ii., p. 175, pl. lxviii., figs. 1-10.
- 1905. Psamathe longicauda, G. O. Sars (6), vol. 5, p. 83, pl. xlix.

This has many characters in common with *Tisbe furcata*, and is met with in similar situations, but always sparingly. We have seen no local specimens excepting one or two taken at Roker on the fronds of *Laminaria saccharina* (G. S. B.) D.

TISBE FURCATA (Baird).

1850. Canthocamptus furcatus, Baird (1), p. 210, pl. xxv., figs. 1, 2, pl. xxx., figs. 4-6.

1880. *Idya furcata*, Brady (3), vol. ii., p. 172, pl. lxvii., figs. 1–11.

1906. Tisbe furcata, Norman and Scott (7). p. 183.

A very common species in tidal pools: much less frequent in the open sea. Very widely distributed, and correspondingly variable in minor characteristics.

N.D.

THALESTRIS LONGIMANA Claus.

1863. Thalestris longimana, Claus (2), p. 130, pl. xviii., figs. 1-11.

1880. *Thalestris longimana*, Brady (3), vol. ii., p. 136, pl. lx., figs. 1-13.

A very conspicuous species owing to its generally beautiful coloration, but never occurring in any great abundance. Not uncommon between tidemarks all along the coast. N.D.

THALESTRIS BRUNNEA G. O. Sars.

1905. Thalestris brunnea, G. O. Sars (6), vol. v., p. 108, pl. lxiii.

Specimens taken at Roker on the roots of Laminariæ, and doubtfully referred by Dr. Brady to *T. rufo-violascens* Claus, are considered by Professor Sars to belong to a species newly described by him under the specific name *brunnea*. D.

PARATHALESTRIS CLAUSI (Norman).

1905. Parathalestris Clausi, G. O. Sars (6), vol. v., p. 111, pls. lxv., lxvi.

Syn.: Thalestris Clausi, Brady and Norman.

This is one of the commonest of British Harpacticidæ, being often found plentifully in pools of the littoral zone, as well as in the open sea.

N.D.

PARATHALESTRIS HIBERNICA (Brady and Robertson).

1873. Thalestris hibernica, B. and R., Ann. and Mag. Nat. Hist., ser. 4, vol. xii., p. 135, pl. viii., figs. 17-19.

1880. Thalestris hibernica, Brady (3), vol. ii., p. 134, pl. lxii., figs. 13-17, pl. lxiii., figs. 14, 15.

1905. Parathalestris hibernica, G. O. Sars (6), vol. v., p. 113, pl. lxviii.

A scarce species. Our only local record is Holy Island, where it was found at the roots of Laminariae.

PARATHALESTRIS (?) NORTHUMBRICA now. nom.

Northumberland, Durham, and Newcastle, new series, vol. i., p. 218, pl. v., figs. 11-17 (not *Th. robusta* Claus). One specimen found in a tidal pool at Cullercoats (G. S. B.)

PARATHALESTRIS (?) DENTI (G. S. Brady).

1905. Thalestris Denti, Brady, loc. cit., p. 218, pl. vi., figs. 10-15.

Found in washings of dredged material taken between St. Mary's Island and Souter Point, July, 1904 (G. S. B.) N.D.

Of this and the preceding species the male only has been seen, and the generic reference must be considered as provisional merely.

PARATHALESTRIS HARPACTOIDES (Claus).

1880. Thalestris harpactoides, Brady (3), vol. ii., p. 127, pl. l., figs. 9-16, pl. lix., fig. 1.

1905. Parathalestris harpactoides, G. O. Sars (6), vol. v., p. 112, pl. lxvii.

This species occurred in a surface-net gathering from Teesmouth given to us by the late Mr. E. C. Davison of Sunderland (G. S. B.); rock pools, Seaton Sluice, Northumberland (A. M. N.)

PHYLLOTHALESTRIS MYSIS (Claus).

1880. *Thalestris mysis*, Brady (3), vol. ii., p. 121, pl. lviii., figs. 1-13.

1905. Phyllothalestris mysis, G. O. Sars (6), vol. v., p. 116, pls. lxx., lxxi.

In tidal pools among algæ, Alnmouth (G. S. B.)

Easily recognized by the abnormally large and ioliaceous fifth pair of feet in the female. N.

RHYNCHOTHALESTRIS RUFOCINCTA (Norman).

1880. Thalestris rufocincta, Brady (3), vol. ii., p. 125, pl. lvii., figs. 1-9.

1905. Rhynchothalestris rufocineta, G. O. Sars (6), vol. v., p. 120, pls. lxxiii., lxxiv.

Dredged off Marsden, 10 fathoms, and off Hawthorn, 27 fathoms, and at low-water on fronds of Laminaria at Roker (G. S. B.)

D.

RHYNCHOTHALESTRIS HELGOLANDICA (Claus).

1880. Thalestris helgolandica, Brady (3), vol. ii., p. 123, pl. lxi., figs. 9–14.

1905. Rhynchothalestris helgolandica, G. O. Sars (6), vol. v., p. 121, pl. lxxv.

Dredged off the Durham coast in 27 fathoms (G. S. B.) D. MICROTHALESTRIS FORFICULA (Claus).

1863. Thalestris forficula, Claus (2), p. 131, pl. xvii., figs. 7-11.

1894. Thalestris forficuloides, T. and A. Scott, Twelfth Annual Report of the Fishery Board for Scotland, p. 255, pl. x., figs. 13–25, and On Some New and Rare Crustacea from Scotland (Annals and Magazine of Natural History, ser. vi., vol. xii., 1894).

1905. Microthalestris forficula, G. O. Sars (6), vol. v., p. 123, pl. lxxvi.

Found at the roots of Laminariæ, Holy Island (G.S.B.) N.

The foregoing genera *Parathalestris*, *Phyllothalestris*, *Rhynchothalestris*, and *Microthalestris*, previously referred by most authors to *Thalestris* Claus, are considered by Dr. G. O. Sars to belong to distinct genera to which he has assigned the names here used.

Dactylopusia tisboides (Claus).

1880. Dactylopus tisboides, Brady (3), vol. ii., p. 106, pl. liv., figs. 1-13.

1905. Dactylopusia thisboides, G. O. Sars (6), vol. v., p. 126, pls. lxxvii. and lxxviii., fig. 1.

One of the commonest of the Harpacticide, occurring abundantly between tidemarks, and less profusely in greater depths of water down to at least 40 fathoms.

N.D.

Dactylopusia neglecta G. O. Sars.

1880. Dactylopus tishoides, Brady (3) (brackish water variety), vol. ii., p. 108, pl. liv., figs. 14-16.

1905. Dactylopusia neglecta, G. O. Sars (6), vol. v., p. 127, pl. lxxviii., fig. 2.

This was briefly noticed and figured in the "Monograph of British Copepoda" as a brackish water variety of *D. tishoides*, but the characters are distinctive enough to have warranted Professor G. O. Sars in giving it specific rank. The only local record is "brackish pools at Seaton Sluice, Northumberland" (G. S. B.)

DACTYLOPUSIA BREVICORNIS (Claus).

1880. Dactylopus brevicornis, Brady (3), vol. ii., p. 118, pl. lvii., figs. 10-12, pl. lviii., figs. 14.

1905. Dactylopusia brevicornis, G. O. Sars (6), vol. v., p. 130, pl. lxxx.

Not uncommon on the fronds of *Laminaria saccharina* at Sunderland (G. S. B.)

Dactylopusia platycheles (G. S. Brady).

1902. Dactylopus platycheles, Brady, On Copepoda and other Crustacea taken in Ireland and on the North-East Coast of England. Nat. Hist. Trans. Northumberland and Durham, vol. xiv., p. 61, pl. iii., figs. 1–10.

Taken among algæ at extreme low-water mark, Roker (G. S. B.)

Dactylopusia Longhostris (Claus).

1863. Dactylopus longirostris, Claus (2), p. 127, pl. xvii., figs. 4-6.

1899. Dactylopus longirostris, Brady, On Ilyopsyllus coriaceus and other Crustacea taken at Alnmouth. Nat. Hist. Trans. Northumberland and Durham, vol. xiii., p. 434, pl. xiii., figs. 9-12.

One specimen which we take to belong to this species was got in a pool near low-water mark at Almmouth (G. S. B.) N.

Dactylopusia vulgaris G. O. Sars.

- 1880. *Dactylopus Stromii*, Brady (3), vol. ii., p. 111, pl. lv., figs. 1-13.
- 1905. Dactylopusia vulgaris, G. O. Sars (6), vol. v., p. 128, pl. lxxiv., fig. 1.
- "Roker, on Laminaria saccharina, rare" (G. S. B.) D.

AMENOPHIA PELTATA BOECK.

- 1864. Amenophia peltata, Boeck, Oversigt Norges Copepoder, p. 45 (separate copy).
- 1880. Thalestris peltata, Brady (3), vol. ii., p. 138, pl. liii. figs. 11-15.
- 1906. Amenophia peltata, G. O. Sars (6), vol. v., p. 136, pls. lxxxiii. and lxxxiv., fig. 1.

One specimen found in a tidal pool at low-water mark, Alnmouth (G. S. B.)

Dactylopodella flava (Claus).

- 1866. Dactylopus flavus, Claus, Die Copepoden-Fauna von Nizza, p. 28, pl. iii., figs. 13–16.
- 1880. Dactylopus flavus (partim), Brady (3), vol. ii., p. 116, pl. lvi., figs. 1-11.
- 1905. Dactylopodella flava, G. O. Sars (6), vol. v., p. 132, pl. lxxxi.

The specimens referred in the "Monograph of British Copepoda" to Dactylopus flavus Claus belonged to two distinct species—D. flavus Claus and Idomene forficata Philippi. No specimens from Northumberland or Durham having been preserved, it is impossible now to say with certainty which of the two species ought to be recorded in this list, but inasmuch as those taken off Red Cliff, Yorkshire, belong undoubtedly to D. flavus, it seems fair to assume that the Durham specimens dredged off Hawthorn are also referable to that species.

D.

Westwoodia nobilis (Baird).

1845. Arpacticus nobilis, Baird, Trans. Berw. Nat. Club, vol. ii., p. 155.

1888. Westwoodia nobilis, Brady (3), vol. ii., p. 141, pl. lxiii., figs. 1-13.

Recorded by Dr. Baird from Berwick Bay. Very rarely on fronds of Laminaria at Sunderland (G. S. B.) A widely distributed species, but never occurring in great numbers. N.D.

DIOSACCUS TENUICORNIS (Claus).

1863. Dactylopus tenuicornis, Claus (2), p. 127, pl. xvi., figs. 17-23.

1880. *Diosaccus tenuicornis*, Brady (3), vol. ii., p. 68, pl. lix., figs. 12–16, pl. lx., figs. 14–18.

Widely distributed; living chiefly on the fronds of Laminaria.

The only local record is Cullercoats (G. S. B.)

N.

AMPHIASCUS IMUS (G. S. Brady).

1872. Stenhelia ima, Brady, Nat. Hist. Trans. Northumberland and Durham, vol. iv., p. 436, pl. xix., figs. 1-5.

1880. Stenhelia ima, Brady (3), vol. ii., p. 35, pl. xliii., figs. 1–14.

1906. Amphiascus imus, G. O. Sars (6), vol. v., p. 156, pl. xcvii.

Dredged off the Durham coast near Marsden and off Hartlepool (G. S. B.)

AMPHIASCUS TENUIREMIS (G. S. Brady).

1880. *Dactylopus tenuiremis*, Brady (3), vol. ii., p. 115, pl. lvi., figs. 12–18.

1906. Amphiascus tenuiremis, G.O. Sars (6), vol. v., p. 161, pl. cii.

Dredged in 45 fathoms 20 miles off Sunderland, and in 30 to 39 fathoms off Souter Point (G. S. B.)

D.

Amphiascus Hispidus (Brady).

1880. Stenhelia hispida, Brady (3), vol. ii., p. 32, pl. xlii., figs. 1-14.

1906. Amphiascus hispidus, G. O. Sars (6), vol. v., p. 166, pls. cvii., cviii.

Dredged off Hartlepool in five fathoms, and off Marsden, 30 fathoms (G. S. B.)

Amphiascus intermedius (Scott).

1897. Stenhelia intermedia, Scott, Marine Invertebrata of Loch Fyne. 15th Annual Report Fishery Board for Scotland, p. 169, pl. ii., figs. 10-21.

1906. Amphiascus intermedius, G. O. Sars (6), vol. v., p. 169, pl. cx.

A single specimen found among dredged material from a depth of 25 fathoms off Hartlepool (G. S. B.)

DELAVALIA PALUSTRIS G. S. Brady.

1868. Delavalia palustris, Brady, Nat. Hist. Trans. North-umberland and Durham, vol. iii., p. 134, pl. v., figs. 10–15, and (3) vol. ii., p. 43, pl. l., figs. 1–8.

1906. Stenhelia palustris, G. O. Sars (6), vol. v., p, 185, pl. cxxii.

Found in brackish pools near the mouth of the Seaton Burn, Northumberland, and in similar pools on the Aln above Alnmouth (G. S. B.)

Professor G. O. Sars considers (loc. cit.) that the genus Delavalia is really identical with Stenhelia Boeck, but Boeck's definition of Stenhelia assigns to the first pair of feet a structure "similar to those of Dactylopus," and of this latter genus he says of the first pair of feet that "the inner branch is elongated, three-jointed, the first joint being very long and bearing two prehensile bristles: the inner branch generally smaller, with its middle joint not much longer than the other two"—both branches being therefore three-jointed. But one of the most distinctive characters of Delavalia is the two-jointed and non-prehensile inner branch of the first foot. We therefore prefer to retain that generic name.

Delavalia longicaudata (Boeck).

1872. Stenhelia longicaudata, Boeck, Nye Slægter og Arter af Saltvands-Copepoder. Chr. Vid. Forh., p. 49.

1880. Delavalia reflexa, Brady (partim) (3), vol. ii., p. 45, pl. li., figs. 9, 14.

1906. Stenhelia longicaudata, G. O. Sars (6), vol. v., p. 190, pl. cxxv., fig. 1.

This species is included in our list on the faith of Professor G. O. Sars, who remarks that "some of the figures given by

Professor Brady of his species *Delavatia reflexa* (for instance figures 9 and 14) undoubtedly refer to the present form."

D. reflexa was dredged on a sandy bottom five miles off Hartlepool (G. S. B.)

DELAVALIA REFLEXA Brady and Robertson.

1875. Delavalia reflexa, B. and R., Brit. Assoc. Report, p. 196.

1880. *Delavalia reflexa*, Brady (3), vol. ii., p. 45, pl. li., figs. 1–8, 11–13.

1906. Stenhelia reflexa, G. O. Sars (6), vol. v., p. 186, pl. cxxiii.

Respecting this species G. O. Sars says, "It seems to me beyond doubt that Mr. Brady, under the name of *Delavalia reflexa*, has confounded two distinct species," and that some of his figures refer to *Stenhelia longicandala*, the remainder only to *S. reflexa*.

Found off Hartlepool as noted under *D. longicaudata*. D.

DELAVALIA ROBUSTA Brady and Robertson.

1875. Delavalia robusta, B. and R., Brit. Assoc. Report, p. 196.

1880. *Delavalia robusta*, Brady (3), vol. ii., p. 46, pl. li., figs. 15-21.

Dredged off Hawthorn (G. S. B.)

D.

DELAVALIA PYGMÆA Brady.

1905. Delavalia fygmwa, Brady, On Copepoda and other Crustacea taken off Northumberland and Durham in July, 1904 (Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle, new series, vol. i.), p. 214, pl. iii., figs. 5–16.

One specimen taken between St. Mary's Island and Souter Point in washings from dredge (G. S. B.)

N.

STENHELIA LIMICOLA G. S. Brady.

1899. Stenhelia limicola, Brady, On Ilyopsyllus coriaceus and other Crustacea taken at Alnmouth (Nat. Hist Trans. Northumberland and Durham, vol. xiii., 1899) p. 433, pl. xii., figs. 1-7.

133

Two or three examples of this species were taken near the old oyster-hatchery at the side of the Aln above Alnmouth; we had previously found it in a somewhat similar situation on the muddy shores of the river Glen at Carrick, County Donegal (G. S. B.)

STENHELIA MEEKI G. S. Brady.

1905. Stenhelia Meeki, Brady, On Copepoda and other Crustacea taken off Northumberland and Durham in July, 1904. Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle, new series, vol. i., p. 216, pl. iv., figs. 7–16.

One specimen found in washings from dredge between St. Mary's Island and Souter Point (G. S. B.)

STENHELIA HERDMANI A. Scott.

1896. Stenhelia Herdmani, A. Scott, Some New and Rare Copepoda from Liverpool Bay. Report for 1895 on the Lancashire Sea Fisheries Laboratory, pl. i., figs. 1–11.

1903. Brady, on Entomostraca found at the roots of *Laminariæ*. Nat. Hist. Trans. Northumberland and Durham, new series, vol. i., p. 3, pl. i., figs. 1–11.

Found in washings from the roots of Laminaria at Holy Island (G. S. B.)

STENHELIA DENTICULATA I. C. Thompson.

1893. Stenhelia denticulata, Thompson, Revised Report on the Copepoda of Liverpool Bay. Trans. Liverpool Biological Society, p. 20, pl. xxx., figs. 1–11.

1903. Stenhelia denticulata, Brady, On Entomostraca found at the roots of Laminaria. Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle, vol. i., new series, p. 3.

Dredged off Whitley in a depth of twenty fathoms (G. S. B.)

STENHELIA ÆMULA (T. Scott).

1893. Delavalia æmula, T. Scott, Additions to the Fauna of the Firth of Forth. Eleventh Annual Report Fishery Board for Scotland, p. 204, pl. iv., figs. 36-47.

1906. Stenhelia æmula, G.O. Sars (6), vol. v., p. 184, pl. cxxi.

Taken in a depth of 25 fathoms five miles off Hartlepool (G. S. B.)

CANTHOCAMPTUS MINUTUS (O. F. Müller).

- 1776. Cyclops minutus, O. F. Müller, Zool. Dan. Prodr., 2400.
- 1785. Cyclops minutus, idem, Entomostraca, p. 101, pl. xvii., figs. 1-7.
- 1820. Monoculus staphylinus, Jurine, Hist. des Monocles, p. 74, pl. vii., figs. 1-19.
- 1880. Canthocamptus minutus, Brady (3), vol. ii., p. 48, pl. xliv., figs. 1-17.

A very widely distributed and common species, occurring abundantly in most sheets of fresh water whether great or small.

N.D.

CANTHOCAMPTUS HORRIDUS Fischer.

- 1860. Canthocamptus horridus, Fischer, Beiträge zur Kenntniss der Entomostraceen. Abhandl. der König. Bayer. Akad. der Wissensch., vol. viii., p. 670, pl. xxi., figs. 57–59a, 60.
- 1880. Canthocamptus northumbricus, Brady (3), vol. ii., p. 57, pl. xlv., figs. 1-14.

This has been identified by Professor Lilljeborg, we think rightly, with the more recently described *C. northumbricus*: the earlier name must, of course, be adopted. It was found sparingly in Bolam Lake, Northumberland, and more lately (July, 1896) in Loughrigg Tarn (G. S. B.) Noticed also by Mr. T. Scott near Edinburgh, and by Mr. Scourfield in the South of England.

ATTHEYELLA CRASSA (G. O. Sars).

- 1863. Canthocamptus crassus, G. O. Sars, Oversigt af de indenlandske Ferskvandscopepoder, p. 23 (separate copy).
- 1880. Attheyella spinesa, Brady (3), vol. ii., p. 58, pl. xliii., figs. 15-18, pl. xlvi., figs. 13-18.

1907. Attheyella crassa, G. O. Sars (6), vol. v., p. 199, pl. cxxix.

A small species, probably not uncommon, but easily overlooked. The only localities in our district of which we have notes are an engine-pond at Murton Junction, near Sunderland, and a "ferruginous ditch at the roadside half-way between Haydon Bridge and Staward" (G. S. B.)

ATTHEYELLA PYGMÆA (G. O. Sars).

1863. Canthocamptus pygmæus, G. O. Sars, loc. cit., p. 21.

1880. Attheyella cryptorum, Brady (3), vol. ii., p. 60, pl. lii., figs. 1–18.

1907. Attheyella pygmæa, G. O. Sars (6), vol. v., p. 202, pl. cxxxi.

A commoner species apparently than the preceding, and widely distributed, preferring pools and ditches rather than large expanses of water. Our only local record is, however, from a very different situation—"the damp roof of the pit workings of the low main, West Cramlington Colliery, living among films of gelatinous algæ." These specimens were sent to us by the late Mr. Atthey, and the genus was named after him, but the species—thought at the time to be new—had been previously described by G. O. Sars as a Canthocamptus. We still think, however, that the characters are such as to warrant a generic distinction.

MESOCHRA LILLJEBORGI Boeck.

1864. Mesochra Lilljeborgi, Boeck, Oversigt af Norges Copepoder, p. 51.

1880. Mesochra Lilljeborgi, Brady (3), vol. ii., p. 62, pl. xli., figs. 15-21, pl. xlvii., figs. 16-21.

In the north-eastern district this species seems to be confined to brackish water localities, having been found only in salt-marsh pools at Seaton Sluice and Alnmouth (G. S. B.) N.

TACHIDIUS DISCIPES Giesbrecht.

1869. Tachidius brevicornis, Brady, Nat. Hist. Trans. Northumberland and Durham, vol. iii., p. 130, pl. v., figs. 1-9.

136

- 1880. Tachidius brevicornis, Brady (3), vol. ii., p. 20, pl. xxxvii.
- 1881. Tachidius discipes, Giesbrecht, Die freilebenden Copepoden der Kieler Foehrde, p. 108.

The reference of this species to *Cyclops brevicornis* Muller—until recently adopted by most authors—was, to say the least, a very doubtful one. It seems best, therefore, to use the new specific name proposed by Giesbrecht.

T. discipes is to be found plentifully during the summer months in the brackish pools of almost all estuaries and saltmarshes.

N.D.

Tachidius Littoralis Poppe.

- 1881. Tachidius littoralis, Poppe, Ueber einen neuen Harpacticiden. Abhandl. d. naturw. Ver. Bremen, vol. vii., p. 149, pl. vi.
- 1892. Tachidius crassicornis, T. Scott, Additions to the Fauna of the Firth of Forth, Part 4. Tenth Annual Report of Fishery Board for Scotland, p. 250, pl. viii., figs. 14-27.
- 1895. Tachidius littoralis. Brady, Entomostraca collected in the Solway district and at Seaton Sluice. Nat. Hist. Trans. Northumberland and Durham, vol. xiii., p. 13, pl. ii., figs. 14–17.

Another brackish water species found in similar situations to the foregoing. River Lyne at Newbiggin, mouth of the Wansbeck, and Seaton Carew (A. M. N.): Seaton Sluice (G. S. B.)

N.D.

Ameiropsis brevicornis G. O. Sars.

1880. Ameira longipes, Brady (3), vol. ii., p. 37, pl. liii., figs. 1-10.

1907. Ameiropsis brevicornis, G. O. Sars (6), vol. v., p. 224, pl. cxlviii.

Dredged in 25 to 45 fathoms off the Durham coast (G. S. B.)
Professor G. O. Sars considers that the species called by us

Ameira longifes belongs to a nearly allied distinct genus
named by him as above, and distinguished chiefly by the
structure of the mandibular palp.

D.

AMEIRA BREVIREMIS G. S. Brady.

1905. Ameira breviremis, Brady, On Copepoda and other Crustacea taken off Northumberland and Durham in July, 1904. Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle, new series, vol. i., p. 214, pl. iii., figs. 11–14, and pl. iv., figs. 1–6.

One specimen only taken between St. Mary's Island and Souter Point in washings from dredged material (G. S. B.) N. DANIELSSENIA TYPICA BOECK.

1872. Danielssenia typica, Boeck, Nye Slægter og Arter Saltvands-Copepoder, p. 55.

1880. *Fonesiella spinulosa*, Brady (3), vol. ii., p. 41, pl. xlviii., figs. 14–18, pl. xlix., figs. 14, 15.

Taken sparingly off Hartlepool on a sandy bottom, and off Hawthorn on a muddy bottom, depth 37 fathoms (G. S. B.)
D.

THOMPSONULA HYÆNÆ (I. C. Thompson).

1889. Fonesiella hyænæ, I. C. Thompson, Proc. Liverpool Biological Society, vol. iii., p. 193, pl. ix., figs. 1-10.

1905. Thompsonula hyænæ, T. Scott, Ann. and Mag. Nat. Hist., ser. 7, vol. xvi., p. 571.

A few specimens of this interesting species were taken by the dredge off North Sunderland in 1892 (G. S. B.). It has been dredged also by Dr. Scott in the Firth of Forth. N.

PHYLLOPODOPSYLLUS BRADYI (T. Scott).

1892. Tetragoniceps Bradyi, T. Scott, Tenth Annual Report of the Fishery Board for Scotland, p. 253, pl. ix., figs. 19-32.

1905. Tetragoniceps Bradyi, Brady, On Copepoda and other Crustacea taken off Northumberland and Durham in July, 1904. Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle, new series, vol. i., p. 217, pl. v., figs. 1–10.

1907. Phyllopodopsyllus Bradyi, G. O. Sars (6), vol. v., p. 231, pl. clv.

One specimen found in washings from dredge between St. Mary's Island and Souter Point (G. S. B.)

N.

STENOCOPIA LONGICAUDATA (T. Scott).

- 1892. Ameira longicaudata, T. Scott, Additions to the Fauna of the Firth of Forth. 10th Annual Report of the Fishery Board for Scotland, Part 3, p. 250, pl. ix., figs. 1–18.
- 1907. Stenocopia longicaudata, Sars (6), vol. v., p. 228, pls. cli., clii.

Dredged off Hartlepool in 25 fathoms (G. S. B.) D.

LAOPHONTE CORNUTA Philippi.

- 1840. Laophonte cornuta, Philippi, Archiv für Naturgeschichte, p. 189, pl. iii., fig. 13.
- 1880. Laophonte serrata, Brady (3), vol. ii., p. 71, pl. lxxiii., figs. 1-14.
- 1907. Laophonte cornuta, G. O. Sars (6), vol. v., p. 235, pls. clvii. and clviii.

In the opinion of Professor G. O. Sars this species "has been erroneously identified by Brady and other British authors with *Cleta serrata* of Claus, which is a different species."

Found at the roots of Laminariæ at Holy Island. N.

LAOPHONTE CURTICAUDA Boeck.

- 1864. Laophonte curticauda, Boeck, Oversigt af Norges Copepoder, p. 54.
- 1880. Laophonte curticauda, Brady (3), vol. ii., p. 80, pl. lxxiii., figs. 15–18, pl. lxxvi., figs. 1-9.

A common littoral species, found in tidal pools at Whitburn and Sunderland, and at the roots of Laminaria, Holy Island (G. S. B.)

N.D.

LAOPHONTE SIMILIS (Claus).

- 1866. Cleta similis, Claus, Die Copepodenfauna von Nizza, p. 23, pl. v., figs. 13, 14.
- 1880. Laophonte similis, Brady (3), vol. ii., p. 78, pl. lxxv., figs. 1-14.

A common form in the littoral zone, and extending downwards to a depth of several fathoms along the coasts of Durham and Northumberland.

N.D.

LAOPHONTE LONGICAUDATA Boeck.

1864. Laophonte longicaudata, Boeck, Oversigt af Norges Copepoder, p. 55.

1880. Laophonte longicaudata, Brady (3), vol. ii., p. 82, pl. lxxiv., figs. 12-15, pl. lxxvi., figs. 10-15.

Dredged in several places off the Durham coast down to 30 fathoms—Hartlepool, Seaham, and Hawthorn (G. S. B.)

LAOPHONTOPSIS LAMELLIFERA (Claus).

1863. Cleta lamellifera, Claus (2), p. 123, pl. xv., figs. 21-25.

1880. Laophonte lamellifera, Brady (3), vol. ii., p. 83, pl. lxxv., figs. 15-23.

A rather scarce species, but occurring both on algae in the littoral zone and among dredged material from moderate depths. On Laminariae and on muddy rocks, Sunderland, and at the roots of Laminariae, Sunderland and Holy Island (G. S. B.)

ASELLOPSIS HISPIDA Brady and Robertson.

1873. Asellopsis hispida, B. and R., Ann. and Mag. Nat. Hist., ser. 4, vol. xii., p. 137, pl. ix., figs. 6–10.

1880. *Laophonte hispida*, Brady (3), vol. ii., p. 85, pl. lxxxi., figs. 1-11.

Dredged sparingly in a depth of from four to ten fathoms off the Durham coast (G. S. B.)

NORMANELLA DUBIA (Brady and Robertson).

1876. *Laophonte dubia*, B. and R., Brit. Assoc. Report (1875), p. 196.

1880. Normanella dubia, Brady (3), vol. ii., p. 87, pl. lxxviii., figs. 12-22.

A minute species, probably often overlooked, though widely distributed. Dredged off Marsden and Hartlepool, 10 to 30 fathoms (G. S. B.)

CLETODES LIMICOLA G. S. Brady.

1872. Cletodes limicola, Brady, Nat. Hist. Trans. North-umberland and Durham, vol. iv., p. 438, pl. xxi., figs. 10–17.

1880. Cletodes limicola, Brady (3), vol. ii., p. 90, pl. lxxix., figs. 1-12.

In depths of from 20 to 45 fathoms in muddy sand off the Durham coast (G. S. B.)

CLETODES LONGICAUDATA Brady and Robertson.

1876. Cletodes iongicaudata, B. and R., Brit. Assoc. Report (1875), p. 196.

1880. Cletodes longicaudata, Brady (3), vol. ii., p. 92, pl. lxxix., figs. 13-19.

Found in similar situations to the preceding species. Off Hartlepool five fathoms, and at roots of Laminaria, Holy Island (G. S. B.)

N.D.

CLETODES PROPINQUA Brady and Robertson.

1876. Cletedes prepinqua, B. and R., Brit. Assoc. Report (1875), p. 196.

1880. Cletodes propinqua, Brady (3), vol. ii., p. 94, pl. lxxvii., figs. 9-17.

Dredged off Marsden in 35 fathoms (G. S. B.) D.

CLETODES LINEARIS (Claus).

1866. Lilljebergia linearis, Claus, Die Copepodenfauna von Nizza, p. 22, pl. ii., figs. 1–8.

1880. Cletedes linearis, Brady (3), vol. ii.. p. 95, pl. lxxx., figs. 1-14.

An uncommon species. The only local record is Holy Island, where it was found at the roots of Laminaria (G. S. B.)
N.

CLETODES SIMILIS T. Scott.

1895. Cletedes similis, T. Scott, Thirteenth Annual Report of the Fishery Board for Scotland, p. 168, pl. iii., figs. 22-26, pl. iv., figs. 1-3.

At roots of Laminariae, Holy Island, and dredged off Souter Point in 39 fathoms (G. S. B.)

N.D.

CLETODES LATA T. Scott.

1892. Cietedes lata, T. Scott, Tenth Annual Report Fishery Board for Scotland, p. 257, pl. x., figs. 10-18.

Dredged off Hartlepool in 25 fathoms (G. S. B.) D.

PONTOPOLITES TYPICUS T. Scott.

- 1894. Pontopolites typicus, T. Scott, Twelfth Annual Report of the Fishery Board for Scotland, p. 251, pl. viii., figs. 9-17.
- 1903. Pontopolites typicus, Brady, On Entomostraca found at the roots of Laminariæ. Trans. Nat. Hist. Soc. Northumberland and Durham, new series, vol. i., p. 4, pl. i., figs. 4-12.

Found at the roots of Laminariæ, Holy Island (G. S. B.) N.

NANNOPUS PALUSTRIS G. S. Brady.

1880. Nannopus palustris, Brady (3), vol. ii., p. 101, pl. lxxvii., figs. 18-20.

A few specimens found in pools of brackish water at Seaton Sluice (G. S. B.)

PLATYCHELIPUS LITTORALIS G. S. Brady.

1880. Platychelipus littoralis, Brady (3), vol. ii., p. 103, pl. lxxix., figs. 20-23, pl. lxxx., figs. 15-19.

In brackish pools at Alnmouth and Seaton Sluice (G. S. B.) N.

ILYOPSYLLUS CORIACEUS Brady and Robertson.

- 1880. Ilyopsyllus coriaceus, Brady (3), vol. ii., p. 143, pl. lxxxii., figs. 1-10.
- 1899. Ilyopsyllus coriaceus, Brady, On Ilyopsyllus coriaceus and other Crustacea taken at Alnmouth. Nat. Hist. Trans. Northumberland and Durham, vol. xiii., p. 434, pls. xi. and xii., fig. 8.

This very curious and interesting species was first described from specimens taken in the West of Ireland. It has since been found at Arcachon in France, at Lymington in Hampshire, and lastly on the muddy flats at Alnmouth, Northumberland. In all these cases the habitat has been similar—on mud banks a little removed from the sea where the salinity of the water is periodically reduced by admixture from rivers.

N.

SECTION III.—CYCLOPOIDA FAM. I.—CYCLOPIDÆ

OITHONA SIMILIS Claus.

1866. Oithona similis, Claus, Die Copepoden-Fauna von Nizza, p. 14.

1878. Oithona spinifrons (Boeck?), Brady (3), vol. i., p. 90, pl. xiv., figs. 1-9, pl. xxiv.A, figs. 1, 2.

Taken frequently by the tow-net in the open sea, but seldom in any great numbers.

N.D.

Cyclopina Littoralis G. S. Brady.

1872. Cyclopina littoralis, Brady, Nat. Hist. Trans. North-umberland and Durham, vol. iv., p. 429, pl. xvii., figs. 9–14.

1878. Cyclopina littoralis, Brady (3), vol. i., p. 92, pl. xv., figs. 1-9.

This is a rather rare species, occurring chiefly among weeds between tidemarks, but also in dredgings from various depths up to 45 fathoms. We have taken it in tidal pools at Alnmouth, Whitley, and Ryhope, as well as in several dredgings off the coast (G. S. B.)

CYCLOPINA GRACILIS Claus.

1863. Cyclopina gracilis, Claus (2). p. 104. pl. x., figs. 9-15.

1878. Cyclopina gracilis, Brady (3), vol. i., p. 93. pl. xxiv.e, figs. 1-9, pl. xci., figs. 10, 11.

1906. Cyclopina gracilis, Brady, Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle-upon-Tyne, new series, vol. i., part 3, pl. x., fig. 13.

Several specimens of *C. gracilis* were found in a gathering from a salt-water pond at Amble in December, 1905. N.

CYCLOPINA (?) OVALIS G. S. Brady.

1880. Cyclopina (1) ovalis, Brady (3), vol. ii., p. 181 (wood-cut).

To the original description based upon a single imperfect specimen we are able to add nothing. It was taken in the surface net off Sunderland (G. S. B.)

EURYTE LONGICAUDA Philippi.

1843. Euryte longicauda, Philippi, Archiv für Naturg., Jahr. 9, p. 63, pl. iii., fig. 3 a-d.

1878. Thorellia brunnea, Boeck, Oversigt over de ved Norges Kyster iagttagne Copepoder, p. 26.

1878. Thorellia brunnea, Brady (3), vol. i., p. 95, pl. xvi., figs. 1-10.

By no means a common species in our district, but on other parts of the British coast considerably more abundant; generally on the fronds of *Laminaria saccharina* at or about low-water mark. We have notes of its capture on the Durham coast (exact localities not preserved) and at the roots of Laminariæ at Holy Island.

N.D.

Cyclops viridis Jurine.

1878. *Cyclops gigas*, Brady (3), vol. i., p. 105, pl. xx., figs. 1–16.

1891. Cyclops viridis, Brady (4), p. 82, pl. v., figs. 6-10.

1901. Cyclops viridis, Lilljeborg, Synopsis specierum huc usque in Suecia observatarum generis Cyclopis, Stockholm, p. 8 (separate copy), pl. i.. figs. 6–11.

Common everywhere in fresh water, sometimes even in brackish pools. N.D.

Cyclops bicuspidatus Claus.

1891. Cyclops Thomasi, Brady (4), p. 80, pl. vi., figs. 1-4.

1891. Cyclops bicuspidatus, Brady (4), p. 78, pl. v., figs. 1-5.

1901. Cyclops bicuspidatus, Lilljeborg, loc. cit., p. 11, pl. i., figs. 12-17, pl. ii., fig. 1.

In a pond in Lambton Park, county Durham (A. M. N.) D.

CYCLOPS VERNALIS S. Fischer.

1863. Cyclops elongatus, Claus (2), p. 97, pl. xi., figs. 1, 2.

1891. Cyclops elongatus, Brady (4), p. 70, pl. i., figs. 1-5.

1901. Cyclops vernalis, Lilljeborg, loc. cit., p. 17, pl. ii., figs. 5-7.

A form of unfrequent occurrence, characterised by the presence of eighteen joints in the anterior antennæ instead of the usual seventeen, was described by Professor Claus as a distinct species under the name *elongatus*. This is now

generally considered as an abnormality, a variation of *C. vernalis*. Professor Lilljeborg, in his definition of *C. vernalis*, says "Antennæ primi paris . . . articulis 17, rarissime 18 compositæ." Our only record is for the *elongatus* variety. Pools near Broomley Lough (A. M. N.)

Cyclops vicinus Uljanin.

1891. Cyclops vicinus, Brady (4), p. 77, pl. i., figs. 6-9.

1901. Cyclops vicinus, Lilljeborg, loc. cit., p. 26, pl. ii., figs. 16-19.

Our local records are Bolam Lake and Paston Tarn (G. S. B.); Broomley Lake and Fallowlees Lake (A. M. N.)

CYCLOPS STRENUUS S. Fischer.

1878. Cyclops strenuus. Brady (3), vol. i., p. 104, pl. xix., figs. 1-7.

1891. Cyclops strenuus, idem (4), p. 73, pl. ii., figs. 1-4.

1891. Cyclops abyssorum, idem, ibidem, p. 73, pl. iii.

The form described by Sars under the specific name abyssorum seems to be simply a pelagic form of *C. strenuus*, altogether more feebly developed, and generally found at considerable depths below the surface. Of *C. abyssorum* we have records from Crag and Broomley Lakes (A. M. N.); of the *strenuus* form from Belsay, Plessey, Lambton Park, and Seaton Carew.

Cyclops fuscus (Jurine).

1878. Cyclops signatus, Brady (3), vol. i., p. 100, pl. xvii., figs. 4-12, and (4) p. 71 (in part).

1901. Cyclops fuscus, Lilljeborg, lec. cit., p. 44, pl. iii., figs. 12-15.

A common species, generally distributed in weedy ponds and ditches.

N.D.

Cyclops albidus (Jurine).

1878. Cyclops tenuicornis, Brady (3), vol. i., p. 102, pl. xviii., figs. 1-10.

1891. Cyclops signatus, idem (4), p. 71 (in part).

In the same situations as the preceding species, and equally common.

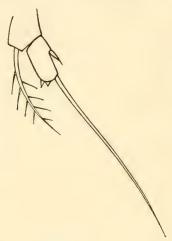

N.D.

Cyclops insignis Claus.

1868. Cyclops Lubbockii, Brady, Nat. Hist. Trans. North-umberland and Durham, vol. iii., p. 127, pl. iv., figs. 1-8.

1878. Cyclops insignis, Brady (3), vol. i., p. 108, pl. xxi., figs. 1-9, and (6) p. 73, pl. vi., fig. 5 (1891).

Taken many years ago in brackish pools near the edge of Hartlepool Slake. The figure of the fifth foot in Plate xxi. of the Ray Society Monograph is incorrect; that here given was

CYCLOPS INSIGNIS.
Fifth foot, highly magnified.

drawn from a specimen taken at Lymington, Hants, no example from Hartlepool being at present attainable: the figure agrees almost exactly with that given by Claus (G. S. B.)

Cyclops serrulatus S. Fischer.

1878. Cyclops serrulatus, Brady (3), vol. i., p. 109, pl. xxii., figs. 1-14, and (4) p. 83, pl. vii., fig. 1 (1891).

Wherever there is water capable of sustaining animal life there may be found *Cyclops serrulatus*. It seems to be less fastidious about impurities and less dependent on the presence of vegetation than any other species. It is also very widely distributed, occurring, if not from China to Peru, at all events from Turkestan, through Europe, to North America. N.D.

CYCLOPS MACRURUS G. O. Sars.

1878. Cyclops macrurus, Brady (3), vol. i., p. 111, pl. xxix., figs. 1–5, and (4) p. 84, pl. vii., fig. 2 (1891).

We have no local record of this species except from Crag Lake (A. M. N.)

Cyclops Affinis G. O. Sars.

1878. Cyclops affinis, Brady (3), vol. i., p. 112, pl. xv., figs. 11–14, pl. xxiv.b, figs. 10–15, and (4) p. 86, pl. viii., figs. 1–6 (1891).

Not a common species. Locally it has been found only in the river Till at Etal (A. M. N.)

N.

Cyclops fimbriatus S. Fischer.

1878. Cyclops crassicornis, Brady (3), vol. i., p. 118, pl. xxiii., figs. 1--6.

1891. Cyclops fimbriatus, Brady (4), p. 90, pl. ix., fig. 1.

Found in Bolam Lake, and in a ferruginous ditch by the side of the road between Haydon Bridge and Staward (G. S. B.); Rainton Meadows, county Durham (A. M. N.)
N.D.

Cyclops salinus G. S. Brady.

1899. Cyclops salinus, Brady, On Ilyopsyllus coriaceus and other Crustacea taken at Alnmouth. Nat. Hist. Trans. Northumberland and Durham, vol. xiii., p. 432, pl. xii., figs. 11–15; and On Entomostraca found at the roots of Laminariæ, idem, ibidem (new series, vol. i., p. 7, pl. i., figs. 1–3, 1904).

Found among fuci between tidemarks at Alnmouth and Holy Island (G. S. B.)

N.

[Cyclops Kaufmanni Uljanin.

In the Ray Society Monograph (vol. i., p. 113, pl. xxix., figs. 6-12) C. Kaufmanni was described and figured, as also in the "Revision" of 1891 (Brady (4), p. 89, pl. vii., fig. 3).

But no indubitably adult specimens have as yet been observed, and it seems best under these circumstances to consider it as an immature form of some other species—perhaps of *C. viridis*. The same remarks apply to *Cyclops Helleri*].

HALICYCLOPS ÆQUOREUS (S. Fischer).

1878. Cyclops æquoreus, Brady (3), vol. i., p. 119. pl. xix., figs. 8-10, pl. xxi., figs. 11-17, and (4) p. 91, pl. x., fig. 1 (1891).

Claus in 1893 founded a new genus Hemicyclops with Cyclops æquoreus as the type. The name, however, having been previously used in a different sense by Boeck, Dr. Norman has proposed to substitute for it that of Halicyclops.*

H. equoreus is essentially a brackish water species, occurring not uncommonly in salt marshes and pools at the side of estuaries. It seems to be generally distributed, but the only local habitat at present known to us is Seaton Sluice, Northumberland (G. S. B.)

FAM. 2.—ASTEROCHERIDÆ

DERMATOMYZON NIGRIPES (Brady and Robertson).

1880. Cyclopicera nigripes, Brady (3), vol. iii., p. 54, pl. lxxxix., figs. 1-11.

1899. Dermatomyzon nigripes, Giesbrecht, Die Asterocheriden des Golfes von Neapel und der angrenzenden Meeres-Abschnitte, Berlin, 1899, p. 77, pl. i., fig. 4, pl. v., figs. 1–14.

A fine and well characterized species, not uncommon in moderate depths of water. Off Marsden and Hawthorn in 25 to 27 fathoms. Off Alnmouth 50 to 59 fathoms (G. S. B.)

ASTEROCHERES LATA (G. S. Brady).

1880. Cyclopicera lata, Brady (3), vol. iii., p. 56, pl. lxxxix., fig. 12, pl. xc., figs. 11-14.

One specimen among algae in a tidal pool at Roker (G. S. B.) This species is normally parasitic on *Echinus*

On new generic names for some Entomostraca (Annals and Magazine of Natural History, ser. 7, vol. xi., April, 1903).

csculentus, and the free-swimming condition in which it is frequently found is probably only temporary. The parasitic Crustacea of our district have been scarcely at all investigated, and will form a rich field for future research. The identification of this species with Ascomyzon echinicala Norman appears to have been erroneous. There are rather conspicuous differences in the fifth pair of feet and other points, but these need examination with the aid of further specimens, not at present attainable.

ASTEROCHERES BOECKI (G. S. Brady).

1880. Artotrogus Boecki, Brady (3), p. 60, pl. xci., figs. 1-9. 1899. Asterocheres Boecki, Giesbrecht, Die Asterocheriden des Golfes von Neapel und der angrenzenden Meeres-Abschnitte, Berlin, 1899, pp. 75 and 100, pl. i., fig. 2, pl. ii., figs. 22-31.

In a tidal pool, Alnmouth, September, 1899 (G. S. B.)

Like the preceding, probably a truly commensal or parasitic species only accidentally found in a free condition.

ASTEROCHERES VIOLACEUS (Claus).

- 1889. Echinocheres violaceus, Claus, Ueber neue oder wenig bekannte halbparasitische Copepoden, p. 30, pl. vi., figs. 1–10.
- 1899. Asterocheres violaceus, Giesbrecht, lec. cit., pp. 76 and 101, pl. i., fig. 1, and pl. ii., figs. 34-42.
- 1899. Echinocheres violaceus, Brady, On Ilyopsyllus coriaceus and other Crustacea taken at Alnmouth. Nat. Hist. Trans. Northumberland and Durham, vol. xiii., p. 437, pl. xii., figs. 9, 10.
- 1899. Cyclopicera berniciensis, idem ibidem, p. 438, pl. xiii., figs. 1-8.

Two specimens taken in the free condition in a tidal pool near low-water mark at Almmouth (G. S. B.)

The name Cyclopicera berniciensis must be withdrawn, having been founded upon a mutilated male specimen of Asterocheres violaceus.

1.40 K

ACONTIOPHORUS SCUTATUS Brady and Robertson.

1880. Acontiophorus scutatus, Brady (3), vol. iii., p. 69, pl. xc., figs. 1-10.

Dredged in 27 fathoms off Hawthorn (G. S. B.) D.

Bradypontius magniceps (G. S. Brady).

1880. Artotrogus magniceps, Brady (3), vol. iii., p. 61, pl. xciii., figs. 1-9.

1899. Bradypontius magniceps, Giesbrecht, loc. cit., p. 88, pl. vi., figs. 41-44.

A few specimens dredged off Castle Eden in 20 fathoms. D.

CRIBROPONTIUS NORMANI (Brady and Robertson).

1880. Artotrogus Normani, Brady (3), vol. iii., p. 63, pl. xci., figs. 12-15; pl. xcii., fig. 14, pl. xciii., fig. 10.

1899. Cribropontius Normani, Giesbrecht, loc. cit., p. 86, pl. vii., figs. 40-47.

A few specimens dredged six miles off Hawthorn in a depth of 27 fathoms (G. S. B.)

Dyspontius striatus Thorell.

1880. Dyspontius striatus, Brady (3), vol. iii., p. 65, pl. xcii., figs. 1-13.

1899. Dyspontius striatus, Giesbrecht, loc. cit., p. 90, pl. i., fig. 10, pl. vii., figs. 1-11.

Dredged off Hawthorn in company with the foregoing species (G. S. B.)

D.

MICROCANCERILLA, nov. gen.

Body oblong, urosome distinctly separate from metasome; antennules short, six-jointed; mandibles simple, falcate; maxillæ club-shaped; anterior and posterior maxillipeds clawed, prehensile; three pairs of biramose swimming feet.

MICROCANCERILLA CERULEOCRUCIATA, n. sp. Plate IX. (A).

Female, Length o'42 mm. Cephalothorax oblong-ovate, last segment expanded laterally and produced backwards, forming two acute subfalcate processes, each of which bears near the tip a single rigid seta (?rudimentary fourth foot);

abdomen four-jointed, the joints very short and nearly equal in length; caudal stylets short, quadrate, scarcely longer than broad, sharply angulated at the outer distal edge; bearing one long rigid apical seta and two very small ones. Antennules short and stout, six-jointed, the terminal joint bearing four setæ; mandibles small, consisting of a single stout curved limb without any palp; maxillæ simple, claviform, dilated at the extremity, which bears a few simple sette; anterior maxillipeds bearing a very long and slender terminal claw; posterior similarly formed, but with a much shorter and more robust unguis; three pairs of swimming feet, each with a robust basal joint, and two tri-articulate branches. The siphon is apparently slender and tubular, but was only indistinctly seen. The animal is nearly colourless, except that the alimentary tract is coloured so as to form in the recent condition a brilliant blue cross. Three specimens were taken by A. M. N. in a brackish pool by the side of the stream at Seaton Sluice in June, 1885, but renewed search in the same place has failed to disclose further specimens. The animal is evidently a suctorial one, and doubtless a parasite which in this case had become detached from its host. No species at all nearly corresponding to it has apparently been described. Its nearest allies are probably Cancerilla Dalvell and Botryllophilus Hesse, and it would appear not at all unlikely that the host may prove to be one of the Amphipods or Isopods which abound in salt marshes, or possibly the shore crab. N.

FAM. 3.—ONC.EID.E

ONCÆA ANGLICA G. S. Brady.

1905. Oncea anglica, Brady, On Copepoda and other Crustacea taken off Northumberland and Durham in July, 1904. Trans. Nat. Hist. Soc. Northumberland, Durham, and Newcastle, new series, vol. i., p. 220, pl. vi., figs. 1-9.

One specimen only—a female—was found in washings of dredged material taken between St. Mary's Island and Souter Point (G. S. B.)

N.

FAM. 4.—LICHOMOLGIDÆ

LICHOMOLGUS FUCICOLA G. S. Brady.

1872. Macrocheiron fucicolum, Brady, Nat. Hist. Trans. Northumberland and Durham, vol. iv., p. 434, pl. xviii., figs. 9–18.

1880. Lichomolgus fucicola, Brady (3), vol. iii., p. 41, pl. lxxxv., figs. 1-11.

Found not unfrequently among fuci at and beyond low-water mark, as well as in greater depths among dredged material. Though often found free-swimming, the natural habit of this genus would seem to be symbiotic in the branchial cavities of Ascidians. Our local records are St. Mary's Island, Alnmouth, and Ryhope, among fuci, and in dredgings from four miles off Hawthorn and Marsden in about 25 fathoms (G. S. B.)

PSEUDANTHESSIUS LIBER (Brady and Robertson).

FAM. I.—SPLANCHNOTROPHIDÆ

SPLANCHNOTROPHUS BREVIPES A. Hancock and Norman.

1863. Splanchnotrophus brevipes, A. Hancock and Norman, "On Splanchnotrophus, an undescribed genus of Crustacea parasitic in Nudibranchiate Mollusca." Trans. Linn. Soc., vol. xxiv., p. 55, pl. xvi., figs. 1-6. Two specimens of this species were found by A. Hancock on as many examples of *Eolis rufibranchialis* from Whitley (see Alder and Hancock, Nudibranchiate Mollusca, p. 26), and others from *Doto coronata* from rock pools at Cullercoats by H. T. Mennell and A. Hancock.

Dr. Thomas Scott has described a parasite of *Lomanotus genei* under the name *Lomanoticola insolens*, which is very closely allied to, if not the same as the foregoing (Ann. and Mag. Nat. Hist., ser. 6, vol. xvi., 1895, p. 360, pl. xvii., figs. 1, 2).

FAM. 2.—CHONDRACANTHIDÆ

Chondracanthus Lophii Johnston.
On the angler at Cambois (G. S. B.)

N.

CHONDRACANTHUS ANNULATUS Olsson.

- 1860. Chondracanthus annulatus, Olsson, Prod. faunæ Copep. parasit. Scandinaviæ. Lund. Univ. Arsskift, p. 30, pl. ii., figs. 13–15.
- 1886. Chondracanthus læviraiæ, Valle (A.), Crost. parassit. dei Pesci del Mare Adriatico. Boll. Soc. Adriat. Sc. Nat., vol. vi., p. 73.
- 1900. *Chondracanthus annulatus*, T. Scott, Eighteenth Report Fishery Board for Scotland, p. 164, pl. vii., figs. 46–51.
- 1909. *Chondracanthus inflatus*, Bainbridge (May E.), Notes on some Parasitic Copepoda. Trans. Linn. Soc., ser. 2, vol. xi., p. 47, pl. ix., figs. 9–15.

A single immature specimen found on the gills of *Raia* radiata, North Shields (Miss Lebour).

We cannot doubt that Miss Bainbridge's species is *C. annulatus* of Olsson. We (A. M. N.) have cotypes of that species in our collection, and also cotypes of *Chondracanthus fallidus* received from Prof. E. Van Beneden, which seems to be the same species; but at this moment we fail to call to mind where the description of that author is to be found. N.

FAM. 3.—LERN. EOPODID. E

LERNÆOPODA SALMONEA (Linné).

1850. Lernwopoda salmonea, Baird (1), p. 335, pl. xxxv., fig. 6.

1872. Lernæopeda salmonea, A. Fric, Die Krustenthiere öhmens, p. 214, and woodcut.

1900. Lernecopoda salmonea, T. Scott, Eighteenth Report Fishery Board for Scotland, p. 173, pl. viii., fig. 26.

From the gills of a salmon taken in the Coquet, 1908 (E. L. Gill).

LERNÆOPODA CLUTHÆ T. Scott.

1900. Lernwopoda cluthae, T. Scott, Eighteenth Report Fishery Board for Scotland, p. 173, pl. viii., figs. 27-37.
1909. Lernwopoda cluthae, Bainbridge, loc. cit., p. 49, pl. x., figs. 24-27.

About twelve females were taken from the gills of Raia radiata from North Shields by Miss Lebour.

Brachiella pastinaca P. J. Van Beneden.

1909. Brachiella pastinaca, Bainbridge, loc. cit., p. 50, pl. viii., figs. 6, 7, pl. ix., fig. 8.

A single specimen of what Miss Bainbridge takes to be this species was found by Miss Lebour in the spiracle of the piked dogfish (*Acanthias vulgaris*). The species was added to the British fauna by Mr. T. Scott in 1904.

?Brachiella Parkeri G. M. Thompson.

? 1889. Brachiella Parkeri, G. M. Thompson, Trans. New Zealand Instit., vol. xxii., p. 374, pl. xxviii., fig. 8 a, b. 1909. Brachiella Parkeri, Bainbridge, loc. cit., p. 52, pl. ix., figs. 16, 17, pl. x., figs. 18-23.

"One specimen of what I take to be this species, or one closely allied to it, was obtained by Miss Lebour from the gills of the long-nosed skate (Raia oxyrhynchus)" (Bainbridge).

N.

Anchorella uncinata (O. F. Müller).

Common on the gills of cod and haddock.

N.D.

Anchorella Rugosa Kröyer.

1900. Anchorella rugosa, T. Scott, Eighteenth Annual Report Fishery Board for Scotland, p. 176, pl. viii., figs. 45–48.

1909. *Anchorella rugosa*, Bainbridge, *loc. cil.*, p. 55, pl. x., figs. 28–32, pl. xi., figs. 33–37.

Fairly common on the gills of the catfish (Anarrhichus lupus), North Shields (Miss Lebour).

FAM. 4.—LERNÆIDÆ

LERNÆA BRANCHIALIS Linné.

Common on cod.

ORDER X.—CIRRIPEDIA
SECTION I.—THORACICA
DIVISION I.—OPERCULATA
FAM. I.—BALANIDÆ

BALANUS TINTINNABULUM (Linné). Ship's bottom, Shields (J. Alder).

D.

BALANUS PORCATUS Da Costa.

Common and often very fine off the coast on "Fusi," Modioli, Balanus Hameri, etc. A specimen in Mr. Alder's collection measured 13-in. high and 13-in. wide.

N.D.

BALANUS CRENATUS Bruguiére.

Attached to shells, Modioli, etc., in deep water.

N.D.

BALANUS BALANOIDES (Linné).

Common on rocks between tidemarks.

N.D.

BALANUS' HAMERI (Ascanius).

In deep water attached to shells, sticks, etc. More especially on "Fusi" and Modioli. Magnificent groups sometimes occur; and in such a group in Mr. Hancock's collection one Balanus measured $3\frac{1}{2}$ inches high and $1\frac{1}{10}$ inches broad.

N.D.

FAM. 2.—VERRUCIDÆ

VERRUCA STREMIA (O. Müller).

On Balanus Hameri and porcatus, and on shells.

N.D.

Division 2.—PEDUNCULATA FAM. 3.—LEPADIDÆ

LEPAS ANATIFERA Linné.

On ships' bottoms, etc. A specimen in Mr. A. Hancock's collection measured 10½ inches long, with the capitulum t¼ inches long, and rather more than ¾-inch broad. N.D. LEPAS ANSIFERINA Linné.

On ships' bottoms; a large number of specimens were in Mr. Hancock's collection.

LEPAS FASCICULARIS Ellis and Solander.

In 1857 large numbers of this species were cast up on the shore at Marsden and all along the Whitley sands (fide J. Alder and A. Hancock). In the Newcastle Museum are examples from Tynemouth, August, 1878 (Dr. W. B. Clarke); and a cluster attached to a floating bottle from the Northumberland coast, 1894.

CONCHODERMA AURITA (Linné).

From ship's bottom (A. Hancock).

N.D.

CONCHODERMA VIRGATA (Spengler).

From ship's bottom (A. Hancock).

1X.D.

Scalpellum vulgare Leach.

Common in deeper water attached to branching Polyzoa and Hydroids. N.D.

SECTION II.—CRYPTOSOMATA

Trypetesa lampas (A. Hancock).

1849. Alcippe lampas, A. Hancock, Note on the occurrence on the British coast of a Burrowing Barnacle belonging to a new order of the Class Cirripedia. Ann. and Mag. Nat. Hist., ser. 2, vol. iv., p. 305, pls. viii., ix.

1854. Alcippe lampas, C. Darwin, Mon. Cirripedia, Balanidæ, pp. 530 and 630, pl. xxii.

1903. Trypetesa lampas, Norman, New generic names for some Entomostraca and Cirripedia. Ann. and Mag. Nat. Hist., ser. 7, vol. xi., p. 369. The name *Alcippe* having previously, in 1847, been employed by Blyth for a genus of birds, it has been necessary to change it for the Cirriped.

Burrowing in shells of *Buccinum* and of "Fusi," in deep water off the coasts (A. Hancock and A. M. N.)

N.D.

SECTION III.—RHIZOCEPHALA Fr. Müller.

PELTOGASTER PAGURI H. Rathke.

1843. Peltogaster paguri, H. Rathke, Beiträge zur Fauna Norwegens, p. 245, pl. xii., fig. 17.

1859. *Peltogaster paguri*, Lilljeborg, Les Genres Liriope et Peltogaster (Extr. Nov. Act. Reg. Soc. Sci., Upsala, ser. 3, vol. iii.), p. 25, pl. i., figs. I, 2, pl. ii., figs. 30-55.

1860. Peltogaster paguri, Lilljeborg, Supplément au Mémoire sur les genres Liriope et Peltogaster (Extr. Nov. Acta. Reg. Soc. Sci., Upsala, ser. 3, vol. iii.), p. 11, pl. vii., figs. 19, 20, 22-27.

Parasitic on the abdomen of *Pagurus bernhardus* off Sunderland, 1863 (A. M. N.)

PELTOGASTER SULCATUS Lilljeborg.

1860. Peltogaster sulcatus, Lilijeborg, Supplément au Mémoire sur les genres Liriope et Peltogaster (Extr. des Nov. Act. Reg. Soc. Sci., Upsala, ser. 3, vol. iii.), p. 16, pl. vii., figs. 21-28, pl. viii., figs. 29-38, pl. ix., figs. 39, 40.

Gregariously parasitic on the abdomen of *Anapagurus lævis* off Sunderland, 1863 (A. M. N.)

D.

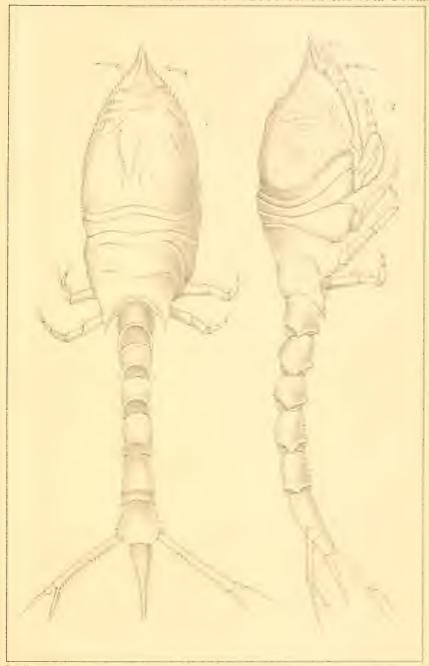

CLISTOSACCUS PAGURI Lilljeborg.

1860. *Clistosaccus paguri*, Lilljeborg, l.c., p. 9, pl. vi., fig. 15, pl. vii., figs. 16–18.

On Anapagurus lævis off Seaham, 1863 (A. M. N.) D.

SACCULINA CARCINI I. V. Thompson.

Occasionally found on Carcinus mænas, and dredged off Berwick in 1863 on abdomen of Portunus holsatus (A. M. N.) N.D.

DESCRIPTION OF PLATES

PLATE VIII.

- Fig. 1. Diastylis Bradii, Norman, female from above.
 - 2. ., from the side

PINICIN.

- Fig. 1. Diastylis Bradii, Norman, male.
 - 2. . female, third maxilliped
 - 3. ,, first peræopod.
 - 4. ,, second peræopod.
 - 5. ,, ,, last peræopod.
 - 6. ,, ,, telson and uropods.

The serration of the lateral line in the figure of the male is too strongly indicated. Differing from that of allied species, it is so minute that it is with difficulty discernible under the microscope.

PLATE IX. (A).

Microcancerilla cceruleocruciata, nov. gen. et sp.

- Fig. 1. Female × 186.
 - 2. Urosome and last thoracic segment × 300.
 - 3. Antennule × 300.
 - 4. Mandible X 500.
 - 5. Maxilla × 500.
 - 6. Anterior maxilliped × 300.
 - 7. Posterior maxilliped × 300.
 - S. One of the swimming feet × 300.

CORRIGENDA

The list of Crustacea of the two counties given on p. 7 has been influenced by additions or otherwise during the publication of the catalogue. The following is a summary of species as now known:—

Brachyura	22	Phyllocarida	I
Anomura	15	Cladocera 4	9
Macrura	22	Ostracoda 12	1
Schizopoda	14	Copepoda 16	9
Sympoda	26	Cirripedia	7
Isopoda	57		_
Amphipoda	131	64	4

Page 112 to 115.—Date of publication of parts of Sars's work quoted should be 1902 (not 1901).

Page 116.—Date of part of Sars's work quoted should be 1903 (not 1901).
